## PROFESSIONAL SUMMARY

- **Senior Data and Business Intelligence Analyst** with **5+ years of experience** delivering enterprise-scale **analytics, business intelligence, and predictive modeling** solutions across retail, finance, healthcare, and manufacturing industries.
- Deep expertise in **SQL** and **Python** to analyze large-scale datasets, uncover risk patterns, and deliver actionable insights that influence business and operational strategy.
- Proven experience building executive-level **dashboards and KPI frameworks** using **Tableau, Power BI, and Looker**, providing real-time visibility into operational performance, fraud risk, patient outcomes, and supply chain metrics.
- Developed **machine learning and predictive analytics** solutions for fraud detection, patient risk stratification, demand forecasting, and predictive maintenance, driving measurable business and operational improvements.
- Experienced in designing scalable **ETL pipelines, analytical data models, and reporting solutions** that improve data quality, accessibility, and reporting efficiency across enterprise environments.
- Strong background in **fraud analytics, AML/KYC monitoring, regulatory reporting, healthcare analytics, supply chain optimization, and facilities performance analytics** across large-scale organizations.
- Strong analytical foundation in **predictive modeling, statistical analysis, forecasting, and experimentation** techniques to support data-driven business decisions.
- Experienced working in **cloud and modern data environments**, supporting high-volume, production-grade analytics workflows.
- Collaborated with executive leadership, Risk, Compliance, Clinical, Operations, and Product teams to translate **business requirements into scalable analytics solutions** that drive data-informed decision-making.

## TECHNICAL SKILLS

**Programming Languages:** SQL (CTEs, Window Functions, PL/SQL, T-SQL, Query Optimization), Python (Pandas, NumPy, Matplotlib, Seaborn, SciPy, Statsmodels), SAS

**Databases:** Google BigQuery, SQL Server, Oracle, Snowflake, MySQL

**Data Visualization & BI:** Tableau (LOD Expressions, Parameters), Power BI (DAX, Power Query, Row-Level Security), Looker (LookML, Derived Tables, PDTs)

**Statistics & Machine Learning:** Predictive Analytics, Classification, Clustering, Time-Series Forecasting, Regression, Anomaly Detection, A/B Testing, ANOVA, Hypothesis Testing

**ETL & Data Integration:** dbt, Apache Airflow, Informatica PowerCenter, SSIS, Alteryx, Azure Data Factory, AWS Glue

**Big Data Technologies:** Databricks, Apache Spark (PySpark, Spark SQL), Hadoop (Hive)

**Cloud Platforms:** Google Cloud Platform (BigQuery), AWS (S3, Athena, Redshift), Azure (Data Lake, Synapse Analytics, Data Factory)

**Data Modeling & Architecture:** Star Schema, Snowflake Schema, Fact-Dimensional Modeling, ER Diagrams, Data Normalization

**Healthcare Systems:** Epic EMR/EHR, Medicare & Medicaid Claims Analytics, HIPAA-Compliant Data Handling

**Excel & Automation:** Power Query, Pivot Tables, Power Pivot, VBA Macros, Lookups

**Collaboration & Project Tools:** Git, GitHub, Jira, Confluence, Agile/Scrum, Kanban

## WORK EXPERIENCE

### Walmart

Dallas, TX, USA

### Data Analyst

Feb 2026 - Present

- Led the migration of mission-critical facilities analytics reports from legacy Tech Assist systems to **Looker and BigQuery**, improving reporting scalability, reducing **manual reporting effort by 60%**, and enabling enterprise-wide visibility into store operations.
- Designed and developed scalable **LookML data models and BigQuery reporting solutions** powering enterprise-wide facilities analytics, enabling real-time monitoring of refrigeration health, HVAC performance, dew point metrics, and store-level operational KPIs.
- Built complex **SQL transformations using CTEs, window functions, and aggregations** on millions of Walmart sensor telemetry records to standardize and compute key performance indicators such as Time-in-Target (TnT), rack health, and store performance metrics across **5,000+ retail locations**.
- Optimized large-scale **BigQuery queries and data pipelines** processing high-volume sensor telemetry data by refining joins, reducing data scan volumes, and eliminating inefficient transformations, significantly improving **query performance by around 70%** and reducing dashboard load times.

- Developed **interactive executive dashboards** with drill-down capabilities from fleet-level KPIs to individual store insights, reducing **root cause analysis time by 40%** and improving operational visibility across facilities teams.
- Implemented advanced **LookML modeling** techniques including **derived tables, persistent derived tables (PDTs), and optimized joins**, reducing **query execution time by 50%** and improving dashboard responsiveness for enterprise stakeholders.
- Collaborated with Senior Strategists, Facilities Operations, and Business Leadership teams to gather **business requirements**, perform **ad hoc analysis**, translate business needs into analytics solutions supporting enterprise-wide facilities performance initiatives.
- Conducted **root cause analysis on reporting discrepancies** between Tableau and Looker dashboards by identifying and resolving issues in joins, calculations, date logic, and source data transformations, improving reporting accuracy by over 95%.
- Designed automated **data validation frameworks and reconciliation frameworks**, improving metric accuracy, reducing reporting defects, and strengthening trust in enterprise reporting.
- Enhanced dashboard usability through **KPI standardization, optimized filtering logic, and performance tuning**, increasing stakeholder adoption and reducing report navigation time by 35%.
- Implemented **data governance controls, operating store filters, and telemetry quality rules** to improve dataset reliability and ensure accurate reporting across thousands of retail locations.

