DESCRIPTION

Data Scientist with Finance and Fintech Expertise:

Dynamic Data Science graduate with a strong focus on finance, fintech, and analytics. Proficient in Python, R, SQL, and Power BI, with experience in financial modeling, risk management, and investment strategy analysis. Skilled in applying advanced techniques like TF-IDF, predictive modeling, and Monte Carlo simulations to analyze financial data and solve industry challenges. Developed impactful projects, including a Fake News Detection system and a global sales prediction model for video games, combining technical expertise with practical applications.

Demonstrated proficiency in financial risk management through certifications in fintech and banking services. Deep knowledge of stock market concepts, portfolio management, and cryptocurrency fundamentals. Adept at leveraging tools such as TensorFlow and Scikit-learn for advanced data processing and predictive analytics. Passionate about applying data-driven insights to optimize financial strategies, mitigate risks, and drive business success in the rapidly evolving financial sector.

EDUCATION

Kent State University, Kent, Ohio	05/2025
<i>Master of Science, Data Science, 3.71 GPA</i>	
Indian Institute of Management, Visakhapatnam, India	12/2024
<i>Fintech and Risk Management in Banking and Financial Services</i>	
Vellore Institute of Technology, Amaravati, India	05/2023
<i>Bachelor of Technology, Computer Science specialization in Data Analytics, 8.20 GPA</i>	

PROFESSIONAL EXPERIENCE

Eastway, Kent, Ohio (Part-time)	08/2023
<i>Role: Admin</i>	
I managed Excel sheets by filling in names and assigning roles to team members. This ensured the information was well-organized and up-to-date, which made it easier for the team to track responsibilities and maintain clarity.	

PROJECTS

Fake News Detection	12/2024
Developed a Fake News Detection system using Support Vector Machine (SVM) and Attention-based Neural Networks to classify news articles as real or fake.	

- Pre-processed text data with techniques like text cleaning, tokenization, and lemmatization, and extracted features using TF-IDF for SVM and deep learning for the Attention-based model.
- Evaluated model performance using metrics such as accuracy, precision, recall, and F1-score, with visualizations like confusion matrices and learning curves.
- Contributed to addressing misinformation by identifying effective approaches to fake news detection, balancing efficiency and adaptability to complex text patterns.

Predicting the Highest Sold Game in the World from Sales Dataset using R

11/2024

- Conducted a comprehensive analysis on global video game sales, exploring bootstrapping and the 95% confidence interval for the top 50 selling games based on Global_Sales data.
- Evaluated the predictive performance of a linear model using cross-validation to assess global sales trends across different video game genres.
- Utilized regression analysis to identify significant interactions between variables such as platform and genre to predict global sales.
- Applied Monte Carlo simulation to estimate the distribution of North America sales for specific game genres and visualize potential outcomes for strategic decision-making.

Risk Management

10/2024

- Conducted a comprehensive Risk Management project to identify, assess, and prioritize risks, aiming to minimize potential negative impacts on business operations.
- Implemented key risk management processes, including risk identification, assessment, analysis, response planning, and monitoring and control to ensure project success.
- Focused on enhancing the probability and impact of positive events while minimizing the risks associated with negative events throughout the project.
- Applied risk treatment strategies to mitigate identified risks, developing response plans and tracking their effectiveness to ensure successful project execution.

Automated Vehicle Log System

8/2024

- Developed an Automated Vehicle Entry System using Automatic Number Plate Recognition (ANPR) to enhance security and efficiency in parking garages, toll booths, and gated facilities.
- Integrated OCR technology to automatically read and recognize vehicle license plates, converting them into text and comparing them with a database of authorized vehicles for access control.
- Focused on improving system efficiency by automating vehicle entry and exit, reducing manual processes, and enhancing the speed of operations.
- Enhanced security by ensuring that only authorized vehicles could access facilities, with applications in toll collection, parking enforcement, and tracking vehicles involved in criminal activities.

SKILLS

- **Programming Languages:** Python, R, SQL
- **Libraries/Frameworks:** TensorFlow, NumPy, Pandas, Scikit-learn
- **Tools:** Power BI, Microsoft Excel, Microsoft Word
- **Techniques/Methods:** TF-IDF, Predictive Modeling, Statistical Analysis
- **Domains:** Cryptocurrency, Financial Modeling, Stock Market Concepts
- **Other Skills:** Portfolio Management, Investment Strategies, Payment Systems, Digital Wallets

CERTIFICATIONS

Executive Certificate Program in Fintech and Risk Management in Banking and Financial Services

– Indian Institute of Management, Nov 2024
