

HAFEEZ ALI

Chicago, IL | 2243823490 | hafeez2129@gmail.com

PROFESSIONAL SUMMARY

Senior DevOps Engineer with 5+ years of progressive experience designing and operating production-scale cloud infrastructure across AWS, Azure, and GCP. Specialized in Kubernetes orchestration at 2,000+ node scale, infrastructure as code with Terraform, and CI/CD automation with GitHub Actions and Argo CD. Track record cutting commit-to-prod lead time from days to under 2 hours, driving multi-million-dollar FinOps savings, building self-healing pipelines with automated rollback and remediation, and hardening platforms to SOC 2 and PCI-DSS. Equally effective building internal developer platforms, driving SLO-based reliability practices, and implementing DevSecOps supply-chain security across distributed microservices architectures.

TECHNICAL SKILLS

- **Cloud Platforms:** AWS, EKS, ECS, EC2, Lambda, S3, IAM, RDS, VPC, CloudWatch, ECR, CodePipeline, Azure, AKS, Azure DevOps, Entra ID, Azure Monitor, Key Vault, VNet, ACR, App Gateway, GCP, GKE, Compute Engine, Cloud Operations Suite
- **Containers & Orchestration:** Kubernetes, EKS, GKE, AKS, Docker, Helm, Kustomize, Operators, controller-runtime, Crossplane
- **Infrastructure as Code:** Terraform, OpenTofu, Pulumi, Ansible, CloudFormation, ARM, Bicep
- **CI/CD & GitOps:** GitHub Actions, GitLab CI, Jenkins, Azure DevOps Pipelines, Argo CD, Flux CD, Argo Workflows, canary, progressive delivery, SonarQube, Nexus
- **DevSecOps & Supply Chain:** Sigstore, Cosign, image signing, SBOM, Syft, Snyk, Trivy, Checkov, OPA, Gatekeeper, policy-as-code, HashiCorp Vault, SOC 2, PCI-DSS
- **Observability & SRE:** Prometheus, Grafana, OpenTelemetry, Datadog, Splunk, ELK, EFK, PagerDuty, SLO/SLI design, error budgets, DORA metrics, chaos engineering
- **Platform Engineering & FinOps:** Backstage, IDP, Port, golden-path templates, self-service provisioning, Crossplane compositions, Kubecost, OpenCost
- **Networking & Service Mesh:** Cilium, eBPF, Istio, Envoy, NGINX, VPC, VNet peering, Transit Gateway, DNS, SSL/TLS
- **Programming & Scripting:** Go, Python, Bash, HCL, SQL, PowerShell, Linux, Ubuntu, RHEL
- **Databases:** PostgreSQL, MySQL, MongoDB, Cassandra

CERTIFICATIONS

- AWS Certified Solutions Architect - Associate: Amazon Web Services
- AZ-400: Designing and Implementing Microsoft DevOps Solutions: Microsoft
- AZ-204: Developing Solutions for Microsoft Azure: Microsoft

PROFESSIONAL EXPERIENCE

Capital One

Oct 2023 - Present

Senior DevOps Engineer

Chicago, IL

- Built and operated the Kubernetes platform (14 EKS clusters, 2,000+ nodes, multi-region active-active AWS) serving 200+ microservices and 150M+ daily transactions for Capital One's banking platform.
- Increased deployment frequency from biweekly to 25+ deploys/day by building GitHub Actions pipelines with parallel builds, Trivy image scanning, Cosign signing, and canary promotion gates in Argo Rollouts.
- Chose Argo CD over Flux for GitOps due to multi-cluster app-of-apps support, enabling unified progressive delivery across 14 EKS clusters and cutting deploy-time drift incidents by 60%.
- Defined SLOs, SLIs, and error budgets for 25 tier-1 services using Prometheus and Grafana, reducing customer-impacting incidents by 45% and MTTR from 38 minutes to 12 minutes.
- Built an Internal Developer Platform on Backstage with golden-path templates for service scaffolding and Terraform-based EKS/RDS provisioning, cutting onboarding from 3 weeks to 2 days.
- Selected Cilium with eBPF over Istio sidecar proxies for east-west traffic enforcement, reducing per-pod memory overhead by 40% across 2,000+ node EKS clusters.
- Slashed AWS spend by \$180K/month (32%) through Kubecost chargeback dashboards, EC2 right-sizing, Savings Plans adoption, S3 lifecycle policies, and idle-resource cleanup across 12 accounts.
- Hardened platform to SOC 2 Type II and PCI-DSS controls with OPA/Gatekeeper policy-as-code, Vault secrets rotation, Sigstore SBOM attestation, and centralized CloudWatch audit logging.
- Reduced commit-to-production lead time from 4 days to under 2 hours by consolidating legacy Jenkins pipelines into GitHub Actions with SonarQube SAST and Argo Rollouts progressive delivery.
- Instrumented distributed tracing with OpenTelemetry across 200+ microservices, correlating with Datadog APM to cut cross-service root-cause analysis from hours to under 15 minutes.

Accenture

Jan 2020 - Jul 2022

DevOps / Cloud Engineer

Atlanta, GA

- Owned cloud infrastructure delivery across 6 enterprise client engagements spanning fintech, healthcare, and retail, leading architecture reviews and stakeholder alignment with director-level client teams.
- Deployed and managed 10 AKS clusters with Azure DevOps Pipelines, Entra ID RBAC integration, and Azure Monitor alerting, supporting 80+ microservices for two financial services clients.
- Chose Terraform over ARM/Bicep for multi-cloud IaC standardization, building a shared module library across 4 delivery teams that cut Azure and GCP provisioning from 5 days to 40 minutes.

- Migrated 35 on-premises workloads to Azure and AWS via dependency mapping, phased cutover, and zero-downtime DNS-weighted traffic shifting, completing the program 3 weeks ahead of schedule.
- Built CI/CD pipelines on Azure DevOps and GitLab CI with Trivy scanning and blue-green deployments, increasing deploy frequency from monthly to 10+ per week and cutting change failure rate from 18% to 6%.
- Provisioned and operated GKE clusters on GCP with Cloud Build CI/CD and Cloud Monitoring for a retail client, managing 25+ containerized services handling peak holiday traffic.
- Reduced Azure and AWS spend by \$45K/month (28%) through Reserved Instance planning, unused disk cleanup, Blob Storage tiering, and cross-region data transfer optimization.
- Automated server configuration and patch management with Ansible across 300+ Linux and Windows nodes, cutting manual provisioning effort by 75% and ensuring CIS benchmark compliance.
- Containerized 20+ legacy Java and Python applications with Docker and Helm, integrating Snyk scanning and Azure Key Vault secrets injection into PR workflows, reducing critical CVEs by 80%.
- Implemented centralized logging with ELK Stack ingesting 500GB/day across client environments, building Kibana dashboards for real-time incident triage that cut mean time to detection to under 5 minutes.

EDUCATION

Governors State University

Master of Science, Computer Science

2022 - 2024

University Park, IL
