EDUCATION

University of San Diego | GPA 3.57

Sep 2021 – May 2025

B.S. in Computer Science – Concentration in Data Science and Artificial Intelligence

San Diego, CA

Minor in Cognitive Science

AWARDS

1st Place – USD Tech Entrepreneurship Challenge | Computer Vision – Python

2025

- Awarded grand prize of \$10,000 for FishEye, an AI-powered solution combating overfishing through automated fish detection and counting
- Improved monitoring efficiency by developing a real-time fish detection and tracking system using YOLOv8
- Enhanced object tracking accuracy through spatial relationship analysis and class consistency voting
- Engineered a Flask web app visualizing detection results and video processing
- Applied user-centered design approaches with customer research to develop an effective and efficient consumer dashboard

2nd Place Geocomputational Thinker – Big Data Hackathon | Python

2024

- Collaborated with a partner to develop a product in one week with the hackathon theme of utilizing big data to help consumers manage their health
- Engineered a React web-app with Mapbox that analyzes environmental and GIS datasets, recommending outdoor locations based on distance and environmental quality
- Automated human-readable daily outdoor plans by pipelining GIS metadata and environmental metrics to the OpenAI API
- Presented and showcased our hackathon project competing against 60+ teams, winning 2nd place for the Geocomputational Thinker award

WORK EXPERIENCE

Membot, Remote | Backend Developer, Contract

June 2023 - August 2023

- Solely designed and developed a software product that facilitates the management of ERC20 tokens within a secure Discord bot
- Built functionality to allow users to buy, sell, and view the tokens in their wallet with various settings for slippage and fee limits
- Given the importance of security with a crypto-related project, I ensured the system was bulletproof and private keys were accessible only to the root user

LexAIO, Remote | Backend Developer, Contract

January 2020 - August 2021

- Reverse engineered E-commerce sites such as Amazon and Topps to automate purchasing of exclusive items
- Overcame anti-bot detection by implementing a custom request client with a browser-similar fingerprint in Go, using gRPC to communicate with our primary JavaScript backend environment
- Interacted with a variety of APIs, leveraging them to retrieve product data essential to the purchasing software
- Collaborated in an Agile team of 4 developers, enhancing software reliability and user experience, directly supporting over 500 active users

PROJECTS

Predicting NBA Player Salaries | Data Analytics & Prediction – Python, Jupyter Notebook

2024

- Cleaned and normalized public Kaggle datasets recording yearly statistics of NBA players along with their salary
- Optimized model accuracy and reliability through feature engineering, extensive testing, and comparative analysis; selected XGBoost as the optimal predictive model
- Delivered a structured and documented Jupyter Notebook to easily share our findings and allow for future updates

TECHNICAL SKILLS

Languages: JavaScript (NodeJS, Next.js, React, Electron), Python, C, Java, SQL, Go

Developer Tools: Git, MongoDB, Amazon Web Services (AWS), GCP, Heroku, VIM, Postman, Tableau, Selenium

Technologies/Frameworks: Charles, GitHub, Linear, Jupyter Notebooks, Pandas, Scikit-Learn, YOLO
