

AMULYA PITTALA

pittalaamulya999@gmail.com | +1 (205) 515-0778 | Birmingham, AL

PROFESSIONAL SUMMARY

Insight-driven **Data Analyst with 4 years of progressive experience** in transforming complex datasets into actionable insights and strategic recommendations across technology, finance, and marketing domains. Proficient in **SQL, Python, Power BI, and Azure Data Factory**, with expertise in building automated ETL pipelines, developing scalable dashboards, and performing statistical and predictive analyses to support data-driven decision-making. Adept at collaborating with cross-functional teams to enhance data quality, streamline reporting, and deliver measurable business impact using **Snowflake, SQL Server, and cloud data engineering tools**.

CORE SKILLS

Programming & Analytics: Python (Pandas, NumPy, Matplotlib, Seaborn), SQL, R

Data Visualization: Power BI, Tableau, Excel (Pivot, Macros), Looker

Databases & ETL: SQL Server, Snowflake, MySQL, PostgreSQL, SSIS, Azure Data Factory

Cloud & Big Data: Azure Synapse, Azure Data Lake, AWS S3, Redshift, PySpark

Statistical Methods: Regression, A/B Testing, Hypothesis Testing, Time Series Forecasting

Other Tools: GitHub, Jira, Confluence, Agile Scrum

PROFESSIONAL EXPERIENCE

Merkle Inc. | Data Analyst | Jun 2025 – Present | Dallas, TX

- Designed and implemented **Power BI dashboards** tracking multi-channel campaign performance, customer segmentation, and ROI metrics for executive stakeholders.
- Built automated **Azure Data Factory pipelines** to ingest and clean marketing and sales data from 5 sources, cutting manual reporting time by 40 %.
- Wrote optimized **SQL stored procedures** and window functions for aggregating billions of records with sub-second query latency.
- Partnered with cross-functional teams to define **KPIs and data governance rules**, ensuring a single source of truth across departments.
- Utilized **Python (Pandas + Matplotlib)** to build trend and forecast models that improved budget planning accuracy by 15 %.
- Migrated legacy Excel reporting to **Power BI Service workspaces** with row-level security and refresh scheduling.
- Conducted **root-cause analysis** on data discrepancies between Azure Synapse and Snowflake, enhancing data integrity checks by 30 %.
- Presented quarterly insight decks to directors highlighting customer growth, cost trends, and campaign conversion drivers.

3i Infotech | Reporting Analyst | Jan 2021 – Jul 2023 | Hyderabad, India

- Developed interactive **Power BI dashboards** for operations and finance, tracking real-time KPIs on cost centers and service delivery.
- Automated data integration between on-prem SQL Server and Azure Synapse using **ETL packages and Python scripts**.
- Created parameterized SQL reports for C-suite stakeholders, reducing manual data processing time by 50 %.
- Enhanced data accuracy through **data profiling and validation frameworks**, eliminating ~25 % of duplicate records.
- Coordinated with data engineers to standardize naming conventions and metadata documentation for governance compliance.
- Leveraged **Excel VBA automation** to compile weekly SLA and incident trend reports, accelerating turnaround by 60 %.
- Supported financial forecasting efforts with Python statistical libraries, identifying variance drivers and outliers.
- Presented bi-weekly data insight summaries to management to drive resource optimization initiatives.

Sasken Technologies | Data Intern | Jan 2020 – Dec 2020 | Hyderabad, India

- Assisted senior analysts in **data collection and cleansing** for product performance and QA analytics projects.
- Built **Tableau dashboards and Excel pivot reports** to visualize testing defect trends and resource utilization.
- Used **Python and SQL** to aggregate log data and highlight inefficiencies in software testing cycles.
- Conducted ad-hoc analyses to identify release bottlenecks, contributing to a 12 % faster deployment timeline.
- Documented query scripts and dashboard procedures in Confluence to improve team knowledge transfer.
- Collaborated with QA and engineering teams to standardize data capture templates for post-release reporting.

EDUCATION

University of Alabama at Birmingham — Master of Science in Computer Science (GPA 3.41) | May 2025

St. Martin's Engineering College — Bachelor of Technology in Information Technology | Aug 2017 – Jun 2021

CERTIFICATIONS

- Fundamentals of Machine Learning with Python Implementation (AZ-104)
- HTML5 – Basics to Advanced
- Microsoft Azure Fundamentals (AZ-900)

PROJECT HIGHLIGHTS

- Customer Segmentation Model:** Applied unsupervised machine learning (k-means) on transaction data to segment customers, improving targeting accuracy by 20 %.
- ETL Automation Pipeline:** Orchestrated data ingestion from five business systems using Azure Data Factory and SQL, reducing manual reporting time by 45 %.
- Sales Forecast Dashboard:** Developed Power BI forecast visuals using DAX measures to predict quarterly revenue with a ± 8 % variance.
