CAREER SUMMARY

Passionate Full Stack Java Developer with 5+ years of experience in designing and developing scalable applications using Java (8-17), Spring Boot, and AWS. Skilled in building microservices, RESTful APIs, and cloud deployments with AWS. Adept at Agile methodologies, TDD, and implementing security best practices for high-performance, secure applications.

TECHNICAL SKILLS

Programming & Core Java Technologies: Java, J2EE (Servlets, JSP, JSTL, JDBC, EJB), Multi-threading

Web & Application Servers: Oracle WebLogic, IBM WebSphere, JBoss, Tomcat

Web Technologies: HTML5, CSS3, JavaScript, Angular (6, 12, 17)

Web Services: REST, SOAP, Microservices

Cloud & Database Technologies: AWS (Lambda, S3, RDS, API, Elastic Beanstalk, CloudWatch, CodePipeline, CodeDeploy, ELB, EC2, IAM, CloudFormation), MySQL

Big Data & Distributed Computing: Hadoop, Spark, MapReduce, HDFS, Cassandra, MongoDB

Message Brokers: Kafka, RabbitMQ, ActiveMQ

Development Tools & IDEs: Eclipse, Spring STS, IntelliJ

Build & Version Control: Maven, Gradle, Git, Bitbucket

Methodologies: Agile (Scrum, TDD), SDLC, Waterfall

Spring Framework & Microservices: Spring MVC, Spring Boot, Spring Cloud (Eureka, Security, REST, Microservices, AOP, JDBC, JTA, IOC, IO)

WORK EXPERIENCE

Full Stack Java Developer | Ruri Software Technologies (Client: Nielsen) | Irving, Texas

JUL 2024 – Present

- Built and optimized scalable, mission-critical web applications using Java (17), Spring Boot, and Hibernate, boosting data processing speeds by 30%.
- Designed and implemented a microservices architecture with Spring Cloud and Spring Eureka, ensuring high availability and scalability across distributed systems.
- Developed and exposed RESTful APIs with Spring MVC, integrating authentication and authorization using Spring Security, reducing security vulnerabilities by 40%.
- Designed and implemented Angular (17) front-end applications, integrating with microservices to deliver seamless user experiences.
- Utilized AWS Lambda for building serverless functions to handle asynchronous tasks, such as data processing and event triggers, reducing infrastructure costs by 20%.
- Implemented AWS S3 for storing application assets, such as logs and static files.
- Configured AWS RDS (Relational Database Service) for managing MySQL databases, improving scalability, reliability, and reducing manual maintenance.
- Leveraged AWS API Gateway to expose secure, scalable RESTful APIs and integrated with Lambda functions for dynamic data processing.
- Orchestrated containerized applications using Docker and Kubernetes, ensuring smooth scalability and minimal downtime during deployments.
- Designed and implemented asynchronous data pipelines using Apache Kafka for real-time data streaming, improving message processing efficiency by 35%.
- Utilized RabbitMQ as a message broker for efficient inter-service communication in a distributed environment, reducing system latency by 20%.
- Configured Redis as a caching layer, reducing database load and improving API response times by 50%.
- Performed database schema design and optimized queries using MySQL and PostgreSQL, improving query execution time by 40%.
- Designed and implemented Terraform modules for AWS infrastructure, ensuring repeatable and scalable deployments.
- Implemented logging and monitoring solutions using Log4j and ELK Stack to track system metrics and proactively identify issues.
- Developed test cases with JUnit, Mockito, and Cucumber, ensuring 90% code coverage and adhering to Test-Driven Development (TDD) practices.

Java Developer | IBS Software | India

JUN 2018- AUG 2022

- Designed and implemented an advanced air cargo management system for Turkish Airlines using J2EE technologies (Java 8, 11, 14) and Microservices architecture, ensuring high availability and fault tolerance with Spring Boot and Spring MVC.
- Built Angular front-end components that dynamically integrated with Spring Boot backends, improving UX and reducing load times by 30%.
- Collaborated with stakeholders in Agile sprints to gather requirements, refine user stories, and deliver shippable features within sprint deadlines, achieving 95% on-time delivery for releases.
- Designed and implemented DAO (Data Access Object) layers using Hibernate to interact with MySQL databases, optimizing CRUD operations and improving query performance by 30%.
- Utilized EJB (Enterprise Java Beans) to implement business logic and handle transaction management, ensuring secure and consistent execution across distributed services.
- Developed reusable APIs and business workflows using Spring MVC controllers and service layers, reducing code duplication by 20% and improving maintainability.
- Wrote efficient Hibernate HQL (Hibernate Query Language) queries to handle complex joins and bulk data processing, improving database response times for air cargo operations by 25%.
- Implemented database schemas and migrations using JPA annotations and optimized persistence logic for MySQL, reducing application startup time and improving transaction performance.
- Configured and maintained Spring Security to enforce authentication and role-based access control (RBAC), reducing unauthorized access incidents by 40%.
- Integrated Spring AOP (Aspect-Oriented Programming) to implement cross-cutting concerns like logging, caching, and performance monitoring, streamlining application workflows.
- Participated in daily stand-ups, sprint planning, and retrospective meetings to ensure alignment with project goals and actively contributed to sprint backlog grooming.
- Created RESTful APIs using Spring Boot and integrated them with front-end systems, ensuring seamless data transfer and real-time updates for cargo operations.
- Built and consumed SOAP Web Services to integrate with legacy systems, ensuring compatibility and extending the system's functionality.
- Designed optimized database schemas and indexes in MySQL, enabling faster data retrieval and reducing query execution time for cargo processing reports.
- Automated deployment pipelines using Jenkins and Maven, ensuring faster builds and error-free deployments across development, staging, and production environments.
- Conducted extensive unit testing and integration testing using JUnit, Mockito, and Cucumber, maintaining 90% test coverage and ensuring high-quality deliverables.
- Created and maintained complex stored procedures, triggers, and functions in MySQL, streamlining repetitive operations and improving database performance.

LEADERSHIP & MENTORING EXPERIENCE:

MAR 2022 - AUG 2022

- Conducted comprehensive training sessions for a batch of 15 new recruits, providing them with in-depth knowledge of project workflows, technologies, and best practices.
- Played a key role in mentoring trainees to achieve successful project deployments. Collaborated to troubleshoot issues, optimize performance, and meet project milestones.
- Mentored developers in debugging and troubleshooting complex Java and Spring Boot applications, using logging frameworks like Log4j and monitoring tools to track and fix production issues.

EDUCATION

University of North Texas | Denton, TX

Master of Science, Artificial Intelligence

May 2024

GPA: 4.0/4.0

CMR College of Engineering & Technology| Telangana, India

Bachelor of Technology, Electronics & Communication Engineering (JNTUH accredited)

MAY 2018

CGPA: 8.98/10
