

Bhagyashree Kulkarni

EXPERIENCE

February 2025 - Current

Data Analyst/Power BI Developer/PostgreSQL - Maternal Health

- Developed complete data pipeline to extract and analyze maternal ultrasound research data.
- Identified 30% increase in preeclampsia and gestational complications linked to high visceral fat ratios.
- Executed complex PostgreSQL statements for data extraction, staging, and transformation.
- Utilized advanced DAX functions in Power BI for modeling and analysis of transformed data.
- Created dashboards that demonstrated statistically significant connections between hospitalization, labor, and fetal outcomes.

August 2024 - January 2025

Data Analyst/Tableau Developer - Sepsis

- Created insightful visualizations from datasets to solicit stakeholder feedback and enhance processes.
- Conducted exploratory data analysis on clinical dataset to assess significance of sepsis.
- Developed a KPI dashboard for ICU sepsis patients, improving operational efficiency by 30% using Tableau.
- Analyzed biomarkers' impact on sepsis using advanced Tableau techniques, including trendlines and correlation coefficients.
- Performed detailed analysis of respiratory disorders' roles in sepsis incidence and severity.
- Designed a dashboard utilizing Tableau features like calculated fields and butterfly charts.
- Assessed patient data against SIRS criteria to identify eligible patients for timely care notifications.
- Executed SOFA analysis on sepsis patients, relating scores to organ disorders for informed decision-making.

February 2024 - July 2024

Data Analyst/Tableau Developer - Gestational Diabetes

- Provided clinical raw, complex data for analysis and interpretation.
- Utilized Python libraries, including pandas and NumPy, for effective data cleaning.
- Generated visualizations depicting participant profiles and key performance indicators.
- Developed dashboard to monitor metrics such as miscarriage rates and BMI.
- Established correlations between biomarkers, including WCC and platelet counts.
- Analyzed inflammatory markers, focusing on CRP and albumin levels.

August 2023 - January 2024

Data Analyst/Power BI Developer/Python Developer - Gauge influence of stress on exam Performance

📍 Cleveland, OH 44130

📞 +14045139073

SUMMARY

Data analyst with over two years of experience in report and dashboard development for stakeholders. Skilled in data analysis and communication of actionable insights. Proficient in Tableau, SQL, and Power BI for data extraction, cleaning, and visualization. Also brings over three years of experience in lectureship at diploma and engineering colleges.

SKILLS

- Tableau
- Microsoft Power BI
- PostgreSQL
- Python
- ETL processes
- Trello
- Jira
- Git
- Microsoft Excel
- Microsoft PowerPoint

- Utilized Trello for sprint planning, reviews, and retrospectives to enhance project management efficiency.
- Conducted daily scrum calls to facilitate team communication and project updates.
- Analyzed heart rate as a key biomarker related to stress alongside EDA, accelerometer data, and skin temperature.
- Performed detailed assessments of participants' grades in relation to stress indicators.
- Developed advanced visualizations, including lollipop and radial charts to represent data effectively.
- Calculated total stress scores using a custom field, identifying correlations with other markers.
- Evaluated students' grades against total stress score, heart rate score, and additional metrics.
- Analyzed heart rate variability (HRV) from blood volume pulse (BVP) and established correlations with other biomarkers.

February 2023 - July 2023

Data Analyst/Power BI Developer - Diabetes on Cerebrovascular disease in elderly patients

- Created visually engaging Power BI data visualizations to convey findings to stakeholders.
- Performed descriptive and statistical analysis, highlighting a 38% increased likelihood of Dementia in diabetes patients.
- Determined that 96% of patients with diabetes over 15 years developed Hypertension.
- Conducted correlation analysis and identified a strong positive correlation between reverse dipping blood pressure and poor diabetes management, thus increasing the incidence of cardiovascular disease and an elevated 75% risk for cognitive impairment.

PUBLICATIONS

- A step-by-step 'Butterfly Chart' In Tableau, 03/2023
- Dynamic-Control-Chart, 03/2023
- Ranked Bumped Chart step by step, 03/2023
- Actions on Filter, 03/2023

AWARDS

Datathon - 2nd runner up

EDUCATION

July 2016

Master's of Computer Engineering

Savitribai Phule University of Pune

July 2011

Bachelor of Computer Science And Engineering

Sant Gadge Baba Amravati University