## Comerica Bank

Dallas, TX, USA

### Senior Data Analyst

Jul 2024 – Feb 2026

- Analyzed millions of daily financial transactions using **SQL and Python** to identify **fraud, AML risks, KYC exceptions, and suspicious activity patterns**, enabling proactive risk mitigation and supporting regulatory compliance initiatives.
- Developed **Python-based classification models** to prioritize fraud alerts, improving **investigator productivity by 30%** and accelerating resolution of high-risk cases.
- Designed **SQL-driven anomaly detection frameworks** that improved fraud signal precision, **reduced false positives by 25%**, and enhanced monitoring effectiveness for Risk and Compliance teams.
- Utilized **SAS (SAS Enterprise Guide, PROC SQL)** alongside SQL to analyze large-scale transaction data, perform **fraud and AML risk analysis**, and validate suspicious activity patterns for Risk and Compliance teams.
- Built executive-facing **Power BI and Tableau dashboards** monitoring fraud KPIs, transaction risk exposure, and investigation workloads, providing leadership with near real-time visibility into fraud, AML, and transaction risk metrics.
- Utilized **Tableau LOD expressions** to build granular fraud and transaction dashboards, enabling Risk and Compliance teams to drill into customer-level activity and uncover hidden anomalies that were not visible in aggregate reports.
- Developed automated **regulatory and compliance reporting** solutions leveraging **SQL, Power BI, and Snowflake**, improving reporting accuracy and reducing **manual preparation effort by 40%**.
- Applied advanced **DAX measures, drill-through reporting, and row-level security** in Power BI to deliver interactive risk dashboards supporting fraud investigations and executive reporting.
- Optimized **Snowflake SQL** queries and refactored **dbt models**, improving **pipeline performance by 35%** and ensuring same-day refresh for risk dashboards.
- Developed and maintained **dbt and Airflow ETL pipelines** processing high-volume transaction data, reducing **data latency by 40%** and improving reliability of fraud monitoring dashboards and risk reporting solutions.
- Performed **exploratory data analysis (EDA) and statistical testing** to identify transaction approval bottlenecks, improving authorization success rates and customer experience.

## Legacy Health

Portland, OR, USA

### Senior Data Analyst

Jul 2023 – Jun 2024

- Analyzed patient vitals, lab results, and medication adherence patterns from **Epic EMR/EHR data using SQL and window functions**, providing actionable insights that supported clinical decision-making and patient care initiatives.
- Built and optimized **Oracle PL/SQL stored procedures** to automate recurring operational and clinical reports, reducing **report generation time by 50%** and improving reporting efficiency across hospital departments.
- Developed analytics and reporting solutions for **Medicare and Medicaid claims data**, improving reimbursement accuracy, streamlining eligibility validation processes, and ensuring compliance with **CMS regulations**.
- Partnered with Revenue Cycle teams to automate **reimbursement validation workflows**, which reduced manual claim review hours by 20% monthly.
- Developed **patient risk stratification models** using **logistic regression and random forest algorithms** to identify high-risk patient populations, supporting preventive care initiatives and improving care management prioritization.

- Applied **regression, clustering, and time-series forecasting models in Python** to uncover trends in clinical outcomes, resource utilization, and patient populations, supporting operational and clinical improvement initiatives.
- Designed and deployed a **readmission risk prediction model** that enabled early intervention strategies and contributed to a measurable reduction in 30-day readmission rates among targeted patient populations.
- Implemented **predictive disease risk models** leveraging clinical and demographic data, supporting clinical research, early diagnosis initiatives, and patient outcome improvement efforts.
- Built interactive **Power BI dashboards** on Epic data extracts using **advanced DAX calculations**, providing real-time visibility into patient recruitment, clinical trial progress, and research performance metrics for healthcare stakeholders.
- Automated **data validation and cleansing workflows using Python**, reducing **manual QA effort by 40%** and improving data integrity across clinical reporting systems.
- Designed scalable **ETL workflows using AWS S3, and Amazon Redshift** to integrate EHR, claims, and operational datasets, improving data availability and reporting consistency across healthcare analytics platforms.
- Established **HIPAA-compliant data governance controls**, including role-based access management and audit trails, ensuring secure handling of patient-level data across reporting and analytics environments.

## Tata Motors

Pune, MH, India

### Data Analyst

Dec 2020 – Nov 2022

- Built **predictive inventory and demand forecasting models in Python** to optimize reorder points, reducing stock shortages by 18% and improving inventory availability across manufacturing facilities.
- Implemented **machine learning models** for production demand forecasting and **predictive maintenance**, leveraging anomaly detection techniques to reduce unexpected equipment failures and improve equipment availability across production lines.
- Applied **time-series forecasting and regression analysis** to predict raw material consumption, improving procurement planning accuracy and reducing supply chain disruptions.
- Evaluated supplier performance using **statistical analysis and KPI scorecards**, supporting strategic sourcing decisions and improving procurement efficiency.
- Analyzed supply chain data from **SAP ERP (MM/PP modules)** and integrated insights into **SQL and Power BI dashboards** for real-time production tracking.
- Performed **exploratory data analysis (EDA)** on logistics and transportation datasets, identifying cost-saving opportunities that reduced distribution expenses by 12%.
- Designed **Tableau dashboards** tracking production throughput, inventory levels, supplier performance, and manufacturing KPIs, improving operational visibility for plant leadership.
- Built **Power BI dashboards with advanced DAX** measures to monitor quality metrics, defect rates, production costs, and machine downtime across manufacturing operations.
- Developed reusable **stored procedures and optimized T-SQL queries** (indexing, execution plans), improving ETL pipeline efficiency and reducing reporting turnaround times for operations and finance teams.
- Designed and maintained **SSIS ETL pipelines and SSRS reporting solutions** supporting finance, procurement, and plant operations analytics.
- Automated recurring supply chain and financial reports in **Excel** using **Power Query, Pivot Tables, and advanced formulas**, reducing manual reporting effort by 15+ hours per month and improving data accuracy for operations teams.
