Education

Arizona State University, Masters of Science - Information Technology

Aug 2022 - May 2024

RCOEM, Bachelors of Engineering - Electronics with Minor Computer Science

Aug 2019 - June 2022

Work History

Eventeny - Software Engineer

Aug 2024 - Present

- Developed RESTful APIs using Java Spring Boot to handle high-traffic vendor and ticket management requests, significantly improving system efficiency and reducing API response time by 28% during peak loads.
- Implemented AWS Lambda with API Gateway to offload event-related backend operations, effectively reducing server load and ensuring smooth, high-volume ticket purchases during peak hours.
- Rebuilt React.js components for the event dashboard, enhancing frontend performance and making real-time data visualization 30% faster and more interactive for event organizers.
- Automated invoice reminders using backend cron jobs, reducing manual follow-ups by 46% for event staff, leading to more predictable and timely vendor payments.
- Optimized MySQL queries in financial reports, reducing query execution time by 30ms per transaction, making invoice calculations faster and more efficient for event organizers.
- Integrated AWS CodePipeline with Jenkins, streamlining the CI/CD process, enabling faster, automated, and more reliable deployments with 29% reduced downtime across services.

Volvo Group - Software Engineer Intern

Jan 2024 - May 2024

- Designed UI prototypes in Figma, streamlining the visualization of data dashboards and ensuring a user-friendly experience.
- Automated approval workflows using Power Automate, reducing manual processing time by 53% and enhancing operational efficiency.
- Developed APIs in Java (Spring Boot) to handle fleet maintenance requests, improving data retrieval efficiency by 25%.
- Built React.js dashboards for tracking vehicle maintenance schedules, providing fleet managers real-time updates, reducing downtime by 21%.
- Optimized PostgreSQL indexing for fleet reports, improving query execution speed by 42%, allowing instant retrieval of vehicle status.
- Migrated legacy VBA scripts to Python, mitigating five security vulnerabilities and ensuring regulatory compliance.
- Built real-time fleet monitoring dashboards using Power BI and Tableau, integrating SQL queries and REST APIs to provide data-driven insights for predictive maintenance.
- Designed and optimized RESTful APIs using .NET Core, reducing query response time by 28%, enhancing data flow efficiency, and enabling scalable data processing to support increasing transaction loads.

Discount Tire - IT Intern

May 2023 - Aug 2023

- Restructured MongoDB indexing and schema design, improving real-time inventory tracking and accelerating sensor data retrieval by 32%.
- Developed Java microservices to process TPMS sensor data, improving real-time diagnostics and preventing tire failures.
- Implemented AWS CloudFormation to automate infrastructure provisioning, reducing setup time for testing new features.
- Implemented an Elasticsearch-based search feature, allowing real-time query execution on large datasets, improving diagnostics accuracy.
- Built React.js dashboards for service technicians, allowing them to retrieve tire health insights 2x faster.

Verzeo - Full Stack Engineer

Jul 2020 - June 2022

- Refined React.js frontend interfaces, ensuring responsive UI and fast load times, improving user engagement by 27%.
- Developed React.js frontend for an AI-driven customer segmentation tool, improving user engagement by 27%.
- Built Java Spring Boot APIs to support real-time marketing insights, increasing system performance and handling 38% more traffic.
- Enhanced PostgreSQL database queries, improving efficiency in data retrieval and business operations.
- Integrated GraphQL APIs to optimize data fetching, reducing payload size and improving frontend rendering speeds.
- Automated deployment pipelines using Docker and Kubernetes, reducing deployment time and ensuring high availability.

Projects

Bank Loans UI ([Github](#))

- Developed a Node.js backend to manage bank loan data in a MongoDB Atlas cloud database using Prisma ORM.
- Utilized Node.js, JavaScript, Prisma, and MongoDB.

Bank Loans Backend([Github](#))

- Constructed a dynamic user interface and seamlessly connected to Bank Loans Backend REST APIs.
- Enabled CRUD operations on MongoDB Atlas-hosted loan data and utilized React, JavaScript, HTML, and CSS.

Music Records Database Design ([Github](#))

- Designed a relational database for music records, featuring SQL Server with triggers and procedures, and NoSQL.
- Utilized NORMA, SQL Server, Couchbase, and Azure Data Studio.
