

SUMMARY

Results-driven **Business & Data Analyst** with expertise in **SQL, ETL pipeline development, Power BI, Tableau, and Python (Pandas, Scikit-learn, NumPy)** to deliver advanced analytics and executive dashboards. Experienced in translating complex requirements into actionable insights, automating workflows to improve efficiency by **20%+**, and driving KPI, financial, and operational analysis. Strong collaborator in **Agile/Scrum environments** with hands-on experience in **ERP validation and stakeholder management**, focused on enabling data-driven decision-making.

PROFESSIONAL EXPERIENCE

IT Operations & App Rationalization Analyst (Intern) | HEARST | NY, USA **June 2026 – Present**

- Developed a CTO-facing dashboard in 10 days, automating reporting for 1,000+ enterprise applications and reducing manual effort by 80% while supporting application rationalization decisions.
- Drove Application Rationalization initiatives by analyzing enterprise software inventory and transforming complex data into actionable insights for executive leadership.
- Built an automated dashboard with Python, HTML, CSS, and JavaScript, automating stakeholder input and reporting.
- Enabled data-driven application retention and retirement decisions through real-time portfolio, ownership, and usage insights.
- Delivered a scalable automation framework within 10 days, significantly reducing manual effort, improving operational efficiency, and enhancing decision-making across the enterprise.

Graduate Assistant | SACRED HEART UNIVERSITY | CT, USA **January 2025 – January 2026**

- Designed and maintained 6+ executive dashboards using Power BI and Tableau to enable KPI tracking, operational performance monitoring, and strategic decision-making for departmental leadership.
- Engineered and optimized SQL Server data models (tables, views, and complex queries) to extract, reconcile, and validate 50K+ record datasets, significantly improving reporting accuracy, consistency, and reliability.
- Automated end-to-end reporting and ETL workflows using SQL, Excel Power Query, VBA, and Python, reducing manual effort by 20%+, saving 15–20 hours per month, and accelerating reporting cycles by 30%.
- Applied advanced analytics and predictive modeling in Python (Pandas, Scikit-learn) to support forecasting, utilization analysis, anomaly detection, and financial/operational root cause analysis, improving process efficiency by 15%.
- Collaborated within Agile/Scrum teams, actively participating in ceremonies and managing deliverables via JIRA and Confluence, while mentoring peers on dashboard design, SQL best practices, and documentation across 3+ cross-functional initiatives.

Business Analyst – Data & Insight | KPMG | Hyderabad, India **October 2023 – August 2024**

- Engineered scalable SQL-based ETL pipelines and automated data workflows, integrating multi-source datasets while ensuring data validation, integrity, and reliability for enterprise reporting.
- Devised and refined Python-based analytics solutions leveraging Pandas, NumPy, Matplotlib, and R to perform data wrangling, statistical modeling, and predictive forecasting for revenue growth and cost optimization.
- Architected and managed 8+ interactive Power BI dashboards, synthesizing 50K–100K transactional records into actionable executive insights across sales, financial, and operational performance metrics.
- Automated and modernized recurring Excel-based variance analyses and reporting processes, eliminating 20–25 hours of manual effort per month and accelerating delivery timelines by nearly 30%.
- Redesigned core operational workflows through gap analysis, root-cause assessment, and As-Is/To-Be process mapping (Visio), resolving bottlenecks across 3–4 key processes and improving turnaround efficiency and cross-team collaboration.
- Spearheaded end-to-end business analysis for 3+ cross-functional initiatives, translating stakeholder requirements into BRDs, user stories, and traceable deliverables in JIRA and Confluence.
- Orchestrated UAT and ERP validation (Microsoft Dynamics/Oracle), converting 15+ requirements into testable specs, driving defect resolution, and enabling high-quality system releases.

PROJECTS

Inventory Forecasting & Optimization | Python, Tableau

- Validated time-series forecasting models using historical sales data to drive inventory planning, demand forecasting, and financial impact assessments, identifying seasonality patterns and demand anomalies.
- Delivered interactive Tableau dashboards to monitor inventory utilization, forecast accuracy, and key performance indicators, enabling data-driven inventory optimization and executive decision-making.

Smart Asset Tracker (CSAT) | Python, SQL, Power BI

- Architected a scalable asset performance analysis framework using SQL and Python-based workflows, conducting utilization and clustering analysis to detect inefficiencies, underused assets, and potential cost-saving areas.
- Created executive-level Power BI dashboards with KPIs, utilization trends, and predictive alerts to support informed decision-making.

TECHNICAL SKILLS

Programming: Python (Pandas, NumPy, Scikit-learn, Matplotlib), SQL (T-SQL), R, VBA
Data Engineering: ETL Pipeline Development, Data Modeling (Tables, Views, Stored Procedures), Data Validation, Data Reconciliation
Databases: SQL Server
Analytics & Modeling: EDA, Statistical & Predictive Modeling, Time-Series Forecasting, Clustering, Anomaly Detection
BI & Visualization: Power BI (DAX, Power Query), Tableau, Advanced Excel (Pivot Tables, Power Query)
Business Analysis : Requirement Gathering, BRD Documentation, User Stories, Gap Analysis, As-Is/To-Be Process Mapping, UAT Coordination
ERP & Enterprise Systems: Microsoft Dynamics, Oracle ERP
Collaboration & Tools: JIRA, Confluence, Microsoft Visio, MS Office Suite
Methodologies: Agile/Scrum, SDLC, KPI Development, Financial & Operational Analysis

EDUCATION

Master of Business Analytics | SACRED HEART UNIVERSITY | CT, USA **August 2024 – December 2025**
