As an experienced software developer with over **11+ years** of hands-on expertise in designing, developing, and maintaining scalable applications, I am looking to leverage my deep technical knowledge and problem-solving abilities to contribute to the success of a forward-thinking organization.

PROFESSIONAL SUMMARY

- **11+** years of experience in Core Java, Android and IOS. **6** Years of experience in **React Native** and **5** Years of experience in **ReactJS** and **NodeJs** using the extreme programming (XP) practices like **Pair Programming** and **Continuous Integration(CI/CD)**.
- Adept in end-to-end development of software products from requirement analysis to system study, designing, coding, testing, debugging, documentation and implementation.
- Good knowledge in **OOPS** concepts and very good at identifying and reducing duplicate code.
- Thorough knowledge of **JavaScript, TypeScript, Html and CSS**.
- Strong working knowledge of **Node.js, Express.js**, and **RESTful** API development.
- Hands-on experience on **Android Studio IDE, Webstorm IDE** and good at various shortcuts for refactoring code, debugging, formatting, etc.
- Taking the requirements of application from the client and performing core development using **ReactJS, React Native** and **NodeJs** for mobile.
- Expertise with various npm's like **passport, Sequelize** and **material UI Core**.
- Writing API calls for **Android, IOS** and frontend(**ReactJS**) .
- Integrated **Redux** for managing complex state and handling asynchronous actions, significantly improving app scalability and reducing debugging complexity in large applications.
- Built modern, high-performance web and mobile applications using **React** and **React Hooks**, ensuring that the app remained scalable and efficient with **hooks-based** state management.
- Wrote clean and efficient **JavaScript/TypeScript** code, creating reusable components and services, which significantly reduced the development time for new features and bug fixes.
- Converting the **Figma UX** screens into **JSX** using **React Native** and **ReactJs**.
- Used **Webpack** to bundle **ReactJS** application code, optimize JavaScript, and handle assets like CSS, images, and fonts to ensure fast loading times.
- Collaborated with backend teams to integrate **GraphQL** with existing **RESTful APIs**, enabling smoother data fetching mechanisms for frontend developers.
- Configured **Babel** for transpiling TypeScript, JSX, and ES6 syntax to support a wide range of browsers, improving cross-browser compatibility.
- Used **Postman** extensively to test and validate RESTful API calls, ensuring the accuracy and reliability of API responses.
- Wrote and maintained **Jest** test cases for critical app components, achieving a high test coverage and ensuring functionality remained intact after updates.
- Set up and configured **ESLint** in the project to enforce consistent code style and reduce bugs,

improving team productivity and ensuring maintainable code.

- Responsibilities include **planning, analysis** and **effort estimation** of the change requests.
- Daily and weekly status calls and demoing the progress to the customer.
- Involved in **code review** and responsible for writing the task cards.
- Synchronizing, committing the sources to **Git**.
- Good **debugging** skills and can identify problems quickly. Experience in analyzing the application log and fixing various exceptions.
- Synchronizing, committing the sources using **Git** frequently as part of the continuous integration.
- Followed the **Agile** methodology religiously and involved actively in various ceremonies like Planning (estimating Story Points), **Daily Scrum, updating the stories, task boards, burn down charts, retrospective and JIRA**

TECHNICAL SKILLS

Programming Languages	Core Java(Android), Swift(IOS)
Web Technologies	HTML, CSS, JavaScript,TypeScript, Node JS, ReactJS and React Native
Databases	SQL, MySQL, Sqlite3 and postgresSQL
Version Control	Git, GitHub, GitLab, Bitbucket
Software Tools	Android Studio, Xcode, Webstorm,Visual studio code
Scripting Languages	Shell, PowerShell, Python
Architectures/Frameworks	MVC,MVVM
Dev.Methodology/Approaches	Scrum and Agile
Cloud Platforms	AWS, Microsoft Azure, GCP
Operating Systems	Windows, Linux, IOS,Ubuntu

Professional Summary

Client: Mashreq Bank		
Role: Senior developer	Duration: Aug 2024 - March 2025	Team Size: 20
Technology Stack: React Native, React, JavaScript, TypeScript, Azure, Redux, Axios,Git, CI/CD		
Mashreq Bank is one of the oldest and leading financial institutions in the UAE. Through mobile banking and online banking, they offer various services to customers.		

