Career Objective

Recent computer science graduate with experience in front-end development through personal projects. Skilled in HTML, CSS, JavaScript, and React. Looking for an entry-level position to apply my skills, learn more, and contribute to a team.

Projects

Full Stack Restaurant Application

- Designed and developed a full stack restaurant reservation system using the MERN stack.
- Reactive React UI with form validation and smooth user experience for making table reservations.
- Built RESTful API with Express.js and Node.js to handle reservation submissions and data validation.
- Integrated MongoDB with Mongoose to store and manage customer reservation data.
- Implemented server-side validation, error handling, and tested endpoints using Postman.
- Tools used: React, Node, MongoDB, Express

Weather App

- Created a weather app that allows users to search any city and view real-time weather conditions.
- Tools Used: HTML, CSS, JavaScript, API, SASS, Bootstrap

Amazon Clone

- Developed a fully functional Amazon clone with features including product listings, shopping cart, and user authentication
- Tools Used: HTML, CSS, JavaScript, GIT, SASS, Bootstrap

Netflix Clone

- Built a responsive front-end replica of Netflix , focusing on UI design and user experience.
- Tools Used: HTML, CSS, JavaScript, SASS, Bootstrap

Education

Northeastern Illinois University, BS in Computer Science

2020 – 2024

- GPA: 3.6/4.0
- **Coursework:** Database Management, Comparison of Learning Algorithms, Computational Theory, Project Management, Cybersecurity, Operating Systems

Experience

IT Internship, CMIT Solution – WI

Dec 2022 – Mar 2023

- Created screensaver for over 200 company computers, using Visual Studio, conducted performance testing, and communicated issues with of developers to troubleshoot and problem solve
- Performed unit and performance tests on code, using various testing frameworks, and collaborated with a team of developers to identify, communicate, and troubleshoot issues.

- Collaborating with the development team in a fast-paced environment through Agile principles such as iterative development, daily check-in meetings, or continuous feedback ingestion.
- Participating in regular meetings and testing cycles to incrementally deliver high-quality products.
- Creating user-focused features and documenting features with integration feedback based on changes in project needs.
- Participated in user testing, documented and reported issues and test results, and collaborated with the development team to troubleshoot and resolve problems.
- Created detailed user documentation, ensuring clear instructions and usability, and worked closely with the development team to incorporate feedback and updates.
- Thoroughly tested new features, analyzed performance, and worked with the development team to address and resolve any issues encountered.
- Gained experience in the .NET framework using CSHARP, developed and maintained various applications, and collaborated with the team to ensure effective and efficient implementation.
- Utilized Visual Studio to develop, debug, and deploy applications, ensuring high-quality performance and collaborating with the team to resolve any issues.
