

EXPERIENCE

UL Solutions, US | Software Engineer Intern | May 2024 – Aug 2024 and June 2023 – July 2023

- Built and fine-tuned unit tests for Python apps, cutting down bugs by 20% and making the system way more reliable.
- Led regular code reviews and pair programming sessions, spotting key areas to improve code quality and reduce deployment hiccups.
- Set up and managed cloud infrastructure on AWS (EC2, S3), and automated deployments with CI/CD pipelines using CodePipeline, slashing deployment time by nearly half.
- Overhauled project docs in Confluence and GitHub Wikis, putting together easy-to-follow installation guides and onboarding materials that helped new teammates get up to speed 30% faster.
- Ran daily Agile/Scrum meetings (sprint planning, stand-ups, retros) to keep projects on track and delivered on time.
- Tackled production issues head-on by adding better logging and automation tools, cutting debugging time in half.

Cognizant, India | Software Engineer | May 2020 – June 2022

- Built and maintained RESTful APIs (Python Django, Node.js, .NET) to boost client system compatibility and cut latency to under 200ms.
- Polished React.js components with TypeScript, making interfaces snappier and performance jump by ~78%.
- Built and fine-tuned .NET microservices that scaled smoothly and cut server load by ~75%.
- Streamlined data workflows using NumPy, saving 5 hours/month on manual work and boosting accuracy by 80%.
- Integrated Stripe payment gateways into a microservices platform, skyrocketing transaction success rates by 70%.
- Set up Jenkins CI/CD pipelines for two projects, slashing deployment downtime by 85%.
- Managed Kubernetes deployments to optimize resources and reliability, cutting production errors by 75% with real-time Grafana alerts.
- Optimized SQL queries and migrated a legacy database to PostgreSQL, making queries 80% faster for a banking client's reporting system.

TECHNICAL SKILLS

- **Programming & Scripting:** Python, Java, JavaScript, TypeScript, Node.js, .NET, HTML5, CSS3
- **Frameworks & Libraries:** React.js, Django, NumPy, Pyfhel (BFV Homomorphic Encryption)
- **Databases:** PostgreSQL, SQLite
- **Cloud & DevOps:** AWS (EC2, S3, CodePipeline, Solutions Architecture – Associate), Kubernetes, Jenkins CI/CD, Grafana, Infrastructure as Code (IaC)
- **Version Control & Collaboration:** Git, GitHub, Confluence, Figma (UI/UX Prototyping)
- **Payments & Integrations:** Stripe (microservices-based e-commerce integration)
- **Methodologies:** Agile/Scrum (sprint planning, daily stand-ups, retrospectives)

PROJECTS

Secure Electronic Voting System using BFV Homomorphic Encryption | Master's Project

- Developed a secure online voting platform with Django, integrating authentication, encrypted vote storage, and automated tallying for 1,000+ users. Leveraged Python, HTML5, CSS3, and JavaScript, boosting engagement by 25%.
- Implemented BFV Homomorphic Encryption (Pyfhel) for confidential vote tallying while ensuring privacy and integrity.
- Designed responsive, accessible dashboards with Django templates and CSS, enhancing real-time result visualization and reducing admin overhead by 30%.
- Utilized SQLite for secure data storage and efficient encryption key management, ensuring scalability.
- Used Figma to create intuitive UI/UX prototypes, improving usability and development workflow.

EDUCATION

- **Master's in computer science** | California State University, Sacramento, CA
- **Bachelor's in computer science** | Acharya Nagarjuna University, India

CERTIFICATIONS

- AWS: Solutions Architecture – Associate
- LinkedIn Learning: Big Data in the Age of AI, HTML, CSS, Python Object – Oriented Programming.
