

Name: Felix Foncham Azoh
Address: 10012 Passage Drive, Upper Marlboro, MD 20772
Tel: (240) 645 2564
Email: fazoh2020@gmail.com
Skype ID: live: cid.c5b0f1f4c347f9d7

Summary of Qualifications:

A self-motivated Cloud (AWS and Azure) Engineer offering about 9 years of experience in Cloud/Linux/ environments with proficiency in cloud orchestration, security, identity & access management, monitoring and event management, governance & compliance, application delivery, data protection, image and patch management, self-service and ops analytics in AWS and Azure platforms.

Technical Skills and Technology Stack:

- **Cloud Orchestration/Automation:** AWS CloudFormation, AWS Lambda, AWS Systems Manager, AWS SSM Parameter Store, Ansible, Docker
- **AWS Security:** AWS Security Hub, AWS Guard Duty, AWS Shield, AWS Firewall Manager, AWS Inspector, etc.
- **Monitoring & Event Management:** AWS CloudWatch (Events & Logs), AWS SNS, AWS S3
- **Identity & Access Management:** AWS Organization, AWS IAM, AWS AD Connector, Active Directory, AWS Workspaces, AWS Secrets Manager, etc.
- **Governance & Compliance:** AWS Config Rules, AWS Organization, AWS Control Tower, AWS Trusted Advisor, AWS Well-Architected Tool, AWS Budgets, AWS License Manager, etc.
- **Programming Languages:** JSON, YML, Python, Terraform
- **Azure Alerts:** Sitting up Azure monitoring and alerting, creating alert roles, and Action groups using Terraform.
- **SQL Warehouses (Endpoints):** Managed, SQL-optimized compute clusters within Databricks for fast SQL execution
- **Databricks Build Pipelines:** Manage data pipeline end to end by ingestion and ETL/ELT processes on Databricks for enhancing data quality.
- **Databricks Implemented Architecture:** Led the setup of a data Lakehouse architecture on Databricks, unifying batch and streaming data sources for unified insights.
- **Databrick Unity Catalog:** Unified data governance solution.
- **Microsoft Entra ID:** For controlling access to resources.
- **Application Delivery:** Jira Jenkins, Bitbucket, Confluence, AWS Code Pipeline, AWS Code Commit, AW
- **Data Protection:** AWS Certificate Manager, AWS KMS, Snapshot Lifecycle Manager, AWS Cloud HSM,
- **Azure Identity Protection:** Detects risky sign-ins and compromised users Network VPC, VGW, TGW, CGW, IGW, NGW, etc.
- **Image & Patch:** AWS SSM Patch Manager, AWS Golden AMI Pipeline
- **AWS Platform:** AWS CloudFormation, AWS Lambda, AWS Systems Manager, S3, VPC, EC2, ELB, RDS, SNS, SQS, SES, Route53, CloudFront, Service Catalog, AWS Auto Scaling, Trusted Advisor, CloudWatch, Event Bridge, etc.
- **Identity Governance:** Manages identity lifecycles, access reviews, and privileged access.

Education:

Howard University: Chemical Engineering
Montgomery College: Associate of Science in General Engineering
The University of Maryland Global Campus: Masters in Cloud Computing Systems

Certifications :

- AWS Certified Solutions Architect – Associate
- AWS Certified Cloud Practitioner
- Azure Certified Fundamentals

Professional Experience:

Aws DevOps Engineer/Data Platform Engineer

Science Applications International Corporation (SAIC)

12/2021 – Present

Developed and leveraged baseline and custom guardrails, policies, centralized policy enforcement, tagging policies, and a well-architected multi-account environment.

- Configure and use Azure Security tools: Azure firewall, NSGs, access key and SAS key, IAM, Azure policies, resources lock, Encryption
- Use Azure Entra ID to manage and secure access for users, apps, devices, and data across any cloud or on-premises environment, enabling Zero Trust security by verifying identities and controlling access to resources
- Leverage Azure Service Principal for assigning it specific permissions (roles) on Azure resources (like a Resource Group) to follow the principal of least privilege
- Build and deploy Azure Access Connector and Databricks Storage Credentials using Terraform
- Use Azure to collaborative notebooks for data analysis, running SQL/Python/Scala/R code, and visualizing data on Databricks' unified data platform (Lakehouse)
- Define and implement cloud network architecture: Azure virtual networks, Subnet, VPN, WAN, Hub, and express route to establish connectivity between cloud resources and on-premises
- Leveraged Docker to build, test, and deploy applications in different environments.
- Automating the Azure groups configurations in Microsoft Entry using SCIM.
- Unity Catalog for Databricks to unified data governance solution that provides a centralized metastore for managing and governing data assets across multiple workspaces, clouds, and Perform security setup, networking, system backup, and patching for both Azure and on-premises environments.
- Developed baseline AWS account security, implemented/integrated end-point protection, vulnerability scanning, and intelligent threat detection.
- Built serverless architecture with Lambda integrated with SNS, CloudWatch logs, and other AWS services.
- Leveraged automated DevOps tools deployment and Blue-green deployment patterns and strategies
- Configured CI/CD Pipelines using Jenkins connected to GitHub and build environments (Dev, stage & Prod)
- Implemented IAM best practices and role-based access control
- Implemented AWS Organization to centrally manage multiple AWS accounts including consolidated billing and policy-based restrictions
- Implemented Control Tower Preventive and Detective guardrails and leveraged Account Factory, integrated with Lambda for new AWS account creation and setup.
- Set up Ansible control and slave nodes and developed playbooks to automate the configuration of servers across environments.

