

# ANJALI JAGDISH TAVHARE

Chicago, IL, USA | (773) 888-3145 | [anjalitavhare25@outlook.com](mailto:anjalitavhare25@outlook.com) | [LinkedIn](#) | [GitHub](#)

## SUMMARY

Data Engineer and Analyst with 3 years of experience building **batch and streaming pipelines** using **Azure Synapse, Databricks, Airflow, and Snowflake**. Skilled in **data lakehouse design** across **healthcare, manufacturing, and finance** domains using **Delta Lake, SQL-based dimensional modeling, and Spark-based orchestration**. Experienced in **CI/CD implementation, pipeline monitoring, and governance** using **Azure DevOps, Unity Catalog, and logging frameworks**. Also supported cross-functional initiatives involving **data validation, transformation logic, and BI reporting** using **Power BI and dbt**.

## PROFESSIONAL EXPERIENCE

Getinge | New Jersey, USA

Data Engineer Intern

July 2024 – Present

- Constructed 35+ **data pipelines** across **batch and streaming** workloads using **Synapse, Data Factory, Databricks, and Airflow**, supporting **ingestion** from 10+ **internal sources** and cutting weekly **maintenance** by 12 hours.
- Orchestrated distributed PySpark workflows in **Databricks** to process 180+ **REST API** sources, validated using **Postman**, and delivered structured outputs to **Azure Data Lake Storage (ADLS)** for analytics teams.
- Built real-time ingestion pipelines using **Apache Kafka**, configuring 6 producers and 8 consumers across 4 partitions, which enabled near real-time processing of 500K+ log events daily via **Kafka Connect**.
- Mapped a **Lakehouse architecture** using **Delta Lake** and **Synapse Dedicated/Serverless Pools** with **Medallion layering**, optimizing query performance on 3 million+ curated records through partitioning and indexing.
- Developed 25+ **SQL pipelines** across **SSMS and PostgreSQL (DBeaver)**, incorporating stored procedures and entity models to synchronize the **Gold Layer** with downstream applications and regulatory reports.
- Implemented metadata governance with **Unity Catalog** and **Hive Metastore**, introducing lineage tracking and validation rules that reduced average root cause analysis from 6 hours to under 2 hours.
- Deployed modular **Airflow DAGs** to automate **Databricks** jobs and **Synapse** workflows, integrating simulated **AWS S3** storage via **MinIO** and ensuring consistency in CI/CD releases through **Azure DevOps**.

Dell Technologies | India

Data Engineer / Analyst

July 2022 – August 2023

- Created 15+ **automated ETL pipelines** using **Python, SQL, and Apache Airflow** to ingest data from 10+ **REST APIs** and 6 **external CSV log sources** into **Snowflake** and **Redshift**, reducing manual ingestion cycles by 4 hours/week.
- Migrated 7 **legacy reporting workflows** to **AWS Glue and Lambda**, decreasing job runtime from 28 to 9 minutes and eliminating 20+ **recurring QA issues** through **event-triggered monitoring**.
- Modeled 12+ **star schema datasets** incorporating **SCD Type-2 logic** to support **attribution analysis** for 5 **regional campaigns**, enabling accurate reporting across 3 **internal dashboards** and 2 **executive reviews**.
- Integrated **Snowpipe** and leveraged **Snowsight** to automate **continuous data ingestion from S3 into Snowflake tables**, streamlining **near real-time analytics** and supporting 3 **high-traffic dashboards** used in **campaign performance reporting**.
- Engineered **data validation checks** and **pre-aggregation logic** using **dbt**, supporting 6 **BI pipelines** and reducing **dashboard load latency** by 12 seconds across 3 **key stakeholder dashboards**.
- Configured **alerting** and **SLA monitoring** with **SNS** and **custom logs**, improving reliability of 4 **mission-critical workflows** and flagging **anomalies within 5 minutes** of failure events.
- Integrated **predictive model outputs** for **customer churn** into 2 **production pipelines**, aligning outputs with **Power BI dashboards** used by 4 **business units** and supporting **weekly retention review cycles**.

Adani Group | India

Data Analyst Intern

May 2021 – July 2022

- Architected structured workflows in **Python (pandas)** to extract, clean, and standardize raw data from 8+ **source systems**, reducing manual preparation by 6 hours per week for recurring reports.
- Optimized complex **SQL queries** in **PostgreSQL** to support 12+ **business dashboards**, decreasing data retrieval time by over 20 seconds per query.
- Provisioned reusable data validation scripts using **Python** to process 30,000+ **production records daily**, ensuring accuracy before visualization and executive review.
- Collaborated with **BI developers** and **business analysts** to define KPIs and align data models across 3 **operational departments**, improving cross-functional reporting consistency.
- Documented data dictionaries, table joins, and validation logic in **Confluence**, enabling faster onboarding for 2 **new analysts** and supporting smoother audit handoffs.
- Designed and deployed **Data Factory Mapping Data Flows** for 5+ pipelines ingesting energy production data, enabling trigger-based transformations and supporting scale-up across 3 departments.

---

## TECHNICAL SKILLS

- Programming:** Python, SQL, PySpark
- Big Data & Processing:** Apache Spark, Delta Lake, Kafka, Databricks
- Cloud Platforms:** Azure (ADF, Synapse, ADLS, DevOps, Key Vault), AWS (S3, Glue, Lambda, Redshift), Snowflake
- ETL & Orchestration:** Airflow, dbt, Azure Data Factory, SSIS, Informatica
- Data Modeling:** Star Schema, Snowflake Schema, Medallion Architecture, SCD Types, Partitioning
- Monitoring & Governance:** Unity Catalog, Great Expectations, Logging, Alerting
- Visualization:** Power BI, Tableau
- DevOps & Version Control:** Git, Azure DevOps, GitHub Actions, Docker
- APIs & Automation:** REST APIs, Postman, CI/CD
- Machine Learning:** scikit-learn, MLflow, Feature Engineering, Model Deployment
- Additional:** Distributed System Design, Stakeholder Communication, Agile (JIRA, Confluence)
- 

## PROJECTS

### Automated ETL Pipeline for Music Streaming Analytics Using Airflow [Link](#)

- Orchestrated 5 scalable **ETL pipelines** using **Apache Airflow**, automating **ingestion** and **transformation** of 2K+ daily **S3-based JSON/CSV logs** into **Redshift**, reducing 12+ hours/week of **manual effort**.
- Engineered 3 custom **Airflow operators** with embedded **integrity checks**, stabilizing **failure-prone tasks** and reducing **QA review cycles** by over 18 hours/month across 4 **dependent teams**.

### Azure-Based Clinical Data Lakehouse & Analytics Platform [Link](#)

- Integrated over 1 million **EHR, EMR**, and **claims records** using **Azure Data Factory** and **Databricks**, implemented in a **HIPAA-compliant Medallion Architecture** supporting 120+ **reporting dashboards**.
- Enabled **pipeline observability** via **Spark logs**, **alerting triggers**, and **validation checks**, resolving 8 recurring **pipeline failures** and improving downstream **dashboard reliability** for 3 **clinical units**.

### Sales Insights & Forecasting Dashboard

- Established a centralized reporting system using **SQL Server**, **Power BI**, and **Azure Synapse**, processing **1M+ sales transactions** weekly to deliver sub-5 second response times across **5 executive dashboards**.
  - Executed KPI monitoring and trend forecasting using **DAX measures**, **custom visuals**, and **row-level security**, identifying **25+ sales anomalies/month** and enabling regional teams to respond before quarterly impact.
-
