

CHARUDESHNA PATEL

Arlington, TX | (814) 780-1992 | c.deshna23@gmail.com | [LinkedIn](#)

PROFESSIONAL SUMMARY

Data Analyst with 3+ years of experience delivering actionable insights across retail, wholesale, and industrial operations. Skilled in SQL, Excel, Python, Power BI, and Tableau for data cleaning, analysis, reporting, dashboards, forecasting, and statistical testing. Known for automating reporting workflows and translating complex data into clear recommendations for engineering, operations, and business stakeholders.

TECHNICAL SKILLS

- Analysis & Statistics:** EDA, Regression, Clustering, A/B Testing, ANOVA, Hypothesis Testing, Cohort Analysis, Time-Series, Forecasting, Segmentation, Data Analysis
- Languages & Tools:** Python (Pandas, NumPy, Scikit-Learn, Statsmodels), SQL (T-SQL, PL/SQL), R, SAS, Excel (Pivot, Power Query, VBA, Solver), Jupyter, Git, Relational Databases
- Visualization & BI:** Tableau, Power BI, DAX, Looker, Matplotlib, Seaborn, Plotly, ggplot2, KPI Dashboards, Data Storytelling, Executive Reporting
- Data Engineering:** ETL Pipelines, Data Warehousing, Dimensional Modeling, Star Schema, Snowflake Schema, Oracle DB, PostgreSQL, SQL Server, Snowflake, AWS, Microsoft Azure, Google Cloud Platform
- Tools & Methodologies:** JIRA, SAP, Agile/Scrum, Stakeholder Management, Requirements Gathering, MS Office, Google Workspace, Confluence, SharePoint

EDUCATION

University of Texas at Arlington <i>Master of Science, Information Systems</i>	Aug 2024 - May 2026
LDRP Institute of Technology and Research <i>Bachelor of Engineering, Computer Engineering</i>	Aug 2020 - Apr 2024

PROFESSIONAL EXPERIENCE

Dazzle Robotics Pvt. Ltd. <i>Data Analyst</i>	Jun 2023 - Jun 2024 <i>Gujarat, India</i>
- Analyzed and validated 10GB+ of weekly AGV sensor telemetry using Python and SQL across a 50+ vehicle fleet, with automated anomaly-detection workflows that cut incidents 22% across warehouse and logistics floors. - Wrote 80+ optimized T-SQL queries using CTEs and window functions to extract and transform data for nightly ETL; partition pruning reduced average query runtime 65% for logistics and fleet-health reporting. - Conducted EDA, regression, and root-cause analysis on sensor failures, identifying patterns that cut post-deployment defects 25% and saved roughly \$150K annually. - Created Power BI and Tableau KPI dashboards with DAX, row-level security, and drill-through capabilities for fleet health, reducing reporting turnaround from weekly to daily for engineering, safety, and operations stakeholders. - Built an A/B testing framework for routing changes using two-proportion z-tests and uplift modeling, with rollouts lifting throughput 11% at 95% confidence before fleet-wide implementation. - Partnered with engineering and operations leadership to define 25+ KPIs and SLA targets, using monthly executive readouts to accelerate safety-review cycles 35% and shape the quarterly operations roadmap. - Tuned Power BI semantic models with incremental refresh and pre-aggregations, cutting dashboard load time roughly 80% and refresh windows for 30+ users. - Built a governed self-service reporting layer with row-level security and curated datasets, cutting ad-hoc analysis requests 55% across business stakeholders.	
AHC Corporation <i>Data Analyst</i>	May 2021 - May 2023 <i>Gandhinagar, India</i>
- Analyzed and cleaned 2+ years of pharmacy transaction data spanning 500+ SKUs and 50+ vendors using SQL and Excel, with KPI dashboards that reduced stockouts 28%. - Performed vendor performance and margin analysis using Excel PivotTables, regression, and hypothesis testing, generating insights that cut procurement costs by \$40K annually and supported renegotiation with the top 10 vendors. - Automated Power BI and Excel reports for sales, expiry risk, and GST compliance, eliminating 20+ hours per week of manual reconciliation across outlets. - Segmented 10K+ customers by purchase frequency and basket value through ABC/XYZ cohort analysis, while targeted promotions lifted the repeat-purchase rate 26% and improved replenishment planning by outlet. - Developed moving-average, Holt-Winters, and Prophet demand forecasts to support planning, reducing MAPE from 22% to 9% and freeing an estimated \$60K in capital during the monthly demand-planning cycle. - Developed Tableau retail scorecards with parameterized drill-downs and forecast bands, communicating insights that informed category-management decisions and lifted gross margin 15% across retail and wholesale product categories. - Modeled expiry and shrinkage risk across 4 retail outlets and 1 wholesale unit, where proactive restocking and clearance cleared roughly \$35K of aging inventory ahead of quarterly expiry write-offs.	

PROJECTS

Customer Churn Analysis - Telecom Dataset	Jan 2026 - May 2026
- Analyzed 50K+ telecom records using Python and SQL, engineering features and training a logistic regression classifier to model customer churn. - Applied SHAP to identify the top 10 churn drivers and visualized findings in Tableau, projecting \$2.5M in ARR retention from targeted interventions.	
Retail Sales & Revenue Analytics	Sep 2025 - Dec 2025
- Analyzed 18 months of multi-store sales data with SQL cohort analysis to identify seasonality and customer purchasing patterns. - Built Tableau dashboards to visualize sales seasonality and projected a 12% revenue lift from targeted promotional campaigns.	
Document Analytics Pipeline - NLP + ETL	Aug 2023 - Jan 2024
- Built an Azure-hosted ETL pipeline that processes 1,200+ documents monthly with zero errors, automating a previously manual workflow. - Applied transformer-based NLP models that improved extraction accuracy 78% over the manual baseline.	
Road Infrastructure Data Analysis	Feb 2023 - May 2023
- Analyzed road-condition imagery with a YOLOv5 classification model reaching 96% accuracy, persisting results to Oracle DB. - Automated dispatch through Oracle DB triggers, saving 30–40 hours per week and cutting dispatch lag by 2–3 days.	
Driver Behavior Analytics - Computer Vision	Aug 2022 - Jan 2023
- Analyzed facial-landmark signals from OpenCV and MediaPipe to detect driver drowsiness patterns in real time. - Validated 94.78% accuracy using stratified cross-validation across lighting conditions and visualized results in Tableau.	
Real-Time Spam Analytics Dashboard	Jan 2022 - Jun 2022
- Built an end-to-end analytics stack with a Flask data API and SQL persistence layer serving live monitoring for 1,000+ concurrent users. - Delivered Tableau and Power BI dashboards and tuned the classification logic to cut false positives 40% overall.
