EDUCATION

University of Nevada, Las Vegas

Las Vegas, Nevada

B.S. Computer Science

August 2021 - Dec 2025

- **CGPA:** 3.715, *Dean's List*
- **Related Coursework:** Data Structures & Algorithms, Programming Languages, Operating Systems, Machine Learning, Database Management, Software Product and Design, Information Assurance, Computer Networks.

The Odin Project

Online Course

Self-Paced Web Development Curriculum

Dec 2024 - Current

- Covered HTML, CSS, JavaScript, and Git learning through project-based learning curriculum.
- Built interactive web applications and learned the fundamentals of web development.

WEB PROJECTS

Scheduler Web App

Functional Web Application

JavaScript

August 2025 - November 2025

- Developed a web-based employee scheduling tool for a local Las Vegas hospitality business with a Javascript engine.
- Implemented form parsing, dynamic DOM rendering, and event-driven updates to auto-generate weekly schedules.
- Designed data structures for employee availability, role assignment, and shift fairness balancing.
- Delivered a tool improving schedule accuracy and reducing manager time spent on manual scheduling.
- Collected and applied real-world user feedback to improve scheduling demands and identify bugs.

Landing Page

Online WebPage

HTML, CSS

Dec 2024 – March 2025

- Built a responsive landing page using HTML & CSS, following best practices for layout and typography.
- Implemented flexbox for CSS layout structures for dynamic sizing and spacing.

UNLV PROJECTS

ROS 2 Automatic Braking System Safety Node

F1-tenth Node

CS 489 Project

February 2025

- Designed an ABS system on an RC car using LiDAR scanners to detect obstacles and modulate braking.
- Developed a safety node to process LaserScan and Odometry data for emergency braking.
- Demonstrated using Docker while continuing to develop autonomous racing algorithms in team settings.
- Collaborated with others to engineer autonomous driving on given routes.

Espresso Compiler

Espresso Compiler in Java

CS 460 Project

Jan 2025- May 2025

- Developed a compiler for a simplified Java-like language using Java.
- Validated functionality using unit tests to ensure correct implementation.
- Creates an environment to help understand restrictions and rules of languages.

Other Work Experience

Sorry Not Sorry

Part-Time Job

Customer Service Team Member

Oct 2023- Present

- Provided customer service in a fast-paced retail environment, emphasizing communication and teamwork.
- Diagnosed and resolved customer issues efficiently, applying problem-solving and interpersonal skills

SKILLS

Programming: C++, Java, Python, C

Web Development: HTML, CSS, JavaScript, Git

Tools: CLion, IntelliJ, PyCharm, VScode, Git, GitHub
