SUMMARY

SUMMARY

EXPERIENCE SUMMARY:

Software Engineer with 4+ years of experience designing and developing scalable enterprise applications and microservices using Java, Spring Boot, Kafka, and AWS/GCP. Skilled in building distributed systems, implementing CI/CD pipelines, and developing real-time streaming and big data processing solutions with Apache Kafka, Spark, and the Hadoop ecosystem. Strong expertise in NoSQL and RDBMS databases, cloud deployments, and Kubernetes. A proactive team player with a focus on performance optimization, problem-solving, and delivering reliable, production-grade software.

EXPERIENCE

Software Development Engineer

Goldman Sachs

Feb '25 — Present

Jersey City, United States

The Expense Management Application enables Goldman customers to raise and manage monthly invoices for their business transactions. It provides a self-service platform where users can assign invoices to analysts, coders, reviewers, and administrators for seamless processing the system.

- Architected and deployed 2 microservices on Google Cloud Platform (GCP) using Cloud Datastore, Memcache, and Task Queues, ensuring service-level independence, scalability, and low-latency inter-service communication.
- Developed secure enterprise web applications using Spring Boot and Angular, integrating OAuth/SAML authentication and remediating vulnerabilities (XSS, CSRF).
- Implemented rules-driven expense validation and approval workflows, enabling configurable business policies without code changes and improving auditability for finance stakeholders.
- Optimized data models, SQL, and query plans for high-volume reporting and reconciliation APIs; ensured portability across AWS RDS/Aurora, Azure SQL, and hybrid-cloud systems. . Built and automated CI/CD pipelines using Jenkins, Helm, and Ansible for Kubernetes-based microservices on GCP, improving release velocity and deployment reliability.
- Enhanced observability and performance using Google Cloud Trace, Datadog, and JProfiler for deep latency analysis and optimization.
- Collaborated cross-functionally with product and QA teams to refine requirements, improve test coverage, and ensure reliable, cloud-native application delivery.

Software Development Engineer

State of Louisiana, Department of Children and Family Services

Mar '24 — Jan '25

United States

Family Services, a centralized portal for managing child and family assistance benefits. Designed and implemented Spring Boot microservices with Kafka for near real-time data streaming, ensuring high availability, disaster recovery, and externalized configuration via Spring Cloud Config. Integrated a responsive Angular UI with secure RESTful APIs to deliver a scalable and seamless onboarding experience for residents.

- Architected and implemented a Spring Boot-based Kafka Producer application to stream near real-time data, ensuring high availability, fault tolerance, and disaster recovery across distributed brokers.
- Optimized Kafka performance by configuring partitions, replication factors, and thread pools to handle high-volume message streams efficiently.
- Externalized microservice configurations via Spring Cloud Config Server, enabling dynamic environment management and reduced deployment errors.
- Developed RESTful APIs using Spring MVC and Spring Data JPA, integrating with relational databases for persistent and transactional data processing.
- Benchmarked and tuned system throughput, achieving sustained ingestion of 5,000+ records every 30 seconds with efficient resource utilization.
- Enhanced observability with Spring AOP and Logback, implemented Swagger for API discovery, and adopted JUnit TDD to ensure code reliability.
- Contributed to Angular 7 frontend components, adding features such as search, pagination, validation, and reusable custom directives for responsive UI.
- Collaborated across teams using uDeploy, JIRA, and Confluence, streamlining CI/CD deployment and documentation processes.

Graduate Teaching Assistant

University of North Carolina at Greensboro

Jan '23 — Aug '23

Greensboro, United States

- Worked closely with faculty to support IT-enabled learning for entrepreneurship and family business courses, including reviewing and evaluating undergraduate student assignments.

- Assisted with administrative and operational tasks by conducting research on digital tools, technology trends, and systems relevant to entrepreneurship programs and academic conferences.
- Created and managed professional presentation materials for conferences, while also providing IT support for technical issues such as network connectivity and system setup.

Graduate And Teaching Assistant

University of North Carolina at Greensboro

Aug '22 — Dec '22
Greensboro, United States

- Conducted C programming lab sessions for undergraduate students, helping them strengthen both conceptual understanding and hands-on skills.
- Supported students in resolving assignment-related difficulties by offering clear and focused guidance.
- Maintained class attendance records and assessed student assignments, ensuring accurate and timely evaluation.

Java Consultant

Vadini Infocenter Pvt Ltd

Jun '21 — Jul '22
Pune, India

Developed and enhanced ServiceNow modules including Incident, Problem, and Change Management, building dynamic AngularJS + Bootstrap frontends and implementing backend logic with Business Rules, Script Includes, and server-side APIs. Automated complex workflows using Flow Designer, Scheduled Jobs, and Script Actions to reduce manual processes. Integrated third-party systems via REST APIs, handling data transformation, authentication, and error management for seamless cross-platform communication.

- Developed and customized ServiceNow modules such as Incident, Problem, and Change Management, enhancing functionality and UI efficiency through AngularJS, Bootstrap, and UI Policies/Actions.
- Implemented backend logic using Business Rules, Script Includes, and server-side APIs, ensuring reliable data flow and robust business process automation.
- Automated complex workflows with Flow Designer, Scheduled Jobs, and Script Actions, significantly reducing manual interventions across departments.
- Integrated third-party systems via REST APIs, handling data transformation, authentication, and error management for seamless bi-directional communication.
- Collaborated with cross-functional teams to gather requirements, build responsive interfaces, and deploy compliant full-stack ServiceNow solutions.
- Resolved data ingestion issues by refining front-end logic (AngularJS/JavaScript) and backend mappings (Script Includes, Transform Maps).
- Delivered documentation and training to developers and end-users, promoting maintainable code practices and smoother platform adoption.

EDUCATION

Masters in Information of Technology and Management in Information Technology and Management, University of North Carolina at Greensboro (GPA: 3.94)

Aug '22 — Dec '23
Greensboro, United States

SKILLS

Programming Languages Java 8+, J2EE, SQL, PL/SQL, JavaScript, TypeScript, HTML5, CSS3, Node.js
Frameworks & Libraries Spring Boot, Spring MVC, Spring Data JPA, Spring Security, Hibernate, RESTful & SOAP Web Services
Messaging & Microservices Microservices Architecture, Apache Kafka, RabbitMQ
Cloud & DevOps AWS (EC2, S3, RDS, Lambda, CloudWatch), Azure SQL, Google Cloud Platform (GCP), Docker, Kubernetes (K8s), Terraform, Helm, CI/CD (Jenkins, GitHub Actions)
Databases & Security Oracle, MySQL, PostgreSQL, MongoDB, Cassandra, Redis, Fortify, OAuth, SAML, Maven, Gradle, Git, GitHub, GitLab, ELK Stack (Elasticsearch, Logstash, Kibana), Prometheus, Grafana, Jaeger, Logback, Splunk, Swagger/OpenAPI, Postman, IntelliJ IDEA, Eclipse, JIR, Confluence
Languages English
