EDUCATION

University of Maryland, Robert H. Smith School of Business

College Park, MD, USA

Master of Science in Information Systems

December 2025

- Placed second out of 25+ teams in the AI in Business Case Competition
- Data Processing and Analysis using Python, Data Models and Decisions using R, Cloud Computing and Big Data, Designing AI Systems (LLMs)

Mahindra University, Ecole Centrale school of Engineering

Hyderabad, India

Bachelor of Technology in Computation and Mathematics

October 2020 - June 2024

- Data Structures and Algorithms, Natural Language Processing, Mathematics for Machine Learning
- Placed 118 out of 2000+ teams in Google's Machine Unlearning competition

TECHNICAL SKILLS

Languages & Tools: Python, SQL, R, Tableau, PowerBI, NumPy, Pandas, TensorFlow, PyTorch, Microsoft (Excel), NoSQL, MongoDB, Neo4j, Hadoop,

AWS SageMaker, AWS (S3, EC2, RDS), Langchain, Microsoft Azure, MLflow, PySpark, SnowflakeDB

Certifications: Enterprise Risk Management L-1, IBM Data Science Professional, Data Analytics (KPMG), ChatGPT Prompt Engineering for Developers

PROJECT EXPERIENCE

AI in Business Case Competition

- Leveraged ethical AI solutions to support JD Clark, a local Real Estate Company to improve user data collection and create dynamic user experiences.
- Developed prototype for an improvised chatbot, implemented google analytics on the JD Clark website, used AI tools like Scalnut for rapid content creation and Heygen AI for AI-generated videos to enhance client engagement along with a pricing strategy of less than \$2400 annually to integrate the solutions. As a result, JD Clark can anticipate an increase in revenue from its development sector by 25-30%

Ridemate Mobility – AI-Driven Transit Demand Forecasting

- Built a real-time data pipeline processing over 1M+ records using Apache Kafka and PySpark for transit forecasting, integrating CitiBike, subway, event, and construction datasets on Google Cloud.
- Developed interactive dashboards and geospatial maps (Streamlit, Folium, Neo4j) that visualized demand surges across 200+ stations, improving insight delivery for peak-hour and event-driven transit usage.
- Implemented ML models with 90%+ accuracy in predicting hourly transit demand, enabling early identification of mobility bottlenecks and supporting data-driven decisions for public agencies.

Scalable NLP System for Customer Sentiment & Feedback Analysis in Beauty Industry

- Built an AI-based review analysis tool by classifying 1,000+ beauty product reviews using RoBERTa, achieving 93.8% accuracy for positive sentiment to extract structured insights at scale.
- Applied NMF topic modeling to uncover 5 key themes, enabling product teams to go beyond sentiment and understand root causes behind feedback.
- Merged sentiment labels with product metadata (brand, rating, shades) to identify brand-level satisfaction trends and gaps; visualized insights in an interactive Streamlit dashboard for strategic decision-making.

WORK EXPERIENCE

Healthtech Solutions LLC

Kentucky, USA

Data Analyst Intern

May 2025 – Current

- Automated data cleaning processes using Python, reducing manual effort by 40% and ensuring consistent data quality for healthcare analytics.
- Developed interactive Power BI dashboards integrated with predictive analytics to visualize healthcare trends, enabling data-driven decision-making for stakeholders.
- Designed and implemented data models in Snowflake, optimizing data storage and retrieval for AI-driven healthcare applications.

Nxtwave Technologies

Hyderabad, India

Generative AI Intern

February 2024 – May 2024

- Implemented AI driven solutions using open-source models such as Gemma to streamline content creation and reduced the time to generate content by 50%.
- Developed content for the aptitude curriculum assessments which included engaging training modules designed for students across the country preparing for job interviews and aptitude exams.
- Developed generative AI systems using open-source LLMs to streamline content creation and designed prompts for LLMs to improve content generation accuracy.

Virtual Sense Global Technologies

Pune, India

Research Intern

March 2023 – August 2023

- Worked with the research team to develop an algorithm for sleep and stress analysis using Python.
- Used open-source codes for heart-rate variability analysis and made necessary modifications.
- Designed a detailed plan on how to build a recommendation system for a healthcare application.

LEADERSHIP AND VOLUNTEER EXPERIENCE

Hult Prize at Mahindra University

September 2022 – June 2023

- Oversaw marketing and anchoring for events to increase engagement among peers.
- Captain of University Soccer team
- Secretary General of Model United Nations hosted in University
