SUMMARY

Data analyst with 4+ years of experience in data extraction, transformation, and analysis across healthcare and finance. Led initiatives that reduced healthcare costs by 12% and improved operational efficiency by 10%. Proficient in Python, SQL, R, Power BI, and Tableau, with experience in machine learning, predictive modeling, and cloud technologies (AWS, Azure). Analyzed large datasets to identify cost-saving opportunities and optimize processes, supporting data-driven decisions. Seeking an opportunity to leverage skills in a data-driven company to deliver actionable insights and drive business growth.

SKILLS

Methodologies:	SDLC, Agile (Scrum, Kanban), Waterfall
Languages:	Python, SQL, R, C++, JavaScript
IDEs:	Visual Studio Code, PyCharm, Jupyter Notebook
Packages:	NumPy, Pandas, Matplotlib, SciPy, ggplot2, TensorFlow, Seaborn, Scikit-learn, PyTorch
Visualization Tools:	Tableau, Power BI(DAX), Advanced Excel (Pivot Tables, VLOOKUP), Google Analytics, Qlik Sense
Cloud Technology:	Microsoft Azure, AWS, GCP
Database:	MySQL, SQL Server, PostgreSQL, Oracle, MongoDB
Operating System:	Windows, Linux, Mac OS
Other Skills:	SAS, SSIS, SSRS, Machine Learning Algorithms, Probability distributions, Confidence Intervals, ANOVA, Hypothesis Testing, Regression Analysis, Linear Algebra, Advance Analytics, Data Mining, Data Visualization, EHR, HIPAA, Data warehousing, Data transformation, Data Storytelling, Association rules, Clustering, Classification, Regression, A/B Testing, Forecasting & Modelling, Data Cleaning, Data Wrangling, Jira, Git, Docker

EDUCATION

Master of Science in Data Science - Pace University, New York City, New York, USA.

Bachelor of Engineering in Electronics and Communication Engineering - PES University, Bangaluru, India.

WORK EXPERIENCE

Data Analyst | Northwell Health, NJ

Jan 2024 – Present

- Analyzed healthcare cost data from over **500,000 patient records** across hospitals and clinics to pinpoint the key factors driving medical expenses, such as treatment types, patient demographics, and hospital stay lengths, ultimately reducing overall healthcare costs by **12%**.
- Assessed patient readmission data using **Electronic Health Records (EHR)** by identifying key factors such as diagnosis and demographics. Applied healthcare standards such as **HL7** and **FHIR** for data interoperability, ensuring **HIPAA** compliance while integrating diverse healthcare data sources.
- Employed **Python** to automate data preprocessing, cleaning, and transformation for large-scale healthcare datasets, cutting preparation time by **30%** while ensuring data integrity and accuracy for subsequent cost-related analyses.
- Consolidated structured cost data from hospital billing systems with semi-structured data from patient surveys and feedback, utilizing **SQL** and **MongoDB** to optimize data retrieval and reporting, which decreased processing time by **25%**.
- Created interactive Power BI dashboards to present crucial healthcare spending metrics, including **treatment costs**, **average length of stay**, and **patient outcomes**, empowering stakeholders to make informed decisions and enhancing **budget allocation** by **10%**.
- Engineered Python solutions (Pandas, NumPy, and Seaborn) and SQL for exploratory data analysis of healthcare data, identifying trends and anomalies in patient outcomes and treatment effectiveness to support data-driven clinical decisions.
- Performed **exploratory data analysis (EDA)** to identify spending trends across different treatment categories and patient demographics, uncovering opportunities to streamline resource usage and reduce unnecessary costs by **15%**, while improving operational efficiency by **10%** without compromising patient care.
- Applied **machine learning** techniques, including **regression models** and **clustering**, to predict future healthcare costs based on historical data, identifying patients who could benefit from preventive care and helping reduce **emergency visits** by **15%**.
- Conducted **statistical tests (ANOVA, chi-square)** to assess the effectiveness of cost-saving initiatives and analyze the impact of policy changes on healthcare expenditures, generating actionable insights that contributed to a **20%** improvement in cost management strategies. Also monitoring and reporting on key performance indicators (**KPIs**) related to patient care, hospital efficiency, and cost-effectiveness.

