

BHAVISHA REDDY

Plano, TX (Open to Relocate) | +1 (774) 312-9600 | gbhavishareddy@gmail.com

PROFESSIONAL SUMMARY

Data Engineer with 4+ years of experience designing and scaling cloud-based data platforms, building resilient ETL/ELT pipelines, and delivering analytics-ready datasets using Python, SQL, Snowflake, Databricks, AWS, dbt, and Spark. Skilled in data wrangling, dimensional modeling, workflow automation, and large-scale data transformation across cloud environments. Proven experience building and optimizing data pipelines, developing scalable data solutions, and collaborating with cross-functional engineering, analytics, and business teams to drive data-driven decision-making. Passionate about solving complex data challenges, leveraging modern cloud technologies, and delivering high-impact data products in fast-paced environments.

TECHNICAL SKILLS

Languages: Python, SQL, Bash

Cloud Platforms: AWS (S3, Glue, Lambda, EMR, IAM, CloudWatch, Athena), GCP

Data Engineering: Databricks, dbt, Apache Airflow, Spark, PySpark, ETL/ELT Pipelines

Data Warehousing: Snowflake, BigQuery, Redshift

Analytics & Modeling: Data Wrangling, Data Modeling, Pandas, Analytics-Ready Datasets

Business Intelligence & Tools: Power BI, Tableau, Excel, Git, GitHub Actions, Docker, Terraform

EXPERIENCE

Data Engineer | City National Bank, TX, USA

Jun 2025 – Present

- Developed and maintained scalable ETL/ELT pipelines using **Python, SQL, Snowflake**, and AWS services to support enterprise analytics, reporting, and operational intelligence initiatives.
- Built analytics-ready datasets and dimensional data models within Snowflake and cloud analytics environments, improving reporting performance by 55%.
- Built and optimized Databricks and Spark-based data processing workflows to transform, validate, and prepare large-scale datasets for analytics and reporting use cases.
- Developed and maintained **Databricks** notebooks and Spark jobs to automate data transformation, enrichment, and validation processes across multiple enterprise data domains.
- Leveraged **AWS services** including S3, Glue, and Lambda to support automated data ingestion, transformation, and monitoring workflows across enterprise datasets. Designed and supported AWS-based data ingestion and processing architectures leveraging S3, Glue, Lambda, and Snowflake to enable scalable and reliable analytics workflows.
- Performed complex data wrangling and transformation of structured and semi-structured datasets to create analytics-ready data assets for reporting and business intelligence use cases.
- Supported cloud data platform modernization initiatives, integrating AWS-based storage, transformation workflows, and Snowflake analytics environments to improve data accessibility and reporting reliability.
- Automated data validation, monitoring, and quality assurance processes using Python, reducing reporting issues by 70%.
- Designed and optimized Power BI and Tableau dashboards used by leadership teams to monitor operational KPIs, customer engagement metrics, and business performance.
- Collaborated closely with business stakeholders, analysts, and engineering teams to gather requirements and deliver scalable self-service analytics solutions. Maintained data documentation, governance standards, and reporting best practices while mentoring junior team members on SQL optimization and BI development.

Data Analyst | Kaar Technologies, India

Feb 2022 – Jul 2023

- Developed analytics-ready datasets and data transformation models using SQL, BigQuery, dbt, and cloud-based ELT frameworks to support enterprise reporting and analytics.
- Built and maintained scalable ELT pipelines integrating customer and operational data from multiple SaaS applications into centralized analytics and reporting environments.
- Automated data ingestion, transformation, and reporting workflows using Python, SQL, and Apache Airflow, reducing manual effort by more than 10 hours weekly.
- Developed and optimized Databricks, SQL, and dbt transformation workflows to support large-scale data wrangling, analytics-ready datasets, and enterprise reporting requirements.
- Designed and delivered executive-level Power BI dashboards and self-service analytics solutions supporting operational reporting, KPI tracking, and customer analytics.
- Partnered with business stakeholders to translate reporting requirements into scalable data solutions while optimizing SQL transformations through partitioning and clustering strategies, improving dashboard performance by 3x.
- Established data quality validation processes, documentation standards, and knowledge-transfer practices, improving reporting consistency, user adoption, and onboarding efficiency.

Data Analyst | Experion Technologies, India

Jan 2021 – Jan 2022

- Managed laboratory and operational datasets by performing data profiling, cleansing, validation, and quality assurance checks, improving data accuracy by 30% while ensuring compliance with reporting standards and established data governance practices.
- Developed SQL queries, Excel reports, interactive Power BI dashboards to analyze testing and operational data, delivering timely performance metrics and actionable insights that supported researchers and management in data-driven decision-making.
- Conducted data audits, reconciliation, and root cause analysis to identify reporting inconsistencies across multiple datasets, resolving data quality issues and improving the reliability of research outcomes, regulatory reporting, and operational reporting.

EDUCATION

Master of Science in Computer Science

Aug 2023 – May 2025

Clark University, Worcester, MA | GPA: 3.7

PROJECTS

Gen AI Customer Interaction Analytics Platform | Python, SQL, Snowflake, Power BI, OpenAI API/Hugging Face, Pandas

- Developed a GenAI-powered analytics platform that processed 100,000+ customer call and chat transcripts to identify sentiment, customer intent, and recurring service issues.
- Built Python NLP pipelines leveraging Large Language Models (LLMs) and transformer-based frameworks to automate sentiment analysis, intent classification, and customer issue detection.
- Designed optimized SQL models and stored structured outputs in Snowflake to support scalable analytics and reporting.
- Created interactive Power BI dashboards that reduced manual review effort by 75% while enabling business teams to monitor customer satisfaction trends, escalation rates, and issue categories.

Enterprise BI & Insights Platform | SQL, Python, Snowflake, Power BI, dbt

- Built an end-to-end business intelligence platform integrating customer, operational, and engagement datasets into Snowflake. Developed dbt transformation models and optimized SQL queries supporting executive reporting.
- Designed Power BI dashboards with drill-through analysis, forecasting, and KPI tracking capabilities.
- Automated ETL workflows using Python and generated business insights that improved reporting efficiency by **60%**.
- Collaborated with cross-functional stakeholders to translate business requirements into scalable reporting solutions.

CERTIFICATIONS

- AWS certified Data Analytics
- Google Professional Data Engineer Certification
- Generative AI with Large Language Models
