PROFILE

Dedicated military war veteran and former Signals Intelligence Analyst(35N) with a passion for data science and data storytelling. Equipped with a proven track record of utilizing advanced intelligence analysis techniques to extract valuable insights from complex datasets. Possesses a deep understanding of signal collection and analysis methodologies, honed through years of service in high-pressure and mission-critical environments. Eager to transition into the dynamic world of data science, leveraging a strong foundation in statistical analysis, programming, and machine learning. Proficient in various data manipulation and visualization tools, with a keen eye for identifying patterns and trends that drive data-based decision-making. Enthusiastic about applying military discipline and adaptability to excel in the fast-paced and ever-evolving field of data science. Seeking a challenging role that encourages creativity, innovation, and continual learning, as I contribute my unique blend of military expertise and data science acumen to drive success and growth for a forward-thinking organization.

EDUCATION

Master of Data Analytics 04/2024 – 02/2025
Western Governors University(WGU)

Data Science Program 01/2023 – 06/2023
Codeup
Fully-immersive, project-based 20-week career accelerator that provided me with 670+ hours of expert instruction in applied data science. Developed expertise across the full pipeline (planning, acquisition, preparation, exploration, modeling, storytelling), and became comfortable working with real messy data to deliver actionable insights to diverse stakeholders.

Full Stack Software Engineer 11/2022 – 01/2023
TrueCoders
Full-stack software engineering program with a focus on C#, project-based 9-week career accelerator. The course covered the full software development cycle. I gained experience with HTML, CSS, JavaScript, ASP.Net , and SQL. Projects were developed in VS code and Visual Studios Community.

Bachelors of Science in Information Technology 05/2011 – 05/2014
Colorado Technical University

PROJECTS

Beyond The Fairway 🌐
PGA Dataset(Time Series Analysis)
A continuation of Birdie Eye View, picking up from 2023 until 2025. Reviewing the USGA's proposed rule change of the golf ball roll back. Using time series analysis, the aim is to update and forecast on new data since our last analysis and forecast future driving distance average.

Birdie Eye View 🌐
PGA Dataset(Time Series Analysis)
The USGA is proposing a rule change to the game of golf. They are suggesting that technology will eventually allow the average pga tour player to exceed the current driving distance regulation of 317 yards. By using time series analysis to make predictions, our project aims to investigate if the average tour golfer's driving distance will exceed the current standard, when we could expect this to occur, and how it could impact professional golf.

What-s-Trending 🌐
Github Dataset(Natural Language Processing)
The goal of this project is to predict a repositories programming language. We plan to use only the readme text with any indication of the programming language being removed from the text. Our machine learning model will use theses parameters to predict and will be evaluated for accuracy.

DCWineCo 🌐
Wine Dataset(Clustering)
This project uses a dataset of Portuguese vinho verde wines that were rated on a ten point quality scale by three experts. Each wine also was tested to measure 11 different physiochemical properties. The aim of this project is to assess whether perceived quality of wines can be predicted by a machine learning model derived from these properties. Wines are divided into general categories of white and red, both from variants of the same grape.

WORK EXPERIENCE

Predictive Analyst

09/2023 – present

Nika

- Designed and developed interactive Tableau dashboards to visually represent complex healthcare data, making it accessible and actionable for non-technical stakeholders.
- Utilized SQL queries to extract and transform complex healthcare data from various sources, ensuring data accuracy and consistency creating a reliable foundation for predictive analytics.
- Leveraged Tableau to create dynamic reports that facilitated evidence-based decision-making at various levels of the organization

Land Surveyor Crew Chief

07/2017 – 11/2022

SGC Engineering

- Led and supervised survey teams in conducting accurate and efficient topographic and boundary surveys for various construction and development projects
- Successfully managed and completed complex land surveying projects, ensuring compliance with project timelines, budget constraints, and quality standards.
- Expertly operated and maintained a wide range of surveying instruments, including total stations, GPS receivers, levels, and data collectors, ensuring accurate and reliable data collection during fieldwork.
- Collaborated closely with survey party chiefs and project managers, assisting in the planning and execution of various land surveying projects, resulting in the timely completion of project milestones.

Database Administrator

05/2015 – 07/2017

Pearson

- Implemented robust database security measures, including user access controls, encryption, and auditing, to protect sensitive data and comply with regulatory requirements.
- Successfully planned and executed database migration projects, seamlessly transferring data and applications to new environments while minimizing downtime and ensuring data consistency.
- Streamlined database operations by optimizing SQL queries, indexes, and database structures, resulting in significant improvements in query performance and reduced system downtime.

Application Support Analyst

05/2014 – 05/2015

Pearson

- Provided efficient and timely resolution of application-related issues, consistently meeting or exceeding service level agreements (SLAs) and ensuring minimal disruption to business operations.
- Successfully managed a high volume of support tickets, effectively prioritizing and categorizing issues, resulting in improved ticket management and faster response times.
- Developed and maintained comprehensive knowledge bases and documentation for supported applications, enabling end-users to find self-help solutions and reducing the need for repeat support requests.

MILITARY EXPERIENCE

Signals Intelligence Analyst(35N)

05/2007 – 05/2011

United States Army

- Analyzed and interpreted intercepted communications and electronic signals in support of military operations, providing critical intelligence to enhance situational awareness and decision-making on the battlefield.
- Collaborated with multi-agency intelligence teams to collect, process, and disseminate time-sensitive signals intelligence (SIGINT) data, contributing to successful counterterrorism and counterinsurgency missions.
- Utilized advanced SIGINT tools and software to exploit various communication platforms, resulting in the discovery of high-value targets and their associates.
- Trained and mentored junior analysts in SIGINT analysis techniques and tools, fostering a skilled and cohesive intelligence team.

TECHNICAL SKILLS

- | | | | |
|-------------------------------|-----------------------|------------------------|---------------------|
| • Data Mining | • Data Wrangling | • Data Cleansing | • Data Storytelling |
| • Pattern Recognition | • Data Visualizations | • Dashboards | • ETL Pipeline |
| • Statistical Data Analysis | • Data Ethics | • Project Management | • Web Scraping |
| • Applied Statistics | • Machine Learning | • Classification | • Regression |
| • Natural Language Processing | • Clustering | • Time Series Analysis | • Anomaly Detection |

TOOLS

- | | | | |
|--------------------------|-------------------|---------------|-----------------|
| • Python | • SQL | • Pandas | • NumPy |
| • Tableau | • Microsoft Excel | • Power BI | • Visual Studio |
| • Microsoft Office Suite | • Spark | • SciKitLearn | • Seaborn |
| • Matplotlib | | | |
