Availability: August - December 2025

Education

Northeastern University | Boston, MA

Aug 2022 – Expected May 2026

Khoury College of Computer Sciences – *Candidate for a B.S. Computer Science & Mathematics*

Relevant Coursework: Data Structures and Algorithms, Foundations of Data Science, Database Design, Probability and Statistics, Linear Algebra, Matrix Methods for Machine Learning, Statistics and Stochastic Processes, Combinatorics

Technical Skills

Languages: Java, Python, SQL, LaTeX, Lean, Racket

Libraries: JUnit, pandas, NumPy, Matplotlib, seaborn, scikit-learn

Tools: IntelliJ, Visual Studio Code, Docker, DataGrip, Eclipse, Jupyter Notebook, GitHub

Experience

Wyzant | Remote

Nov 2023 – Feb 2024

Private Math Tutor

- Achieved certification to tutor Pre-Calculus, Integral and Differential Calculus, SAT Math, and Java; delivered personalized lessons that matched different learning styles to boost engagement and performance.
- Provided step-by-step solutions to student-submitted questions, enhancing student comprehension through clear explanations and examples.

Gen Korean BBQ House | Frisco, TX

Sep 2021 – Aug 2022

Host and Cashier

- Streamlined tip calculation processes using Microsoft Excel, ensuring an accurate and timely distribution of earnings to employees.
- Promoted to the role of Head Host within three months, in recognition of exceptional leadership and communication skills; Led a team of hosts and given the responsibility of training new employees.

Projects

Co-op Connect App | SQL, Python, Docker

Oct 2024 – Dec 2024

- Developed a full-stack Co-op management app with Streamlit for the frontend, Flask REST API for the backend, and MySQL for the database, using Docker to run and manage separate system components.
- Implemented role-based access control to provide secure, role-specific access for students, employers, parents, and administrators, ensuring appropriate navigation and data visibility.
- Built RESTful API endpoints supporting job postings, housing searches, city statistics, and administrative tools, with performance monitoring and user activity tracking.

Collaborative Weekly Planner | Java, IntelliJ, JUnit4, GitHub

Mar 2024 – Apr 2024

- Integrated a comprehensive weekly planner system, featuring user schedule management, event planning, and XML data serialization, while applying object-oriented programming principles to develop a robust, flexible codebase.
- Utilized the adapter, strategy, decorator and command pattern to improve flexibility and functionality.
- Implemented MVC architecture and GUI, for visualizing and manipulating multiple users' schedules and contributing to the development of graphical interfaces, enhancing user interaction and system usability.

Simple Puzzle Game | Java, IntelliJ, JUnit4

Jan 2024 – Feb 2024

- Developed an interactive puzzle game with multiple variants, using OOP techniques to model game dynamics and behaviors.
- Implemented the Model-View-Controller architectural pattern to create a clear division between the logic, user interface, and the input.

Heart Disease ML Model | Python, Jupyter Notebook, pandas, scikit-learn, Matplotlib

Oct 2023 – Dec 2023

- Collaborated with a small team leveraging various databases to identify the key symptoms and indicators that can lead to heart disease, while also being selective about the dataset chosen for the model, so the data accurately represent the population and mitigating biases.
- Utilized the pandas and Matplotlib libraries to perform an exploratory data analysis to find characteristics within the data that can be applied to the model.
- Constructed three separate models using methods such as logistic regression, random forest regression, and support vector machines; Deduced that the support vector machine yielded the highest accuracy of 92%.