Aws Solution Architect

Novetta, Springfield, VA/ Accenture

01/2018 – 12/2021

- Managed provisioning of AWS infrastructures using CloudFormation
- Design for high availability and business continuity using self-healing-based architectures, fail-over routing policies, multi-AZ deployment of EC2 instances, ELB health checks, Auto Scaling, and other disaster recovery models.
- Created patch management using Systems Manager automation for multi-region and multi-account execution.
- Implemented preventive guardrails using Service Control Policies (SCPs)
- Implemented detective guardrails using Cloud Custodian policies and AWS config
- Designed and implemented for elasticity and scalability using Elasticache, CloudFront – Edge locations, RDS (read replicas, instance sizes), etc.
- Implemented security best practices in AWS including multi-factor authentication, access key rotation, encryption using KMS, firewalls- security groups and NACLs, S3 bucket policies, and ACLs, mitigating DDOS attacks, etc.
- Implemented Jenkins, GitHub, and Git for version control, code build, testing and release, and CI/CD.
- Monitored end-to-end infrastructure using CloudWatch and SNS for notification
- Used AWS system manager to automate operational tasks across AWS resources
- Maintained High Availability and disaster recovery solution for all data I was responsible for, while proactively detecting potential problems in database health before the issue arises Design and implement business continuity and disaster recovery in Azure with Azure backup services, Recovery service Vaults, and Azure site recovery Created patch management using Systems Manager automation for multi-region and multi-account execution.
- Used System Manager to automate operational tasks across WK AWS infrastructure.
- Set up AWS Single Sign On (SSO) for on-premises Active Director (AD)

- Built kinesis dashboards and applications that react to incoming data using AWS-provided SDKs; and exported data from kinesis to other AWS services including EMR for analytics, S3 for storage, Redshift for big data, and Lambda for event-driven actions.
- Security groups are configured and locked down to the various authorized subnet and IP addresses in Azure.
- Built custom images through the docker server, docker-compose with multiple local containers, and created production-grade workflows and a continuous application workflow for multiple images.
- Implemented multiple container deployments to AWS and maintained sets of containers with deployments
- Deploy and set up Databricks Warehouses and Private endpoints to enable connectivity.
- Designed secured, cost-optimized, highly available, and fault-tolerant infrastructure in AWS.
- Architected and configured Dev/Stage/QA environments in AWS (VPC, subnets, security groups, EC2 instances, load balancer, RDS, Redis, route53, etc.)
- Implemented security best practices in AWS including multi-factor authentication, access key rotation, role-based permissions, enforced strong password policy, configured security groups and NACLs, S3 bucket policies and ACLs, etc.
- Optimized cost through reserved instances, selection and changing of EC2 instance types based on resource need, S3 storage classes, and S3 lifecycle policies, leveraging Autoscaling, etc.
- Configured CloudWatch alarm rules for operational and performance metrics for our AWS resources and applications
- Backup Configure and Restore Azure Virtual Machine using Azure Backup. • Created Terraform modules to automate the provisioning of resources including Vnets, subnets, security groups, IAM roles, and Virtual Machines instances
- Monitoring from the end-to-end view of runtime systems CPU, bandwidth, disk space, and log files using New Relic
- Deployed and configured infrastructure using Terraform and Ansible
- Architected and implemented continuous integration and deployment pipelines using Jenkins and other CI

AWS ENGINEER/SYSTEM ADMIN

03/2015 – 01/2018

Edward Jones, St. Louis, MO

- Performed application installation, upgrades/patches, troubleshooting, maintenance, and monitoring of Linux servers.
- Configure Azure Storage Account, use the Azure portal, Azure CLI, or other tools to provide basic details (subscription, resource group, unique name, region, performance, redundancy).
- Configure and migrate to GitHub SaaS.
- Created, managed, and administered user account security and SSH password login.
- Deploy using Microsoft SQL Server/Azure SQL data sources for Databricks, accessed via notebooks using connectors Python libraries and managed identities for secure access Configuring Apache, NFS, FTP, and SMB
- Create users, and groups and give permissions on bare metal servers.
- Task automation, service management, and application deployment using Ansible and Jenkins
- Build and configured Linux servers from scratch with type one hypervisors for virtualization and network components
- Perform security setup, networking, system backup, and patching for both AWS and on-premises environments.
- Architect high availability environment with auto-scaling & Elastic Load Balancer
- Securely deploy MySQL Primary DB and its read replica in a private subnet with multi-AZ for disaster recovery and best practice
- Migration of high-availability web servers and databases to AWS EC2 and RDS with minimum or no downtime
- VPC build with Private and Public Subnet coupled with VPNs setup back to on-premises datacenter and cooperate offices.
- VPC peering with other Accounts allows access and routing to service and users of a separate account to communicate.
- SSL setup for Apache and Nginx applications coupled with AWS ELB SSL for all http to https thereby maximizing security.
- Network, CPU, Disk, and connectivity monitoring with CloudWatch and setup to trigger an alarm and notify system administrators.
- Aide setup for and configured for logs files detail monitoring and alerts notification when changes are made.
- Automated deployment, configuration, and security settings using Ansible.
- Experienced in GitHub (cloning a Git repository, creating a branch, pushing to Git from local, making a PR, etc.)
- Architected and implemented continuous integration and deployment pipelines using Jenkins and other CI
