Professional Summary: MS in Health Informatics and PharmD graduate with over 3 years of experience combining clinical expertise with data analytics to improve healthcare outcomes. Skilled in extracting and analyzing EHR, CGM, and real-world data using tools such as SQL, Python, REDCap, Tableau, and Power BI to support predictive modeling, early diagnosis (T1D, CFRD, cervical cancer), and personalized interventions for autism. Experienced in clinical research and statistical modeling, with a strong track record of collaborating across clinical and technical teams to deliver scalable, data-driven solutions.

Education

Indiana University Indianapolis

Master of Science in Health Informatics, GPA: 3.98/4.0

Aug 2023 - May 2025

Indianapolis, Indiana

Rajiv Gandhi University of Health Sciences

Doctor of Pharmacy(PharmD), GPA: 7.7/10

Aug 2016 - Dec 2022

Bangalore, Karnataka, India

Experience

Indiana University School of Medicine, IU Health

Healthcare Data Analyst

Sep 2024 - May 2025

Indianapolis, Indiana

- Analyzed Dexcom/Libre CGM data using SQL and Python to classify T1D stages, managed records in REDCap, and visualized trends in Tableau to support early diagnosis and intervention.
- Extracted and analyzed Cerner EHR and CGM time-series data using SQL and Python to enable early detection of cystic fibrosis-related diabetes, and visualized clinical trends via Power BI and Excel dashboards to support the future development of predictive models.
- Partnered with endocrinology research teams to manage clinical study logistics, oversee patient data collection, and ensure high-quality EHR data integration through Cerner.

HANDS in Autism, IU School of Medicine

Data Analyst Research Assistant

May 2024- August 2024

Indianapolis, Indiana

- Led the Coordinated Care team in managing and analyzing the NDI Exploratory dataset of 110 Autism Spectrum Disorder (ASD) patient progress notes; utilized REDCap and Python for accurate data extraction and statistical analysis.
- Conducted an in-depth literature review, collected and analyzed data using Excel, and developed Tableau visualizations to present trends and support data-driven insights for ASD research.
- Developed interactive Power BI visualizations to track self-injurious behavior (SIB) trends over time, identifying correlations with demographic factors such as age and gender to inform data-driven, personalized treatment strategies.

Indiana University Indianapolis

Graduate Teaching Assistant

Jan 2024 - May 2025

Indianapolis, Indiana

- Facilitated hands-on training sessions, evaluated student assignments, and provided constructive feedback for courses such as Health Information Research Analysis, Medical Coding and Terminology, and Security and Privacy Policies and Regulations.
- Collaborated with faculty to uphold grading standards, ensuring consistency and fairness across coursework and contributing to academic integrity and student success.

Alankar Polyclinic and Medicals

Hospital pharmacist

December 2022 – July 2023

Kerala, India

- Ensured regulatory compliance and accurate medication dispensing by verifying electronic prescriptions, reconciling controlled substances, and managing inventory in accordance with pharmacy standards.
- Provided patient counseling, addressed medication-related inquiries, mentored pharmacy assistants, and contributed to continuous quality improvement initiatives.
- Utilized pharmacy databases and analytics tools to collect and analyze medication dispensation data, identify trends in drug interactions, and support clinical decision-making; developed Power BI dashboards to visualize key insights.

Siddaganga Medical College and Research Institute

Clinical Pharmacist Intern - Department of General Medicine, Pediatrics & Surgery

December 2021- December 2022

Karnataka, India

- Reviewed patient records to assess clinical conditions, identify untreated health issues, and document adverse drug reactions (ADRs) to ensure safe and effective patient care.
- Collaborated with physicians and care teams to develop evidence-based medication plans that optimized pharmacotherapy and minimized side effects.
- Maintained detailed treatment documentation and utilized Excel and Power BI to support data entry, analyze trends, and create visualizations that enhanced clinical decision-making.

