SUMMARY

Electrical engineer passionate about renewable energy and with commercial and utility-scale solar development experience, driven to leverage data analyses to lead the design, direction, and optimization of innovative solutions.

EDUCATION

Bachelor of Science in Electrical Engineering - Electronics, *University of Houston*

May 2020

PROFESSIONAL EXPERIENCE

Project Engineer (PJM), *AES Corporation*

May. 2025 – Current

- Leads early stage engineering scope development, third party consultant coordination, and contract negotiation for 30% deliverables; currently expanding scope to 60% and up to IFC deliverables.
- Conducts in-depth technical design reviews along SME's to drive value engineering and owner mindset by considering optimizations in civil and electrical sets.
- Mentors development engineers on constructability considerations, including site access logistics, existing infrastructure proximity, landowner obligations, and permitting timelines/requirements.
- Manages RFIs, submittals and technical correspondence on Procore in accordance with contractual timelines to ensure alignment between internal and external consultants.
- Generates PVsyst production profiles and BESS dispatch models to establish baseline energy yield estimates to inform project economics relative to hurdle rate requirements.

Development Engineer, *AES Corporation*

May. 2023 – Current

- Supported business development team for RFPs, greenfield development by creating technical deliverables (production, dispatch models) and coordinating with external consultants for 30% designs.
- Provided technical diligence for new project opportunities and kicks-off project discussion while assessing relevant site inputs such as ALTA, hydrology, geotech, town zoning laws, wetland surveys.
- Lead a comprehensive revamp of current interconnection processes across modeling, interconnection, HV engineering teams by creating an automated excel based template for NYISO, MISO, PJM, markets.
- Developed python-based PV soiling calculations implementing the Townsend snow soiling model and sourcing precipitation data from solaranywhere, NOAA, and PVSyst.

Project Engineer, *Standard Solar Inc.*

Jan. 2022 – May 2023

- Developed large-scale commercial/utility PV + BESS systems (PV avg. 5 MW AC) and produces AHJ/utility documentation to complete 30% designs required for permitting and interconnection applications.
- Competed with other commercial PV design companies to win RFP bids and collaborates with finance teams to produce cost models that model long term ownership.
- Coordinated with senior engineers to modify developed projects at the 30% level to meet NEC code requirements, SSI tech specs, along with modifying designs to align with current supply chain constraints.

SKILLS

- Aurora Solar, NREL SAM, Helioscope, PVCase, PVsyst, Quickbase, Solaranywhere
- AutoCAD, Anderson Optimization, Bluebeam Revu, Procore, Sketchup
- Google Suite, Microsoft Suite, Python, SQL
- Bilingual – English, Spanish
