

FRANK HERNANDEZ

SENIOR SOFTWARE TEST ENGINEER

 571-263-6325  frank.hernandez.p7@gmail.com  Chantilly, VA  <https://www.linkedin.com/in/michael-portillo-92316836b/>

Languages/Frameworks

- Java
- Gherkin
- SQL
- Selenium WebDriver
- BDD/TDD
- API
- ETL

Platforms

- Salesforce.com
- RMS
- OBIM
- FIMS
- Oracle EC2

Tools

- Selenium WebDriver
- Cucumber
- Jenkins
- Test&G
- Maven
- Rest-API
- Postman
- GitHub
- React.JS
- Sauce Labs

Environments

- Salesforce
- CI/CD pipelines
- Agile/Scrum

About me

I'm a results driven Software Development Engineer in Test (SDET) with a strong passion for building scalable automation solutions that enhance software quality and accelerate delivery. I specialize in developing robust test frameworks, integrating automation into CI/CD pipelines, and driving end-to-end test strategies across web, mobile, and API platforms. My approach combines technical excellence, collaboration, and continuous improvement to ensure efficient, reliable, and high-performing products.

Experience

Senior Test Engineer

February 2023 - Present

General Dynamics - Chantilly, VA

At General Dynamics, I led quality engineering efforts across **Web applications, and Angular.js web applications**, delivering seamless, scalable test automation and quality strategies that power digital experiences used by millions.

February 2024 – June 2025

- Architect and implement end-to-end **test automation frameworks** tailored for Web application and **Angular.js** web applications, ensuring rapid, high-confidence deployments.
Directed the successful migration of **1000+ test cases from excel manual testing to Automation**, streamlining regression cycles and **reducing manual testing by 40%**, Laying the groundwork for scalable test management.
- Took ownership of a **government application**, ensuring full compatibility across diverse devices.
- **Mentored junior QA engineers**, driving quality standards across the team and fostering a culture of precision, ownership, and continuous improvement.

Client: DOHS

February 2022 – February 2024

- Drove automation innovation across **2+ major projects and 15+ engineers**, scaling quality at speed through a custom hybrid framework (**Java, BDD+TDD**)

Testing Types

- UI Testing
- Regression Testing
- Smoke Testing
- Cross-Platform Testing
- API Testing
- Test Automation
- Functional test
- Sanity Testing
- End-To-End-Testing
- Compatibility Testing

Industries

- Department Of Homeland Security
- Risk Analytics
- Retail & eCommerce
- Fraud Analytics
- Event management
- Model Management Services

Personality & Strengths

- Professional Services
- Collaborative Leader
- Quality-Oriented
- Problem Solver
- Innovation-Minded
- Clinical Research
- Adaptable & Curious

- Architect and implement end-to-end **test automation frameworks** tailored for Web application and Angular.js web applications, ensuring rapid, high-confidence deployments. Directed the successful migration of **1000+ test cases from excel manual testing to Automation**, streamlining regression cycles and **reducing manual testing by 40%**, Laying the groundwork for scalable test management.
- Took ownership of a **government application**, ensuring full compatibility across diverse devices.
- **Mentored junior QA engineers**, driving quality standards across the team and fostering a culture of precision, ownership, and continuous improvement.

Sr. Software Development Engineer in Test (SDET)

February 2021 – February 2023

Fannie Mae, Reston, VA

- Implemented **test automation** to accelerate regression cycles and increase reliability across Chromium, Firefox browsers.
- Built automation pipelines integrated with **GitHub**, enabling rapid and scalable testing with minimal manual setup.
- **Designed and deployed Selenium UI test suites that slashed execution time by over 50%, boosting confidence in every release.**
- Created powerful, reusable Postman collections to enhance API coverage and catch bugs earlier in development.
- **Acted as a bridge between QA and DevOps**, improving collaboration and ensuring smooth, dependable software releases.
- Engineered Jenkins pipelines for flexible, on-demand test execution, streamlining regression cycles for multiple teams with minimal setup.

Automation Engineer in Test

April 2017 – February 2021

Sprint Wireless, Reston, VA

- Architected a next-gen automation framework combining **Behavior-Driven and Data Driven testing with Selenium WebDriver, and Cucumber eliminating legacy bottlenecks and increasing test stability across teams.**
- **Built REST API testing capabilities** from scratch, enabling earlier defect detection and expanding coverage into previously untested backend services.
- **Integrated JDBC and Apache POI libraries to automate backend** data validation and create dynamic Excel-based test reports—enhancing transparency and reporting accuracy.
- Deployed a Selenium Grid solution for distributed cross-**browser/platform** testing, significantly reducing flaky test results and manual verification.
- Launched organization-wide smoke tests for non-automated Teams drastically improving issue triage and deployment confidence.
- Provided expert QA support across departments, mentoring developers on **test automation best practices**, and helping teams resolve complex, high-priority testing challenges.
