

Gangadhar Reddy

(813)-364-4111 | gangadharm0101@gmail.com | [LinkedIn](#)

Summary

Full Stack Engineer with 5 years of experience in designing, developing, and deploying scalable software solutions across healthcare, finance, and IT consulting. Expertise in Java, Spring Boot, Python, and modern JavaScript frameworks like React and Angular. Skilled in cloud platforms (AWS, Azure), microservices architecture, and DevOps practices. Adept at driving innovation and improving system performance in Agile environments.

PROFESSIONAL EXPERIENCE

Full Stack Engineer, Capital One, Virginia, USA

Feb 2023 – Present

- Design, develop, and test RESTful APIs using Java, Spring Boot, and other relevant frameworks, including writing clean and efficient code, collaborating with cross-functional teams, and implementing API security measures.
- Use Postman/Insomnia to test and validate API endpoints, create and manage Postman/Insomnia collections and environments, develop and execute unit tests, integration tests, and end-to-end tests for Java APIs using frameworks like JUnit, TestNG, or Cucumber.
- Develop and maintain Node.js applications that interact with Java-based APIs, deploy and manage Java-based APIs on AWS platforms, and utilize AWS services to store and manage data for Java APIs.
- Implement testing maturity levels, such as TMMi, to ensure continuous testing and improvement, collaborate with QA teams to identify and prioritize testing requirements, and use testing frameworks like Selenium or Appium to automate testing for Java APIs.
- Use GitHub to manage and version control Java codebases, collaborate with team members to review and merge code changes, and implement continuous integration and continuous deployment (CI/CD) pipelines using GitHub Actions and other tools.
- Engaged in code reviews to ensure high-quality Java API development, continuously improving code performance and reliability by applying best practices. Collaborated with DevOps teams to streamline the deployment and operation of Java APIs, achieving efficient and seamless integration across environments.
- Enhanced API performance by optimizing response time by 20%, reducing latency and improving user experience.
- Led the migration of a legacy system to AWS cloud architecture, which improved system uptime and scalability by 30%.
- Collaborated with data engineers to design and implement efficient data pipelines, improving data retrieval times by 25%.

Software Engineer, Infosys, India

Feb 2019 – Dec 2021

- Delivered enterprise-grade solutions using Java 11, Spring Boot, and Angular, streamlining operational workflows for IT consulting clients.
- Automated reconciliation processes for the client, reducing manual intervention and error rates by 30%, resulting in streamlined operations and improved data accuracy across systems.
- Developed and optimized APIs to integrate IT systems, reducing data exchange latency by 25%, ensuring faster and more reliable communication between platforms.

- Created ETL pipelines using Spring Batch to automate data extraction, transformation, and loading processes, improving data flow for reporting and compliance across environments.
- Modernized legacy IT applications by migrating monolithic architectures to microservices, leveraging Azure App Services and Cosmos DB to improve scalability, maintainability, and fault tolerance.
- Enhanced the system performance by optimizing database queries, reducing response times, and implementing Redis caching to improve data retrieval speeds and system reliability.
- Automated CI/CD pipelines with GitLab CI/CD and containerized deployments using Docker and Kubernetes.
- Conducted comprehensive testing using JUnit and Selenium, achieving 95% code coverage and reducing bugs by 40%.
- Implemented real-time monitoring and logging using ELK Stack (Elasticsearch, Logstash, Kibana), reducing mean time to resolution (MTTR) for critical issues.
- Led a team in designing and developing a modular microservices-based architecture, increasing system scalability and fault tolerance.
- Optimized API performance by implementing caching strategies, improving response times by 15%.
- Collaborated with cross-functional teams to implement security best practices in API development, ensuring compliance with industry standards.

Skills

Languages: Java (8, 11, 17), JavaScript, TypeScript, Python, Node.js

Frameworks: Spring Boot, Spring Security, Hibernate, Angular, React, Django, FastAPI

Databases: MySQL, PostgreSQL, Oracle, Redis, MongoDB, Cosmos DB

Cloud: AWS (EC2, S3, RDS, Lambda, API Gateway), Azure (App Services, Blob Storage, Cosmos DB)

Messaging: Apache Kafka, RabbitMQ

Testing: JUnit, TestNG, Selenium, Postman, Cucumber, Mockito

Monitoring: ELK Stack (Elasticsearch, Logstash, Kibana), Prometheus, Grafana

DevOps: Docker, Kubernetes, GitHub Actions, Jenkins, GitLab CI/CD

Version Control: Git, GitHub, GitLab, Bitbucket

Security: OAuth 2.0, JWT, Role-Based Access Control (RBAC)

Practices: RESTful API Development, Microservices Architecture, Agile (Scrum, Kanban), (TDD)

EDUCATION

Oklahoma City University - OK, USA
Computer Science

Jan 2022 - May 2023