Responsibilities:

- Responsible for the frontend development using **React Native** for both **Android** and **IOS** and also for the web development using **React**.
- Collaborating with cross-functional teams, including **UX/UI** designers, backend developers, and product managers, to implement new features and enhancements.
- Set up and maintained the **CI/CD pipeline** in **Azure Pipelines** for seamless weekly releases and automated the build, test, and deployment workflows, which **minimized manual intervention** and reduced the chances of deployment errors.
- Worked on writing detailed **unit tests** and **integration tests** using **Jest**, ensuring complete coverage for the application's core features and minimizing the likelihood of bugs in production.
- Worked to fix **SonarQube** issues by addressing code smells, improving test coverage, and resolving performance bottlenecks. This involved regular **refactoring** to reduce technical debt and improve the overall quality of the application.
- Involved in code review and Synchronizing, committing the sources to **Azure** repo.
- Maintained **JIRA** for tracking and updating project defects and tasks.

Client: Cognizant ([CUSTOMER PLUS MOBILE APPLICATION](#))

Role: Senior developer

Duration: May 2021 - Aug 2024

Team Size: 15

Technology Stack: React Native, React, JavaScript, TypeScript, ReactNative Cli

Marketing people will use this application to track sales and events.

Responsibilities

- Actively participated in **sprint planning** and **grooming sessions**, collaborating with product owners and the development team to break down user stories, estimate tasks, and set sprint goals.
- Responsible for the **mobile development** using **React Native** for both **android** and **IOS**.
- Responsible for the **web development** using **React js** and API development using **Node js** Framework.
- Used **Postman** extensively to test and validate RESTful API calls, ensuring the accuracy and reliability of API responses.
- Created highly customized **reusable UI components** from detailed **UX designs** for **mobile and web** applications, ensuring that they were flexible, maintainable, and consistent across multiple screens and features.
- Developed a **GraphQL** API to serve dynamic data to a React front-end application, improving data-fetching efficiency.
- Build and publish mobile UAT and production builds to App Center, ensuring smooth and timely deployment of updates
- Manage the release **Azure pipeline**, troubleshooting build issues and ensuring successful distribution to both internal and external stakeholders..
- Responsible for testing the end-to-end application for functional completeness.
- Responsible for daily and weekly status calls.
- Involved in code review and Synchronizing, committing the sources to Gitlab.

Client: IBM (IBM MOBILE APPLICATION)		
Role: Senior developer	Duration: Dec 2019 - May 2021	Team Size: 8
Technology Stack: React, React Native, Expo, Java, Oracle, Expo, TypeScript		
Recognizing service anniversaries means a lot to employees, as a manager, recognition and appreciation are two of the most powerful tools. The IBM mobile app will help IBM employees give recognition to each other and participate in Years of Service functionality (YOS). Ibmers can easily access main core modules Recognition, YOS, Activity history, Alerts and Profile settings. Managers can review and approve all recognition points.Ibmers can view/redeem earned cash/Blue points.		
Responsibilities • Responsible for the frontend development using React Native for both android and IOS. • Responsible for the web development using React. • Responsible for testing the end to end application for functional completeness. • Responsible for daily and weekly status calls. • Involved in code review and Synchronizing, committing the sources to Gitlab.		

