

SAI MUDRAGADA

Clinical Data Analyst

Washington, DC | (678)823-5596 | saimudragada1@gmail.com | [LinkedIn](#) | [Git](#) | [Portfolio](#)

SUMMARY

Clinical Data Analyst with 3+ years of experience translating clinical workflows into scalable SQL logic for digital pharmacy and payer ecosystems. Expert in independently optimizing complex queries and mapping ICD-10/NDC standards to embed decision logic, ensuring data accuracy and driving continuous product improvement.

TECHNICAL SKILLS

Healthcare Standards & Clinical Logic: ICD-10, CPT, SNOMED, LOINC, NDC (National Drug Code), GPI, HEDIS Quality Measures, MA Star Ratings, HCC Risk Scoring, EHR Data Integration (HL7/FHIR concepts), Claims Adjudication logic.

Languages & Databases: Advanced SQL (Complex Joins, Window Functions, Stored Procedures), Python (Pandas, NumPy, Scikit-learn, spaCy), Databricks (Lakehouse), Snowflake, Oracle, MS SQL Server, T-SQL.

Visualization & Cloud Platforms: Microsoft Power BI (DAX, Power Query), Tableau, Microsoft Azure (Data Factory, Synapse), AWS (S3), Excel (Advanced Macros/VBA), Jira

EXPERIENCE

Cigna Healthcare Jan 2025 - Present
Clinical Data Analyst Austin, TX (Remote)

- Improved clinical cohort identification accuracy by 95% and reduced manual review cycles for intervention programs by engineering complex SQL queries that mapped ICD-10 diagnosis codes and CPT procedure standards to NDC formulary data, effectively translating clinical guidelines into automated logic.
- Identified \$2M+ in cost optimization opportunities and informed clinical intervention strategies by analyzing 2.5M+ specialty pharmacy and Part D claims records using SQL (Databricks) and Python to perform member cohort segmentation.
- Reduced supply chain incidents by 30% and optimized pharmacy operations by analyzing drug distribution patterns and formulary utilization across 50+ clients using automated validation logic to track product performance.
- Improved operational efficiency by 40% and enabled scalable self-service analytics by migrating 1,000+ legacy reporting systems to cloud-native Power BI and Tableau dashboards leveraging Databricks pipelines.
- Supported \$5M+ in strategic initiatives and accelerated product decision-making by translating complex clinical requirements into advanced SQL specifications across provider, claims, and eligibility data models.

CitiusTech Jan 2022 - Dec 2023
Healthcare Data Analyst Hyderabad, India

- Drove a 35% increase in negotiation success rates and prioritized high-risk claims by building predictive models in Python (Scikit-learn) that analyzed 250K+ records with 90% accuracy.
- Improved care gap closure rates by 18% and supported a 0.4-point MA Star rating improvement by delivering actionable HEDIS quality measures and KPIs via interactive Power BI dashboards.
- Cut claim review time by 60% while maintaining 92% diagnostic accuracy by collaborating on an NLP-based extraction project (spaCy, NLTK) to automate HCC risk scoring from unstructured clinical documentation.
- Decreased data processing time by 30% and reduced manual review cycles by developing automated SQL workflows on Azure infrastructure to process claims and operations data for quality assurance teams.
- Enabled real-time analytics for care management by designing SQL queries and ETL workflows integrating EHR and claims data from multiple sources across 12 regional markets.

CRED Jan 2021 - Dec 2021
Associate Data Analyst Hyderabad, India

- Reduced fraud incidents by 40% and improved transaction security by implementing real-time anomaly detection frameworks using SQL pattern analysis and Python-based risk scoring models.
- Ensured 100% revenue recognition accuracy and mitigated commission leakage by reconciling high-volume payment gateway transactions daily across multiple bank partners using complex SQL joins.
- Improved collections recovery rate by 35% and reduced delinquency costs by building data-driven strategies through statistical analysis of repayment patterns and customer segmentation using Python.

EDUCATION

Midwestern State University Jan 2024 - Dec 2025
Master's in Business Analytics (STEM)

- Relevant Coursework : Data Mining, Database Management, Predictive Analytics.
- Authorized to work in the US, no sponsorship required
