

GUNA SOURAV

SOFTWARE ENGINEER

Frisco, TX | 469-403-7001 | gunasourav33@gmail.com

SUMMARY

Experienced and results-driven Cloud & DevOps Engineer with 4 years of expertise in designing, automating, and managing scalable infrastructures across AWS, Azure, and GCP. Skilled in CI/CD pipeline automation, containerization (Docker, Kubernetes), and Infrastructure as Code (Terraform, Ansible, CloudFormation) to streamline deployments and enhance system reliability. Proficient in monitoring and observability tools like Prometheus, Grafana, and ELK Stack, ensuring high availability and performance. Adept at implementing DevSecOps practices, optimizing cloud costs, and collaborating with cross-functional teams to deliver secure, efficient, and high-performing cloud solutions aligned with business objectives.

EDUCATION

Master of Science in Business Analytics

University of Texas at Dallas (UTD), USA

2024

Bachelor of Technology in Computer Science

GITAM University, India

2021

TECHNICAL SKILLS

- **Microsoft Azure:** Azure DevOps, App Services, Storage Accounts, Virtual Networks, AKS, Azure Monitor, Resource Manager (ARM), Key Vault, Load Balancer, Azure Functions, Azure Active Directory, Application Gateway
- **Amazon Web Services (AWS):** EC2, S3, IAM, VPC, CloudWatch, CloudFormation, Lambda, Route 53, RDS, Elastic Beanstalk, EKS, CloudTrail, AWS Config
- **Google Cloud Platform (GCP):** Compute Engine, Cloud Storage, Cloud Build, Kubernetes Engine (GKE), Cloud Functions, Stackdriver
- **CI/CD Tools:** Jenkins, GitLab CI/CD, Azure Pipelines, AWS CodePipeline, Maven, Gradle, Nexus, SonarQube, ArgoCD, Spinnaker
- **Containerization & Orchestration:** Docker, Kubernetes, Helm, OpenShift, Podman, Docker Swarm, ECR/ECS
- **Infrastructure as Code (IaC):** Terraform, Ansible, CloudFormation, Pulumi, ARM Templates
- **Version Control Systems:** Git, GitHub, Bitbucket, GitLab
- **Configuration Management:** Ansible, Puppet, Chef, SaltStack
- **Scripting & Programming:** Python, Bash, Shell, PowerShell, Groovy, YAML, JSON
- **Monitoring & Logging:** Prometheus, Grafana, ELK Stack, Splunk, Nagios, CloudWatch, Azure Monitor, Datadog, Zabbix
- **Operating Systems:** Linux (RHEL, CentOS, Ubuntu), Windows Server
- **Networking & Security:** DNS, VPN, Load Balancers, SSL/TLS, IAM Policies, Firewalls, Security Groups, Secret Management, Zero-Trust Architecture
- **Build & Artifact Management:** Maven, Gradle, Nexus, JFrog Artifactory
- **Databases & Storage:** MySQL, PostgreSQL, MongoDB, DynamoDB, Redis, Cassandra, Azure SQL, Amazon S3
- **Agile & DevOps Practices:** Agile/Scrum Methodologies, Sprint Planning, Continuous Integration/Deployment, Automation, Blue-Green Deployment, Canary Releases, Scalability Optimization, Release Management

EXPERIENCE

Gartner – Dallas, TX (Remote)

Sep 2023 – Present

Cloud / DevOps Engineer

- Designed and implemented AWS-based cloud infrastructure using Terraform and CloudFormation templates, reducing provisioning time by 60% and improving consistency across all environments.
- Built and optimized CI/CD pipelines with Jenkins, GitHub Actions, and ArgoCD, automating build, testing, and deployment processes to increase release velocity by 45%.
- Led containerization initiatives by migrating legacy monolithic applications into Dockerized microservices orchestrated through Kubernetes, achieving 35% better resource utilization.
- Implemented centralized monitoring solutions using Prometheus, Grafana, and the ELK Stack, enabling real-time analytics and proactive issue identification across distributed systems.
- Integrated security scanning tools like Trivy and SonarQube within CI/CD pipelines, ensuring early detection of vulnerabilities and adherence to DevSecOps best practices.
- Managed Kubernetes deployments using Helm charts for application lifecycle management and version control, supporting zero-downtime rollouts and rollbacks.
- Automated configuration management with Ansible, standardizing setup processes across development and production servers to improve consistency and minimize manual intervention.

- Collaborated with cross-functional teams to drive Agile delivery practices, ensuring efficient sprint planning, timely releases, and strong alignment with client business goals.
- Conducted cost optimization analysis on AWS resources, identifying unused assets and saving approximately 25% on monthly cloud expenditure.

MResult – Bangalore, India (Remote)

Jan 2021 – Aug 2022

DevOps / Cloud Engineer

- Deployed and maintained scalable infrastructure across AWS and Azure, utilizing EC2, S3, Lambda, and Azure DevOps services to deliver secure, high-performing applications.
- Developed and maintained Jenkins pipelines integrated with Nexus and SonarQube, reducing build time by 40% while improving overall software quality through continuous integration.
- Implemented configuration management and environment provisioning using Ansible and Puppet, minimizing manual configuration efforts and ensuring consistency across multiple environments.
- Automated system monitoring and alerting using CloudWatch, Prometheus, and Grafana dashboards, significantly improving incident response and visibility into application performance.
- Worked on Docker containerization and Kubernetes orchestration to deploy microservices, enabling high scalability, load balancing, and fault-tolerant operations.
- Supported end-to-end CI/CD pipeline integration with Git, Jenkins, and Maven, achieving seamless build and deployment processes for multiple agile teams.
- Designed infrastructure automation scripts in Python and Bash to streamline backup, user provisioning, and deployment activities, improving operational efficiency.
- Collaborated with development, QA, and operations teams to enforce Agile and DevOps standards, improving delivery timelines and code reliability across enterprise projects.
- Participated in infrastructure security audits, implementing IAM policies and role-based access control to ensure compliance with company and regulatory standards.

MResult – Bangalore, India (Remote)

Oct 2020 – Jan 2021

Data Analyst Intern

- Designed and maintained ETL pipelines using Python and SQL to extract, clean, and transform large datasets from multiple sources into data warehouses.
- Developed data ingestion workflows using Apache Airflow and AWS Glue, ensuring reliability and scalability for analytical datasets.
- Built interactive dashboards and reports using Power BI and Tableau, translating business requirements into actionable insights.
- Collaborated with data scientists to prepare high-quality datasets for predictive modeling, optimizing data quality and feature consistency.
- Automated data validation and monitoring scripts in Python, improving the accuracy and timeliness of business reporting.
- Optimized SQL queries and implemented partitioning strategies to enhance performance of large-scale analytical workloads.
- Integrated AWS S3 and Redshift for data storage and analysis, improving accessibility and reducing data retrieval time.
- Partnered with cross-functional teams to align data engineering initiatives with business KPIs and governance standards.
- Implemented version control and CI/CD for data pipelines using Git and Jenkins, ensuring reliable and repeatable deployments.
