

Jangaiah Bathuka

Senior Full Stack Java Developer

jbathuka9@gmail.com | +1 (901) 283-0814

PROFESSIONAL SUMMARY

- 5+ years of full-stack Java development experience building high-availability, consumer-facing web applications capable of handling thousands of transactions per second with **99.999%** uptime across distributed enterprise environments.
- Expert in **Angular 14** and **JavaScript** (ES6+/TypeScript) for building responsive, accessible SPAs integrated with robust Java **Spring Boot** back-ends.
- Proficient in **Java 8/14/17** with deep expertise in **Spring Boot**, **Spring Cloud**, **Spring Cloud API Gateway**, **Spring Security**, and **Hibernate** for enterprise-grade microservices.
- Skilled in designing and exposing **RESTful APIs** with contract-first principles, API versioning, rate limiting, and gateway routing using **Spring Cloud**.
- Strong authentication and identity expertise — implementing **OAuth 2.0**, **SAML**, and **JWT** authentication flows, securing APIs with **Spring Security**.
- Proficient in **MongoDB** and **PostgreSQL** database design, schema optimization, indexing strategies, and query tuning for high-throughput, low-latency data layers.
- Experienced with **CI/CD** pipelines using **GitHub Actions**, **Jenkins**, **Bamboo**, **Sonar**, **Black Duck**, and **Veracode** for automated build, security scanning, and deployment.
- Skilled in containerized deployments with **Docker** and **Kubernetes**, deploying applications to **GCP** and **AWS** cloud platforms.
- Experience integrating **AI-powered REST APIs** into microservices back-end pipelines for intelligent automation, data processing, and analytics-driven enhancements.
- Strong **Agile/Scrum** practitioner with proven experience in sprint planning, backlog grooming, and iterative delivery of complex full-stack features.

TECHNICAL SKILLS

Languages	Java 8/14/17, JavaScript (ES6+), TypeScript, SQL, PL/SQL
Front-End	Angular 6/14 (NgRx, RxJS, Angular Material), React.js, Redux, HTML5, CSS3, SCSS, Bootstrap
Back-End	Spring Boot, Spring Cloud, Spring MVC, Spring Security, Spring Data JPA, Hibernate, Node.js
APIs & Integration	REST APIs, SOAP, JAX-RS, JAX-WS, Spring Cloud API Gateway, OAuth 2.0, SAML, JWT
Testing	JUnit, Mockito, Karma, Jasmine, Cucumber (BDD), Accessibility Testing (WCAG 2.1)
Databases	MongoDB, PostgreSQL, Oracle, MySQL, Cassandra, NoSQL
CI/CD & DevOps	GitHub Actions, Jenkins, Bamboo, Sonar, Black Duck, Veracode, Maven, Gradle, Docker, Kubernetes
Observability	Splunk, BigQuery, Grafana, Log4J 2, ELK Stack, Prometheus, AWS CloudWatch
Cloud	GCP, AWS (EC2, S3, Lambda, RDS, ECS, EKS, SQS), Azure, PCF
Security	OAuth 2.0, SAML, JWT, Spring Security, SailPoint (AD, LDAP, JDBC), NIST Standards
Messaging	Apache Kafka, IBM MQ, JMS
Methodologies	Agile Scrum, TDD, BDD, SDLC, Microservices, CI/CD, High-Availability Architecture

