

Venkata Kunisetty
Java Full Stack Developer
Venkatakunisetty6@gmail.com
+1 2148692215

PROFESSIONAL SUMMARY:

Experienced IT professional with a strong background in web application development and deployment. With expertise in Java 8, Spring Boot, React.js, Microservices, MongoDB, and AWS. Proficient in REST API, Docker, Jenkins, and NoSQL databases. Skilled in Java, Hibernate, and Spring frameworks for building robust applications. Familiar with Agile, DevOps, and CI/CD practices. Proven ability to collaborate in cross functional teams and deliver effective technical solutions. Excellent communication skills and a passion for staying up to date with emerging technologies.

TECHNICAL SUMMARY:

Technologies	Java, Python, ReactJS, JavaScript, Bootstrap, NodeJS, Next.js, Express.js.
Data bases	MySQL, Oracle, MongoDB, Firebase, SQL, PostgreSQL, Cassandra.
Cloud Console Services	S3, ECS, EC2, EMR clusters, Lambdas, Cloud Watch
Other Tools	Git, Bitbucket, Log4J, MS-Office, JIRA, DOM, SQL Developer, Cordova, Maven, Kafka, Splunk, Docker, JMeter, Redux, ServiceNow, Jenkins, Tomcat, GraphQL, Kubernetes, Sonar.

PROFESSIONAL EXPERIENCE:

Client: Fidelity Investments
Role: Web Developer

April 25 - Current

Responsibilities

- Involved in Analysis, Design, and Implementation of APIs & software applications using **Java 8 / Springboot2 / Rest API, Docker, AWS, NoSQL, Jenkins, Docker, Microservices, Spring MVC, JPA, JSF** and Web services (SOAP, REST). Implemented few front-end modules using React.js, JavaScript and integrated with Microservices and spring boot-based middleware layer.
- Extensive experience in the design and architecture of JEE applications, employing Spring MVC, Hibernate, and EJB Java Persistence API (JPA) for robust and maintainable solutions.
- Expertise in State Management using Context API to manage global state efficiently.
- Skilled in implementing Material UI (MUI) for modern, responsive, and accessible UI components.
- Strong understanding of React Hooks (useState, useEffect, useContext, useReducer) for functional component-based development.
- Strong understanding of React.js and implemented advanced features such as lazy loading, dynamic forms, routing guards, and interceptors to optimize application performance and enhance user experience.
- Strong experience in developing RESTful APIs and experience with web services such as SOAP and REST.
- Collaborated on the design, development, and deployment of services on AWS EC2 instances, utilizing S3 for efficient file storage and AWS Lambda for serverless computing.
- Developed front-end modules using ReactJS, and JavaScript, integrating them with back-end Microservices to create responsive and user-friendly interfaces.
- Integrated the service with DynamoDB for streamlined data management and established automated alarms using CloudWatch to ensure seamless system monitoring.
- Collaborated with QA teams to implement Cypress plugins for advanced debugging and reporting of test results.
- Utilized Cypress for cross-browser testing, improving application compatibility across multiple platforms and devices.
- Led a team of 5 developers in delivering a scalable and high-performance web application using Java 8, Spring Boot, and Angular 6, reducing the page loading time by 30%.
- Optimized database queries and reduced average response time by 40%, resulting in a more efficient data retrieval process.
- Built and deployed containerized applications using Docker, optimizing deployment processes and enabling seamless scalability across environments.
- Experience working with API management and performance optimization in HRT environments.

Tool Stack: Java, Servlets, Spring, React.js, XML, CSS, JavaScript, MVC, HTML, AWS, Junit, Oracle, Jenkins.