Skills	
Data Analysis & Visualization:	SQL, Python, R, Tableau, Power BI, Excel, Matplotlib
Statistical Tools:	SAS, SPSS, SATA, ATLAS
Statistical Methods:	Hypothesis Testing, Regression Analysis, Time-Series Analysis, Sentiment Analysis
Machine Learning & NLP:	Scikit-learn, TensorFlow, Numpy, Pandas, Natural Language Processing (NLP), Clustering
Markup Languages	XML, HTML, JSON, Docker, REST APIs
EHR systems:	Cerner, OpenEMR, OpenMRS
Healthcare Standards:	SNOMED, ICD, LOINC, CPT, RxNorm, HL7, FHIR, OHDSI, OMOP CDM
Tools & Platforms:	DHIS2, GitHub, Postman, Oxygen XML Editor, REDCap, Qualtrics, Jupyter, RStudio, Lucidchart
Clinical:	Patient Counseling, ADR Monitoring and Reporting, Dose Calculation, Therapeutic Drug Monitoring.

Projects	
Clinical Data Integration for CFRD Research <i>SQL, Cerner EHR</i>	Jan 2025 - May 2025
- Extracted and integrated clinical, demographic, and CGM data from Cerner EHR, Dexcom, and Libre systems for 25 CFRD patients, building a structured research database in REDCap to support future clinical analysis. - Utilized Excel and Power BI to validate datasets and visualize glycemic control trends, enabling insights into disease progression and laying the groundwork for predictive modeling in CFRD research.	
Comparative Evaluation of Wearable Step-Tracking Devices in Older Adults 	Jan 2025 - May 2025
- Designed and conducted a study comparing step-count accuracy between shoe-based smart insoles and wrist-worn devices in adults aged 40–75 across varied treadmill speeds. - Developed and implemented usability assessment methods using System Usability Scale (SUS) surveys and semi-structured interviews to evaluate user comfort and device acceptability. - Applied statistical methods including Mean Absolute Error (MAE), percentage error, and paired t-tests to quantify performance differences and inform future wearable technology design.	
Analysis of Self-Injurious Behavior in ASD <i>SQL, Python</i>	May 2024 - Aug 2024
- Conducted data cleaning, correlation analysis, and statistical testing on REDCap datasets of 110 ASD patients using Python to identify patterns in self-injurious behavior (SIB) across age, gender, and treatment stages. - Visualized trends and recovery metrics through Power BI dashboards, informing targeted interventions and enhancing data-driven clinical decision-making for autism care.	
Statistical Analysis of Diabetes Predictive Factors <i>R, Statistics</i>	Jan 2024 - May 2024
- Processed and cleaned 100,000 patient records using outlier detection via the IQR method and applied statistical transformations to prepare data for analysis. - Developed a predictive model using logistic regression and multivariate analysis to assess the combined impact of HbA1c, BMI, and blood glucose on diabetes risk, determining their statistical significance in predicting disease occurrence. - Utilized Kruskal-Wallis and Dunn’s post-hoc tests to assess and validate the statistical significance of key variables. - Generated statistical reports and visualized key insights using histograms, QQ plots, and heatmaps to support data-driven decision-making.	
Data-Driven Approach to Stroke Risk Prediction <i>SQL, Python</i>	Aug 2023 - Dec 2023
- Performed data cleaning, preprocessing, and outlier detection on the BRFSS dataset (70,692 records) to ensure data integrity while analyzing risk factors associated with stroke. - Conducted exploratory data analysis (EDA) and applied chi-square tests to uncover significant associations between stroke occurrence and risk factors such as hypertension, smoking, BMI, and heart disease. - Built predictive models using Logistic Regression, Random Forest, CatBoost, and K-Nearest Neighbors (KNN) to evaluate stroke risk, with Random Forest achieving 99% accuracy. - Designed and queried a SQL database for structured data storage and efficient retrieval, enhancing the overall analysis workflow.	
Antihypertensive Prescribing Patterns in Comorbid Conditions 	February 2021- July 2021
- Conducted a six-month prospective observational study at a super specialty hospital to evaluate prescribing patterns of anti-hypertensive medications in patients with co-morbid conditions. - Identified the clinical benefits of combination therapy in improving patient outcomes and slowing disease progression for select co-morbidities.	

Relevant Publications	
* Study on selection of anti-hypertensive agents in patients with co-morbid condition in super specialty hospital Tumakuru, Karnataka - World Journal of Pharmacy and Pharmaceutical Sciences, Volume 11, Issue 6:2245-2264.
