DATA ANALYST

Data Analyst with 3+ years of experience transforming complex, high-volume datasets into actionable insights for product, engineering, and leadership teams. Strong expertise in SQL, Snowflake-style data modeling, Power BI/Tableau, and KPI development. Proven ability to translate ambiguous business questions into clear analytics deliverables, automate reporting, and drive data-informed decision-making in fast-paced environments.

CORE ANALYTICS & TECHNICAL SKILLS

- **SQL (Advanced):** CTEs, window functions, multi-table joins, aggregations, query optimization
- **BI & Visualization:** Power BI, Tableau, KPI dashboards, executive reporting
- **Data Modeling:** Star & Snowflake schemas, dimensional modeling, metric frameworks
- **Data Stack:** dbt (conceptual & hands-on exposure), Snowflake-style warehouses, AWS (S3, Redshift, EMR), Spark
- **Analytics Techniques:** Trend analysis, variance analysis, anomaly detection, KPI monitoring
- **Programming:** Python (pandas, numpy – intermediate), Excel (Power Query, Pivot Tables)
- **Collaboration:** Product & Engineering partnership, stakeholder communication, requirements translation

EDUCATION

M.S. in Computer Science - Boise State University

Expected May 2026

GPA: 4.0

B.S. in Computer Science - Kathmandu University

2017 – 2022

GPA: 3.33

PROFESSIONAL EXPERIENCE

Data Analyst Intern

Educational Access Center, Boise State University

Jun 2025 – Present

- Built and enhanced analytics systems and dashboards using SQL, Excel, and Power BI to support operational and leadership decision-making.
- Designed dimensional data models and Power Query transformations to enable reliable KPI tracking (utilization, turnaround time, cost efficiency).
- Cleaned, validated, and transformed data from multiple sources, improving data accuracy by 20%.
- Automated manual reporting workflows, reducing preparation time by 60% and enabling self-serve analytics for stakeholders.
- Partnered with cross-functional teams to translate vague business questions into concise analytical outputs.

Team Lead – U.S. Healthcare Data Engineer

Cedar Gate Services

Apr 2023 – Aug 2024

- Served as the analytics lead and primary data partner for operations, compliance, and engineering stakeholders.
- Built and optimized large-scale SQL and Spark ETL pipelines on AWS EMR supporting claims, member, and provider datasets.
- Developed operational KPIs and dashboards (volume, turnaround time, productivity, cost drivers) used by leadership to guide performance decisions.
- Implemented data quality checks, anomaly detection, and reconciliation frameworks, improving reporting reliability across teams.
- Mentored analysts on SQL best practices, metric definitions, and data validation, helping scale analytics maturity across the organization.

Associate Data Analyst

Cedar Gate Services

Apr 2022 – Apr 2023

- Built and maintained SQL-based reports and BI dashboards for healthcare clients.
- Performed data cleansing, modeling, and validation to ensure accuracy of operational and performance metrics.
- Automated recurring analytics workflows, saving 10+ hours per week of manual effort.
- Supported ad-hoc analytics requests and translated findings into clear, actionable summaries.

Technical Help Desk Specialist (Operations Support)

Boise State University

Aug 2024 – Aug 2025

- Supported 50+ monthly requests related to systems, data access, and reporting workflows.
- Created documentation and SOPs that reduced repeat requests by 15%, improving operational efficiency.
- Assisted with access controls and permissions, maintaining data integrity for analytics systems.

PROJECTS

Customer Churn & KPI Analytics Dashboard

Power BI, DAX, SQL

- Built an end-to-end analytics solution integrating demographic, credit, and activity data.
- Developed 30+ DAX measures and KPI frameworks, improving churn visibility by 28%.
- Enabled leadership to simulate retention strategies with up to 15% projected churn reduction.

Operational & Sales Insights Analytics

MySQL, Power BI, Power Query

- Cleaned and modeled large datasets to identify revenue trends and underperforming regions.
- Automated reporting pipelines, reducing manual effort by 60% and improving decision speed.

National Health Analytics Dashboard

Power BI, SQL

- Consolidated fragmented healthcare datasets into a single source of truth for performance and cost analysis.
- Designed multi-page executive dashboards enabling drill-downs by hospital, condition, and insurance type.
- Reduced analysis turnaround time by 65% and improved decision accuracy by 20%.

CERTIFICATIONS

- Microsoft Power BI for Advanced Data Analysis
- SQL (HackerRank)
- Data Analyst with Python – DataCamp
- Introduction to Tableau – DataCamp