Client: BI WORLDWIDE(Timesheet Management)		
Role: Senior developer	Duration: Mar 2019 - Dec 2019	Team Size: 3
Technology Stack: React Js, Node js, PostgreSQL,JWT, OAuth,JavaScript		
Time Sheet Management Portal will help integrate Gitlab and Peoplesoft and ease the process of Time entry management through a single portal. It also helps in obtaining Effort Adherence, Schedule Adherence metrics.		
Responsibilities • Responsible for taking the requirements of application. • Responsible for the frontend development using React js and API development using Node js Framework • Responsible for testing the end to end application for functional completeness. • Responsible for daily and weekly status calls. • Involved in code review and Synchronizing, committing the sources to Gitlab.		

Client: SWIVEL SOFTWARE (https://dev.highqube.com)		
Role: Senior developer	Duration: Oct 2017 - Jan 2019	Team Size: 8
Technology Stack: React Js, Node JS, MySQL, HTML and CSS		

SwivelSoftware is a collaboration Portal that provides both visibility and transparency between all parties(Buyer, Freight Forwarders, Factory and Importers/Exporters). swivelSoftware does purchase

order Management, Booking the bulk amount of orders and tracking the status of orders via Road, Air and Shipment. The Freight Forwarder's objectives are efficiency and scalability – boost bookings and increase revenue/profit without adding more staff. SwivelSoftware can help!, Freight forwarders use SwivelSoftware to handle the execution of shipments between offices worldwide. Everyone is on the same page using the same system.

Responsibilities

- Responsible for taking the requirements of application from the client.
- Responsible for the frontend development using **React js** and API development using **Node js** Framework
- Responsible for testing the end to end application for functional completeness.
- Responsible for daily and weekly status calls and demoing the progress to the customer.
- Involved in code review and Synchronizing, committing the sources to GIT.

Client: eProtege(<https://www.eprotege.co/>)

Role: Developer

Duration: Feb 2017 - Oct 2017

Team Size: 6

Technology Stack: Grails, Core Java, MySQL, HTML, CSS, Angular JS, Javascript

eProtege is a revolutionary applicant search and hire platform where we leverage intelligent personality profiling that allows employers to find more qualified talent in less time. We have created an interactive job search platform where we give employers several metrics on their candidate before they make initial contact. For our candidates we've simplified the process of searching for employment by gamifying our company directory and allowing it to be an easy one step process.

Responsibilities

- Responsible for taking the requirements of application from the client.
- Responsible for the API development using Grails Framework.
- Responsible for testing the end to end application for functional completeness.
- Involved in minor bug fixes and format changes in HTML, CSS, AngularJS and Javascript.

Client: Fahrenheit70, LLC ([The Bid Kahuna](#))

Role: Mobile developer

Duration: June 2016 - Feb 2017

Team Size: 3

Technology Stack: Android SDK, Android studio, Swift and Xcode

The Bid Kahuna was built for home remodeling contractors. It helps your home improvement team be more effective and productive. This app is for sales reps to speed up the bidding process. It was

designed to be able to give a quote to the customer on the first visit with the homeowner. No more writing bids by hand or emailing them later. The app will sync your phone or tablet to the office so everyone operates in real-time.

Responsibilities

- Involved In core development of both Android and iOS Applications.
- Involved in code review and Synchronizing, committing the sources to GIT.

Client: Presswaale

Role: Mobile developer

Duration: Dec 2015 - May 2016

Team Size: 3

Technology Stack: Android SDK, Android studio, Swift and Xcode

Presswaale is a professional laundry and dry cleaning service that picks up and delivers your laundry from your doorstep - be it your home or your office. We are talking about everything from your socks to your dry cleaning.

Responsibilities

- Involved in UI Design and functionality for both android and IOS
- Cloud Messaging, Push Notification integration using firebase.
- Google Map Integration, Driving Directions.
- Responsible for weekly status calls and demoing the progress to the customer.
- Involved in code review and Synchronizing, committing the sources to GIT.

OTHER PROJECTS

Duration: June 2013 -Dec 2015

Technology: Android,IOS,ReactJs and NodeJs