Client: Comcast
Role: Java Full Stack Developer

August 22 - April 25

Responsibilities

- Involved in Analysis, Design, and Implementation of APIs & software applications using **Java 8 / Springboot2 / Rest API, Docker, AWS, NoSQL, Jenkins, Docker, Microservices, Spring MVC, JPA, JSF** and Web services (SOAP, REST). Implemented few front-end modules using React.js, JavaScript and integrated with Microservices and spring boot-based middleware layer.
- Developed Hibernate persistence layer modules using EJB Java Persistence API (JPA) annotations and Entity Manager with Hibernate and performed configuration of Struts Application Framework.
- Proficient in TypeScript and deep knowledge of React.js architecture, components, directives, services, and dependency injection.
- Extensive experience in the design and architecture of **JEE** applications, employing **Spring MVC, Hibernate, and EJB** Java Persistence API (JPA) for robust and maintainable solutions.
- Expertise in **State Management** using **Context API** to manage global state efficiently.
- Skilled in implementing **Material UI (MUI)** for modern, responsive, and accessible UI components.
- Strong understanding of **React Hooks** (useState, useEffect, useContext, useReducer) for functional component-based development.
- Strong understanding of React.js and implemented advanced features such as lazy loading, dynamic forms, routing guards, and interceptors to optimize application performance and enhance user experience.
- Strong experience in developing **RESTful** APIs and experience with web services such as **SOAP** and **REST**.
- Collaborated on the design, development, and deployment of services on AWS EC2 instances, utilizing S3 for efficient file storage and AWS Lambda for serverless computing.
- Developed front-end modules using **ReactJS**, and **JavaScript**, integrating them with back-end Microservices to create responsive and user-friendly interfaces.
- Integrated the service with **DynamoDB** for streamlined data management and established automated alarms using CloudWatch to ensure seamless system monitoring.
- Collaborated with QA teams to implement Cypress plugins for advanced debugging and reporting of test results.
- Utilized Cypress for cross-browser testing, improving application compatibility across multiple platforms and devices.
- Led a team of 5 developers in delivering a scalable and high-performance web application using Java 8, Spring Boot, and Angular 6, reducing the page loading time by 30%.
- Optimized database queries and reduced average response time by 40%, resulting in a more efficient data retrieval process.
- Built and deployed containerized applications using Docker, optimizing deployment processes and enabling seamless scalability across environments.
- Experience working with API management and performance optimization in Vert.x-based environments.

Tool Stack: Java J2EE, C++, Java SE, Servlets, Spring, React.js, XML, CSS, JavaScript, MVC, HTML, AWS, Junit, Oracle.

Client: Wipro Technologies
Role: Java Full Stack Developer

September 20 – August 21

Responsibilities

- Led the analysis, design, and implementation of robust software applications using **Java 8, Spring Boot 2, Rest API, Mongo DB, Docker, AWS, NoSQL, Jenkins, SQL PostgreSQL, and Web services (SOAP, REST)**, resulting in a 20% increase in application performance.
- Implemented **J2EE design patterns** like Singleton and Session Façade.
- Spearheaded the development of APIs and software applications using **React.js, Spring Boot, Java 8, Microservices, SQL**, Analytics, and Data Management. Integrated front-end modules using Angular 9 with Microservices and Spring Boot middleware, resulting in a 30% reduction in response time.
- Strong understanding of **Microservices** architecture and design patterns, and experience in building Microservices-based applications using technologies such as **Spring Boot, Docker, Kubernetes, and Apache Kafka**.
- Developed Hibernate persistence layer modules using EJB **Java Persistence API (JPA)** annotations and Entity Manager.
- Employed **Selenium** for landing page testing, A/B testing, and end-to-end testing automation, resulting in a 40% reduction in manual testing efforts.
- Familiarity with **React Router** for dynamic and nested route handling.
- Adept at writing reusable components and maintaining a scalable **component-based architecture**.
- Experience with **Form Handling & Validation** using **React Hook Form** and **Yup**.
- Extensive experience in the design and architecture of **JEE** applications, employing Spring MVC, Hibernate, and EJB Java Persistence API (JPA) for robust and maintainable solutions.

