

CAREER OBJECTIVE

Data analyst experienced using SQL, Excel, and BI tools such as Power BI, Tableau, and cloud platforms like AWS to collect, clean, validate, and analyze large datasets from multiple sources, developing dashboards, reports, and visualizations. Skilled at statistical analysis to identify trends, patterns, and business opportunities, delivering actionable insights to stakeholders. Able to manage multiple priorities and meet deadlines with attention to detail and a commitment to data quality.

TECHNICAL SKILLS

- **Languages & Tools:** Python (Pandas, NumPy), R, SQL, PostgreSQL, Microsoft Excel (advanced formulas, pivot tables), React.js/Next.js, TypeScript, Git/GitHub, REST APIs, AWS (EC2, S3, SQS, Cognito).
- **Business Intelligence & Data Engineering:** Power BI, Tableau, Apache Spark, ETL pipelines, data modeling, data visualization, data cleaning and transformation, database management, relational databases, KPI tracking, automated reporting.

PROFESSIONAL EXPERIENCE

Software Engineer Intern — Lauratte LLC (Digital Education Lab) May 2025 - August 2025
Charlotte, NC

- Designed and delivered role-based dashboards, reports, and visualizations for a multi-school web portal (React/Next.js + TypeScript), supporting reporting and analytics for 1,000+ business stakeholders.
- Implemented backend API integration with secure authentication and authorization (Amazon Cognito, REST APIs), maintaining data accuracy, integrity, and consistency with zero reported breaches.
- Streamlined cloud operations on AWS EC2, helping manage multiple priorities and meet deadlines, right-sizing resources to sustain ~99.9% uptime and cutting infrastructure costs by ~20%.

Data Science Intern — TwiLearn EduTech Pvt. Ltd. May 2023 - July 2023
Mumbai, India

- Performed statistical analysis of data in Python and SQL to identify trends, patterns, and business opportunities, delivering actionable insights that guided product and content strategy decisions.
- Extracted, cleaned, and transformed data through SQL-based ETL data pipelines feeding interactive Power BI dashboards to automate recurring reports and improve operational efficiency, cutting manual key performance indicators (KPIs) reporting by ~25%.
- Built and validated predictive models (regression & classification) in scikit-learn, applying feature engineering and cross-validation to improve forecast accuracy and cut prediction error (RMSE) by ~15%.

PROJECTS

AI-Driven Strategic Portfolio Optimization May 2026

- Built an end-to-end financial analysis and forecasting pipeline across 30 assets (~90K records), engineering 20+ features and training XGBoost/Random Forest/Gradient Boosting regressors with strong attention to detail.
- Prevented look-ahead leakage with rolling walk-forward validation, then fed forecasts into a Black-Litterman + SLSQP optimizer for data-supported allocation decisions.
- Delivered a 6-tab interactive dashboard to analyze, transform, and visualize data — real-time forecasts, back-testing, and risk analytics (VaR, Sharpe, drawdown) — to support strategic and operational decisions in allocation strategy.

Skin Cancer Detection & Classification May 2024

- Profiled and balanced the HAM10000 image dataset across 7 diagnostic classes via targeted augmentation, applying strong attention to detail to correct distribution skew before model training.
- Built a transfer-learning classification model reaching 94% top-3 accuracy across 7 lesion categories, evaluating performance with confusion matrices and top-k metrics to surface error patterns.
- Delivered predictions through an interactive web app, returning the top-3 diagnoses with confidence scores, making model output interpretable and actionable for non-technical reviewers.

AI-Based Virtual 3D Try-On December 2023

- Delivered a real-time computer-vision pipeline in Python/OpenCV that overlays virtual try-on items onto live video, cutting rendering lag by ~20%.
- Engineered the image-data preprocessing pipeline (normalization, resizing, buffering) for performance tuning.
- Built a monitoring dashboard tracking real-time pipeline metrics (latency, throughput, prediction confidence) to surface usage patterns and support data-driven performance optimization.

EDUCATION

M.S. Data Science, Analytics & Engineering (Master's Degree) | GPA: 3.89/4.0 May 2026
Arizona State University, Tempe, AZ

- Relevant Coursework: Statistical Machine Learning, Data Mining, Statistics for Data Analysts, Advanced Database Management Systems, Data-Driven Optimization, Data Processing at Scale.

B.Tech Information Technology (Bachelor's Degree) | GPA: 3.94/4.0 May 2024
KJ Somaiya Institute of Technology, Mumbai, India

- Relevant Coursework: Data Structures & Algorithms, Cloud Computing, DevOps, Software Testing.

AWARDS & LEADERSHIP

- **Awards:** ASU Merit Scholarship; Winner, Business Case Study Competition.
- **Leadership:** Team Head, IEEE Student Branch — led teams with strong communication skills and attention to detail.
