SUMMARY

Highly motivated Full Stack Developer with 4+ years of experience designing and building scalable web applications. Proven ability to deliver on projects from front-end development (React, Angular) to back-end development (C#, ASP.NET, Entity Framework) and database management (SQL). Adept at collaboration, automated testing, and staying up to date with emerging technologies. Delivered several projects in college using Python and would welcome the opportunity to practice this further.

EXPERIENCE

Full Stack Software Developer – GoSolutions - January 2024 - April 2024, US, MI, Lansing

- Created and maintained VB.NET and ASP.NET web applications tailored for the special education industry, ensuring compliance and functionality.
- Applied T-SQL to create and modify views, functions, and stored procedures across multiple databases, optimizing data retrieval and manipulation processes including use of Dapper on the back end.
- Developed UI active server pages utilizing Telerik and Bootstrap, enhancing user experience and interface design. Optimized database performance through design and implementation of T-SQL, including triggers and stored procedures, and functions.

Full Stack Software Developer - PetPartners Pet Insurance - May 2022 - May 2023, US, NC, Raleigh

- Developed and maintained back-end code using C#, LINQ, Entity Framework Core, MVC, and PowerShell scripts.
- Created user interfaces and wrote Jasmine test scripts using TypeScript and Angular on the front end.
- Contributed to REST API development, using JSON objects for communication to enhance system functionality.
- Utilized NUnit for automated back-end testing, ensuring high software quality.
- Utilized Microsoft Azure for CI/CD deployment pipelines and microservice architecture management.
- Performed database migrations and deployed schema changes using Entity Framework Core.
- Worked with RabbitMQ as a messaging broker to send automated reports via email to customers.

Full Stack Software Developer - hh2 Cloud Services - August 2019 - April 2022, US, UT, Kaysville

- Designed REST API endpoints and WebSockets using C# for efficient web interface interaction (ASP.NET Blazor, jQuery, React pages).
- Expanded skillset in HTML, React, JavaScript, jQuery, JSX, and CSS for enhanced versatility.
- Built a microservice to improve unit testing in the PDF generation workflow.
- Migrated the weather service API integration to OpenWeatherMap for cost-efficiency.
- Designed and maintained web applications for integrating various construction-based ERP systems.
- Optimized transactional SQL stored procedures for improved data processing.
- Collaborated with cross-functional teams to clarify requirements and ensure solutions met customer acceptance criteria (YouTrack).

Software Development Intern - RedBell Real Estate - July 2019 - August 2019, US, UT, Murray

- Actively participated in daily sprint meetings using Jira for issue tracking and progress management.
- Improved RedBell website designs using the ASP.NET Core framework.
- Gained in-depth knowledge of Microsoft Team Foundation Server (TFS) for source control management.
- Identified and resolved issues across various areas (transform files, SQL queries, C# back-end, JavaScript front-end).
- Integrated and optimized SQL stored procedures to enhance data retrieval efficiency.
- Collaborated with Business Analysts to transform research findings into well-defined user stories.

EDUCATION

Weber State University, Ogden UT (2019)

Weber State University • US, UT, Ogden • 2019 • 3.52

- Bachelor of Science in Computer Science | GPA: 3.52