- Collaborated with medical staff and finance teams to pinpoint areas for cost optimization that didn't compromise patient care, resulting in targeted initiatives that reduced treatment costs by **8%** while enhancing patient satisfaction and outcomes.
- Leveraged **AWS** cloud services (**S3, EC2, Redshift**) to scale data storage and processing capabilities, improving the performance of healthcare analytics workflows and reducing infrastructure costs by **20%**, while ensuring secure and efficient data management for large datasets.

Data Analyst | Cognizant, India

Nov 2019 – Dec 2022

- Designed and implemented ETL pipelines using SQL Server Integration Services (SSIS) to extract, transform, and load data from **15+** heterogeneous sources, consolidating **1M+** daily records into a centralized data warehouse.
- Developed SQL Server Reporting Services (SSRS) templates and Power BI dashboards to automate regulatory reports aligned with **BASEL III**, achieving **100% on-time** submission for quarterly filings.
- Cleaned and transformed datasets using SQL and Python (pandas, NumPy), reducing data preparation time by 40% and ensuring consistency across **10+** compliance metrics.
- Implemented robust data quality validation scripts using SQL triggers and stored procedures, detecting and resolving anomalies, resulting in **98%** data accuracy in reporting workflows.
- Collaborated with compliance officers, business analysts, and data engineers to gather requirements and align reporting frameworks with regulatory mandates, including SOX and GDPR.
- Designed automated alert systems in Power BI to track compliance KPI deviations, improving issue identification and resolution by 20%. Developed Excel VBA macros to generate ad-hoc compliance reports, cutting report generation time by 50% for urgent regulatory queries.
- Followed Agile-Scrum methodology, participated in sprint planning, backlog grooming, and daily stand-ups, ensuring timely delivery of project milestones and task prioritization.
- Conceptualized MATLAB models to analyze test data and optimize design parameters, improving overall ECU performance by **18%**.
- Achieved **40%** improvement in reporting efficiency, **30%** reduction in data discrepancies, and **100%** adherence to regulatory deadlines, avoiding potential penalties and strengthening client trust.

PROJECTS AND VIRTUAL WORK SIMULATIONS

Capstone Project (AI-Based Lumbar Spine Condition Classification using MRI)

- Developed a multi-model ensemble system using PyTorch with custom CUDA-enabled CNNs, integrating EfficientNet and ResNet architectures to classify lumbar spine conditions with **93% accuracy** on a dataset of **40,000+ MRI scans**. Implemented transfer learning and hyperparameter tuning to optimize model performance.
- Engineered a deep learning pipeline incorporating advanced image preprocessing techniques such as CLAHE, adaptive filtering, and data augmentation, reducing processing time by **12%** while improving feature extraction and classification accuracy.
- Deployed and optimized the model on AWS using S3 for data storage and EC2 instances with GPU acceleration, streamlining inference workflows for real-time diagnostics. Integrated Grad-CAM for explainability, enabling clinicians to interpret model predictions with visual heatmaps.

Advanced Financial Data Analysis and Predictive Modeling System

- Developed a machine learning framework for sentiment analysis using NLP techniques (BERT, VADER, and TF-IDF) to process financial news and social media data, improving **stock price prediction accuracy by 29%**. Implemented time-series forecasting models (ARIMA, LSTM) to enhance predictive performance.
- Designed an interactive Flask-based dashboard that integrates real-time stock market trends, sentiment analysis, and predictive insights, improving decision-making speed by 45%. Leveraged Plotly and D3.js for data visualization.
- Deployed the system on AWS with a scalable architecture, utilizing EC2 for computation, S3 for data storage, and Lambda for automated data ingestion. Implemented asynchronous batch processing to handle **100,000+ news articles daily**, ensuring real-time sentiment analysis and accurate market insights.