- Involved in coding, code reviews, **Junit testing**, Prepared and executed Unit Test Cases.
- Implemented **AWS** Identity and Access Management (**IAM**) to manage user access and ensure security compliance.
- Developed and deployed cloud-based applications on **AWS** using services like **EC2, S3, Lambda, DynamoDB**, and **CloudWatch** which improved application scalability by 40%, allowing seamless handling of peak loads.
- Developed front-end modules using **ReactJS**, and **JavaScript**, integrating them with back-end Microservices to create responsive and user-friendly interfaces.
- Implemented and used Web Services with the help of **REST, SOAP** to get updates from the third parties.
- Used **Log4j** for External Configuration Files and debugging.
- Built data pipelines using Hadoop and MapReduce, enabling the efficient processing of unstructured and semi-structured data for real-time analytics.
- Deployed Hadoop clusters for distributed computing, optimizing resource management and enhancing performance for large-scale applications.
- Collaborated with QA teams to implement **Cypress plugins** for advanced debugging and reporting of test results.
- Utilized Cypress for cross-browser testing, improving application compatibility across multiple platforms and devices.
- Built and deployed containerized applications using Docker, optimizing deployment processes and enabling seamless scalability across environments.
- Designed and optimized **Oracle** and **MySQL** database tables and utilized Stored Procedures, enhancing application efficiency by 20%.
- Proficiency in using build tools such as **Maven** and **Gradle** for automation and management of project dependencies.
- Good understanding of **Agile methodologies**, and experience working in Agile development teams.

Technology Stack: Java J2EE, Java SE, Servlets, Spring, CSS, Java Script, Swing, HTML, Hibernate, Oracle.

Client: Verizon, Chennai, India

December 19 - August 20

Role: Java Developer (Campus Commune)

Responsibilities:

- Involved in Analysis, Design, and Implementation of software applications using **Java 8 / Springboot2 / Rest API, Mongo DB, Docker, AWS, NoSQL, Jenkins, SQL and Web services (SOAP, REST)**.
- Involved in Analysis, Design, and Implementation of APIs and software applications using **Angular 9, Spring boot, Java 8, Microservices, SQL**, Analytics, Data Management, implemented few front-end modules using **Angular 9**, and integrated with Microservices and **spring-boot** based middleware layer.
- Developed Hibernate persistence layer modules using EJB **Java Persistence API (JPA)** annotations and Entity Manager.
- Developed User Interface having animations and effects using **Angular 9**.
- Developed Façade classes to **encapsulate** the business logic and hide the implementation details of the data access classes and EJBs.
- Utilized **AWS CloudWatch** for monitoring application performance, setting up alarms, and implementing proactive measures to maintain high availability.
- Developed **DAOs** (Data Access Object) using Hibernate as **ORM** to interact with **DBMS** – Oracle.
- Seamlessly integrated and utilized **REST** and **SOAP** Web Services to receive updates from third-party systems, enhancing data exchange capabilities by 30%.
- Proficiently utilized build tools like **Maven** and **Gradle** for automation and streamlined project dependency management, reducing build time by 35%.
- Designed various tables required for the project in **Oracle, MySql** database and used the Stored Procedures in the application.
- Good understanding of software design patterns, algorithms, and **data structures**, and ability to apply them to solve complex problems.
- Actively contributed to **Agile development** teams, collaborating with the QA team in preparation and review of test cases, ensuring timely and successful project deliveries.

Technology Stack: Java, JSP, Servlets, Hibernate, JUnit, SQL, HTML, JavaScript, AWS, Git

Education:

Trine University-Detroit, MI

Masters in computer science

- Artificial Intelligence, Machine Learning, Web Development, Data Mining, Data Analysis and Modeling techniques.

Sathayabama University-Chennai, India

Bachelors in computer science

- Data Structures, Programming Concepts, Data Base Management Systems, Computer Architecture.