PROFESSIONAL EXPERIENCE

Kaiser Permanente — Oakland, CA
Senior Full Stack Java Developer

February 2024 – Present

- Led development of enterprise **Angular 14** consumer-facing web applications with component-based architecture, **Angular Material**, and **NgRx** state management, integrated with **Spring Boot REST APIs** for a healthcare platform serving millions of users.
- Designed and implemented **Spring Cloud API Gateway** with dynamic routing, rate limiting, circuit breakers, and request filtering for secure, high-availability API management across distributed microservices.
- Implemented **OAuth 2.0** and **JWT**-based authentication and authorization using **Spring Security**, securing consumer-facing web application endpoints and managing fine-grained role-based access control.
- Built and maintained **RESTful APIs** using **Java 17 / Spring Boot** following contract-first design with **OpenAPI/Swagger** documentation, versioning strategies, and backward-compatible API evolution.
- Engineered full-stack features sustaining thousands of transactions per second with **99.999%** availability — applying load balancing, horizontal pod autoscaling on **Kubernetes**, and circuit breaker patterns.
- Integrated **AI-powered REST APIs** into **Spring Boot** microservices for intelligent data processing, automated decision support, and real-time analytics enrichment within the application platform.
- Wrote comprehensive **JUnit**, **Mockito**, **Karma**, **Jasmine**, and **Cucumber** (Java **BDD**) test suites with **>85%** code coverage across back-end services and **Angular** front-end components.
- Implemented accessibility testing (**WCAG 2.1**) across **Angular** UI components — **ARIA** roles, keyboard navigation, color contrast — ensuring inclusive, compliant consumer-facing web application delivery.
- Built and maintained **CI/CD** pipelines using **GitHub Actions** and **Jenkins** with integrated **Sonar** code quality gates, **Black Duck** open-source vulnerability scanning, and **Veracode** SAST security analysis.
- Configured **Splunk** dashboards and alerts for real-time log analysis, **Grafana** metrics visualization, and **BigQuery** log reporting — enabling proactive monitoring and rapid production issue resolution.
- Designed **MongoDB** schemas and **PostgreSQL** relational models supporting high-frequency reads/writes; implemented indexing strategies and query optimization for **sub-50ms** API response times.
- Deployed containerized Java microservices and **Angular** applications to **GCP** and **AWS** (EKS, ECS) using **Docker** and **Kubernetes**, managing rolling deployments and zero-downtime release strategies.
- Led production incident response in time-critical situations — rapid root cause analysis, hotfix deployment via **CI/CD**, and post-incident retrospectives with preventive action items.
- Applied **Java 17** advanced features — record types, pattern matching, ZGC Garbage Collector, and sealed classes — for clean, performant back-end microservice implementations.
- Developed **Kafka** Producer/Consumer event-driven services for async data pipeline processing, decoupling high-volume transactional events from synchronous API request flows.
- Contributed to **Agile** sprint ceremonies — planning, backlog grooming, and retrospectives — as a full-stack owner delivering end-to-end features from **Angular** UI to Java service to database layer.

Environment: Agile SDLC, Java 17, Spring Boot, Spring Cloud, Spring Cloud API Gateway, Spring Security, OAuth 2.0, JWT, Angular 14, NgRx, TypeScript, REST APIs, MongoDB, PostgreSQL, JUnit, Mockito, Karma, Jasmine, Cucumber (BDD), GitHub Actions, Jenkins, Sonar, Black Duck, Veracode, Splunk, Grafana, BigQuery, Docker, Kubernetes, GCP, AWS (EKS, ECS, S3, Lambda), Kafka, Log4J 2, Git, JIRA

Muthoot Finance — India

March 2021 – July 2023

Full Stack Java Developer

- Developed **Angular 6** front-end modules with reactive programming patterns (**RxJS** Observables) for real-time data synchronization, connected to **Java 8 Spring Boot** REST API back-ends.
- Built **RESTful APIs** in **Spring Boot** with **JWT**-based authentication, consumed by **Angular 6** front-end and multiple internal enterprise applications for financial data processing.
- Implemented **OAuth 2.0** authentication flows and **SAML** federation for enterprise SSO integration, securing web application access across identity provider and service provider boundaries.
- Engineered **Java 8** business logic using Streams API, lambda expressions, and predicates for high-performance data transformation and processing in consumer-facing financial application services.
- Developed **MongoDB** data models and **Oracle** relational schemas supporting **Angular**-driven enterprise dashboards with optimized indexes and query strategies for low-latency API responses.
- Wrote **JUnit** test suites and **Mockito** mock layers, alongside **Karma/Jasmine Angular** unit tests, ensuring reliable, regression-free full-stack feature quality across all release cycles.
- Integrated **GCP** Cloud Storage, **Firestore**, and **BigQuery** for scalable back-end data persistence and analytics, surfacing insights to **Angular** front-end reporting dashboards.
- Implemented **Apache Kafka** producer/consumer messaging for asynchronous event-driven processing, decoupling high-volume financial transaction events from synchronous API services.

- Monitored application health and investigated production issues using **Log4J 2** structured logging and **GCP**-native observability tools for rapid incident detection and resolution.
- Managed **Oracle** database performance — indexing, execution plan analysis, and query tuning — to optimize Java back-end API response times for **Angular** consumer-facing application views.
- Deployed Java and **Angular** applications using **Docker** containers on enterprise infrastructure, applying **CI/CD** automation with **Jenkins** for reliable, repeatable release processes.
- Applied **HTML5**, **CSS3**, **Bootstrap**, and **Angular** responsive design patterns for accessible, cross-browser-compatible consumer-facing web application interfaces.

Environment: Java 8, Spring Boot, Spring Security, OAuth 2.0, SAML, JWT, Angular 6, RxJS, HTML5, CSS3, Bootstrap, REST APIs, MongoDB, Oracle, PostgreSQL, Kafka, GCP (Firestore, BigQuery, Cloud Storage), JUnit, Mockito, Karma, Jasmine, Jenkins, Docker, Log4J 2, Git

EDUCATION

Master of Science in Data Science | University of Memphis, Memphis, TN

Aug 2023 – May 2025

Bachelor of Technology — Electronics & Communication Engineering | Guru Nanak University
