Professional Summary

Business Analyst with 3+ years of experience delivering actionable insights through SQL, Power BI, Excel, and workflow automation. Skilled in partnering with cross-functional teams to optimize operations, financial reporting, and strategic decision-making. Proficient in Python data libraries, ETL processes, and cloud technologies. Seeking to leverage technical and business acumen in a mission-driven organization.

Experience

Freelance/Development

August 2024 – Present

- Continued to advance SQL (T-SQL, PL/SQL) and Python (Pandas, NumPy, Matplotlib) proficiency through hands-on coursework and applied mini-projects.
- Supported a local small business (family-run bagel shop) by analyzing weekly sales data and designing a basic dashboard in Excel to track inventory trends, popular SKUs, and sales performance.
- Expanded proficiency in Excel by developing dynamic dashboards, automated reconciliation templates, and advanced financial models using pivot tables, Power Query, and complex formulas.
- Developed Excel-based tools including automated reconciliation templates, dynamic dashboards, and advanced models using Power Query and pivot tables.

Hudson Insurance Group

Business Intelligence Analyst

New York, NY

October 2022 - July 2024

- Designed and maintained interactive dashboards using Power BI and SQL to deliver occupancy insights across multiple departments. Extracted and transformed data from siloed sources to support daily executive decision-making.
- Transformed financial and operational datasets into clean, analysis-ready models using SQL and Power BI. Enabled scenario planning and forecasting through data visualization tailored to executive priorities. Collaborated with HR, Facilities, and IT teams to gather dashboard requirements, iterate on prototypes, and refine visualization design for maximum business impact.
- Ensured data consistency and visualization accuracy by implementing automated checks and quality validation across Power BI dashboards.
- Developed robust data models and multi-tiered Power BI dashboards to track attendance KPIs. Enabled per-day, per-week, and per-month visual insights used by business teams for strategic planning.

Providity

Reporting Analyst

Remote

November 2021 - July 2022

- Analyzed operational request data using SQL and Excel, and translated findings into Tableau-style monthly reporting dashboards to highlight usage trends across departments.
- Cleaned and transformed multi-source data using Excel and SQL to support ad hoc reporting and analysis for budget tracking and reconciliation.
- Communicated key insights to both business stakeholders and technical teams through clearly structured reports and data visual walkthroughs.
- Built lightweight data models and consistent reporting layers in Excel and Power BI, allowing teams to visualize material trends and forecast departmental needs more efficiently.

Parent Assist Link

Data Analyst

Hightstown, NJ

October 2020 – September 2021

- Built a low-code appointment scheduling and FAQ automation system using Power Virtual Agents, Power Automate, and Bot Framework Emulator, enhancing accessibility for families of special needs children.
- Developed interactive Power BI dashboards to monitor revenue cycle KPIs, including claim denial rates and service utilization, uncovering over \$250K in potential billing recoveries.
- Integrated Power Automate with cloud storage and email to trigger alerts for denial patterns and service gaps, improving responsiveness and audit readiness.
- Strengthened data privacy and compliance by designing automated security workflows using Power Platform connectors, reducing operational and regulatory risk exposure.

Med-AZ

Web Developer Intern

Hightstown, NJ

April 2019 - September 2019

- Improved financial reporting modules, reducing reporting errors by 10% and ensuring regulatory compliance for audits
- Enhanced appointment and check-in modules, improving system efficiency and reducing processing time by 15%
