(203)-600-6902 | alankrith567@gmail.com | LinkedIn | GitHub | Portfolio

PROFESSIONAL SUMMARY

Data Analyst with hands-on experience in data analysis, customer transaction analytics, data visualization, KPI reporting, and business-focused insights. Experienced in analyzing performance data, identifying trends and opportunities, and translating findings into practical recommendations that improve customer outcomes and revenue performance. Strong foundation in SQL, Python, Excel, Tableau, statistical analysis, ETL, dashboard development, and cloud data platforms. Currently completing an M.S. in Business Analytics with project experience spanning customer segmentation, recommendation systems, geospatial analytics, and AWS-based data engineering.

TECHNICAL SKILLS

Programming & Data: Python (Pandas, NumPy, Scikit-learn), SQL (PostgreSQL), R, Advanced Excel

Visualization & BI: Tableau, KPI Reporting, Dashboard Development, Data Visualization, Trend Analysis, Analytical Storytelling

Analytics: EDA, Statistical Analysis, Data Cleaning, Data Validation, ETL, Data Transformation, Customer Segmentation, RFM Analysis

Machine Learning: Random Forest, Decision Trees, Linear/Logistic Regression, K-Means Clustering, Collaborative Filtering

Cloud & Data: AWS (EC2, Lambda, S3, Redshift, Step Functions, EventBridge), Microsoft Azure, Data Lakes, Data Warehousing

PROFESSIONAL EXPERIENCE

Customer Data Analyst– Airbnb | Sutherland | Jul 2022 – 2024

- Supported Airbnb customers by reviewing transaction and account performance information and translating data observations into clear, actionable recommendations.
- Analyzed customer transaction and performance trends to identify opportunities for improving booking activity, transaction outcomes, and revenue performance.
- Used performance reports and data visualization techniques to interpret trends, compare performance indicators, and communicate insights to customers in an easy-to-understand manner.
- Provided data-informed guidance on pricing, listing performance, booking behavior, and operational practices to help hosts identify opportunities to improve revenue.
- Investigated transaction discrepancies and customer-reported issues by reviewing available account and transaction information, validating details, and identifying the appropriate resolution path.
- Documented recurring customer issues, transaction patterns, and performance observations to support consistent resolution processes and improve the overall customer experience.
- Collaborated with internal support teams to escalate data or transaction issues, communicate findings, and ensure timely resolution of customer-impacting problems.
- Maintained strong attention to detail when handling customer financial and transaction information while following established privacy, quality, and process guidelines.

ACADEMIC PROJECTS

Retail Market Intelligence Using Geospatial Analytics | Academic Project | 2025

- Conducted geospatial market gap analysis using CSISG datasets, GIS mapping, and spatial analysis to identify underserved customer segments and support store-location strategy.
- Performed competitor benchmarking using demographic profiling, income segmentation, and housing-type analysis to identify market opportunities.
- Created interactive dashboards and data visualizations to communicate trends, insights, and recommendations to business stakeholders.

RFM-Based Customer Segmentation & Product Recommendation System | Academic Project | 2025

- Built an end-to-end analytics pipeline processing 540K+ transactions, including data cleaning, feature engineering, exploratory analysis, and seasonal revenue-trend analysis.
- Applied RFM analysis, K-Means clustering, and the Elbow Method to segment customers into four actionable groups for retention and revenue-growth strategies.
- Developed an item-item collaborative filtering recommendation system using cosine similarity to support personalized cross-selling and predictive personalization.

Real-Time Supply Chain Tracking & Analytics on AWS | Academic Project | 2025

- Architected an AWS-based event-driven analytics platform using Amazon Redshift, Aurora PostGIS, S3, Step Functions, and EventBridge to process large-scale geospatial events.

- Implemented automated event processing and anomaly detection to identify route deviations and geofence breaches and generate real-time alerts.
- Optimized storage and query performance using S3 data lakes, Redshift Spectrum, and event-filtering logic.

CERTIFICATIONS

- GenAI-Powered Data Analytics Job Simulation — Forage | Applied AI-assisted analysis and insight generation in a simulated enterprise environment.

EDUCATION

M.S. in Business Analytics, Sacred Heart University, Fairfield, CT | GPA: 3.48/4.0 | Sep 2024 – Dec 2025
