PROFESSIONAL EXPERIENCE

Fulton Market group

Data Analyst with Software Development Experience

Nov 2023 – Feb 2025 | Chicago, IL

- Developed and maintained RESTful APIs using Python (Flask) for automated data (ETL) across internal systems. Integrated PostgreSQL databases for efficient data storage, retrieval, indexing, query optimization and schema normalization.
- Optimized SQL queries and database structures, improving data processing speed by 30%, and accelerating operational reporting, data validation workflows, and analytical processing across procurement, inventory and logistics data.
- Integrated AWS services (S3, Lambda) for cloud-based data pipelines and automation workflows supporting the analytical reporting process. Automated repetitive tasks using Python scripts, reducing manual work by 40% across teams.
- Built and delivered interactive dashboards using AWS QuickSight, Power BI, and Redshift providing stakeholders with real time insights into operational & financial data, improving decision making process & performance monitoring capabilities.
- Enhanced Python-based data validation scripts leveraging logging frameworks, checksum comparisons and anomaly detection techniques to reconcile incoming data feeds with system logs and ensuring schema enforcement across multi-sourced pipelines.
- Collaborated closely with business teams to gather reporting requirements, ensuring data pipelines, dashboards, and analytical outputs aligned with operational goals, improving data accuracy and procurement tracking and forecasting precision.

CPS Testing Examiner and Graduate Peer Mentor

Illinois Institute of Technology.

Sep 2022 – May 2023 | Chicago, IL

- Proctored standardized tests for 50+ CPS students per session managed scheduling for four daily sessions and assisted over 90 students with academic processes, test-related support and individualized guidance and performance tracking at Illinois Tech.
- Guided incoming graduate students with academic planning and registration, contributing to a 20% increase in enrollments.

Customer service specialists and IoT Developer

Tata Consultancy Service

Jan 2020 -Dec 2020 |Chennai, India

- Coordinated logistics for distributing 1000+units, optimizing supply chain workflows using inventory tracking & real time updates.
- Researched IoT use cases, focusing on sensor integration, real-time data streams for enhanced operational optimization.
- Developed on IoT-based fire alarm system using sensors and real-time alerts, improving safety monitoring for a 5-story.

TECHNICAL SKILLS

Programming and tools: Python, SQL, JavaScript, Excel R, HTML, CSS, Cloud Computing, PostgreSQL, SQL Server, Docker, Kafka, Hadoop, VS Code, Git, PowerBI, AWS Quick Sight (S3, Lambda, EC2), Tableau, API Testing, Data Mapping, Integration testing.

Other skills: Managing databases, Data Engineering, Utilizing attribution, Dashboard Design, Data Modelling, Teamwork.

EDUCATION

Master of Computer Science, *Illinois Institute of Technology.*

August 2023 | Chicago, IL

Relevant Coursework: Computer networks, Object Oriented Analysis and design, Mobile Application Development, Data Analysis Algorithm, Advance Database Organization. Extra-Curricular: Layout editor and writer in Tech news.

Bachelor in information technology, *Jeppiaar Engineering College*

May 2021 | Chennai, India

Relevant Coursework: Operating Systems, Cloud Computing, Python, Web Development, Data structures, Software engineering, big data analysis. Extra-Curricular: Community service head (Rotaract Club), Error 404 (Runner up).

PROJECTS

- **Speech Classification and Emotion Recognition Using ML:** Built a deep learning speech recognition system using RNN and spectrogram features and attention mechanism, achieving 99.2% accuracy across 100+ hours of multilingual audio, with gender classification and speaker identification; developed an NLP-based sentiment analysis pipeline and word embeddings to classify emotions from social media data, providing insights for customer sentiment tracking and brand management.
- **Export Shipment Dashboard:** Developed an export shipment dashboard by extracting data from PostgreSQL using complex SQL queries with multi-table joins and aggregations; built calculated fields to track on-time delivery, transit times & lead time variances, reducing manual data collation by 60%; automated data pipelines using AWS Lambda, CloudWatch and S3 to trigger model retraining, ensuring performances stayed accurate as new data flowed in.
- **Automated Data Processing and API Development:** Streamlined data integrations workflows by breaking down complex pipeline features into smaller, trackable engineering tasks, enhancing delivery speed across reporting and analytical projects; applied adaptive planning and agile release strategies to prioritize high-impact data pipelines & dashboards, maintaining 95% accuracy while aligning with evolving business, data governance standards and ETL best practices.
- **Procurement and Supply Chain Analytics Platform- FMG :** Developed and deployed AWS QuickSight dashboards integrating procurement and supplier performance data to provide real-time visibility into purchase orders, shipment status, and cold storage utilization; built Python scripts to automate data validation by cross-checking procurement feeds against system logs & detecting anomalies; collaborated with procurement, finance, and operation teams to gather requirements, translating them into optimized SQL views and dynamic datasets aligned with procurement KPIs & supply chain monitoring.
