

HARIKA GUTTA

DEVOPS ENGINEER

682-409-1916 | harikag430@gmail.com

PROFESSIONAL SUMMARY

- Senior DevOps Engineer with 9+ years of experience designing, implementing, and managing cloud-native infrastructure, CI/CD automation, containerized application deployments, infrastructure provisioning, and enterprise DevOps solutions across healthcare, telecom, manufacturing, pharmaceutical, and financial services domains.
- Strong expertise in building scalable DevOps and cloud automation solutions using AWS, Microsoft Azure, Google Cloud Platform (GCP), Docker, Kubernetes, Jenkins, Terraform, Ansible, GitHub Actions, and cloud-native infrastructure services supporting enterprise application modernization initiatives.
- Hands-on experience implementing CI/CD pipelines, infrastructure as code (IaC), automated deployment workflows, container orchestration, cloud monitoring, and release automation processes across multi-cloud enterprise environments.
- Experienced in managing Kubernetes clusters, Docker container platforms, cloud infrastructure provisioning, server automation, configuration management, and distributed application deployments supporting high-availability enterprise systems.
- Proficient in implementing DevOps automation using Terraform, Ansible, Jenkins, GitHub Actions, Azure DevOps, and scripting technologies to improve deployment reliability, operational scalability, and infrastructure consistency.
- Skilled in cloud monitoring, incident management, production support, logging, alerting, security compliance, and operational troubleshooting using AWS CloudWatch, Azure Monitor, Prometheus, Grafana, and enterprise monitoring utilities.

TECHNICAL SKILLS

Cloud Platforms: AWS (EC2, S3, IAM, VPC, Route 53, CloudWatch, Auto Scaling, Elastic Load Balancer, Lambda, ECS, EKS, RDS, CloudFormation), Microsoft Azure (Azure Virtual Machines, Azure DevOps, Azure Kubernetes Service, Azure Monitor, Azure Active Directory, Azure Networking), Google Cloud Platform (GCP Compute Engine, GKE, Cloud Storage, Cloud Monitoring)

DevOps & CI/CD Tools: Jenkins, GitHub Actions, Azure DevOps, GitLab CI/CD, ArgoCD, SonarQube, CI/CD Pipelines, Continuous Integration, Continuous Deployment, Release Automation, Deployment Validation, Build Automation

Containerization & Orchestration: Docker, Kubernetes, Kubernetes Administration, OpenShift, Amazon EKS, Azure Kubernetes Service (AKS), Google Kubernetes Engine (GKE), Helm Charts, Container Orchestration, Container Networking, Service Discovery

Infrastructure as Code & Automation: Terraform, Ansible, Shell Scripting, Infrastructure as Code (IaC), Configuration Management, Infrastructure Provisioning, Server Automation, Deployment Automation

Monitoring & Logging Tools: AWS CloudWatch, Azure Monitor, Prometheus, Grafana Dashboards, ELK Stack, Splunk, Log Monitoring, Incident Monitoring, Operational Alerting, Performance Monitoring

Programming & Scripting Languages: Python, Shell Scripting, YAML, JSON, SQL

Version Control & Repository Management: Git, GitHub, GitLab, Bitbucket, Azure Repos

Networking & Security: IAM, RBAC, VPC, VPN, Security Groups, Load Balancing, SSL/TLS, Secrets Management, Identity & Access Management, Security Compliance

Operating Systems & Platforms: Linux, Unix, Windows Server, Ubuntu, Red Hat Linux

Build & Artifact Management: Maven, Gradle, Nexus Repository, Artifact Management

Production Support & Operations: Incident Management, Root Cause Analysis, Production Deployments, Release Management, Environment Management, Disaster Recovery Support, High Availability Support

Methodologies & Practices: Agile Methodology, Scrum, SDLC, DevOps Best Practices, Infrastructure Automation, Cloud Migration, Operational Support, Technical Documentation

PROFESSIONAL EXPERIENCE

BCBS – TOPEKA, KS

APR 2023 – PRESENT

SENIOR DEVOPS ENGINEER

PROJECT: ENTERPRISE HEALTHCARE CLOUD INFRASTRUCTURE & CI/CD AUTOMATION PLATFORM

- Designed and implemented enterprise-scale DevOps automation solutions on Microsoft Azure to support healthcare application modernization, cloud infrastructure provisioning, CI/CD automation, and secure deployment workflows across claims processing and reporting platforms.
- Built and managed CI/CD pipelines using Azure DevOps, GitHub Actions, and Jenkins to automate application builds, testing, deployment, and release management processes across multiple environments.
- Deployed and managed containerized healthcare applications using Docker and Azure Kubernetes Service (AKS), improving deployment scalability and reducing manual deployment efforts by nearly 40%.
- Automated infrastructure provisioning and environment configuration using Terraform and Ansible, enabling consistent and repeatable cloud deployments across development, staging, and production environments.
- Configured Azure networking components, load balancers, virtual machines, storage services, IAM policies, and monitoring frameworks to support secure and highly available enterprise healthcare systems.

- Implemented monitoring and alerting solutions using Azure Monitor, Prometheus, Grafana, and logging utilities to proactively identify infrastructure failures and improve operational visibility.
- Collaborated with development, QA, security, and operations teams to streamline deployment workflows and improve release reliability across enterprise healthcare applications.
- Managed Kubernetes cluster operations including scaling, pod management, ingress configuration, namespace management, and deployment troubleshooting across AKS environments.
- Developed Python and Shell automation scripts for deployment validation, server health checks, operational monitoring, and environment maintenance activities.
- Improved deployment efficiency and reduced release downtime by implementing automated rollback strategies, infrastructure automation, and standardized deployment procedures.
- Supported cloud security and compliance initiatives by implementing RBAC controls, secrets management, SSL configurations, and secure access management practices within Azure environments.
- Assisted in production support, incident management, root-cause analysis, and infrastructure troubleshooting activities for mission-critical healthcare systems.
- Maintained technical documentation for CI/CD workflows, Kubernetes deployments, cloud infrastructure configurations, operational procedures, and disaster recovery processes.
- Partnered with enterprise cloud architects and DevOps teams to modernize legacy deployment systems into scalable Azure-based cloud-native infrastructure platforms.
- Contributed to enterprise DevOps transformation initiatives by improving automation coverage, deployment reliability, operational scalability, and infrastructure stability across healthcare applications.

T-MOBILE – BELLEVUE, WA
SENIOR DEVOPS ENGINEER

FEB 2021 – MAR 2023

PROJECT: TELECOM CLOUD PLATFORM AUTOMATION & CONTAINER ORCHESTRATION SYSTEM

- Engineered enterprise DevOps and cloud automation solutions on AWS to support telecom application deployments, microservices orchestration, infrastructure scalability, and automated release management across customer analytics and operational systems.
- Designed and implemented CI/CD pipelines using Jenkins, GitHub Actions, and AWS DevOps services to automate build, testing, deployment, and rollback processes across distributed telecom applications.
- Managed containerized microservices deployments using Docker, Kubernetes, and Amazon EKS, improving deployment consistency and reducing manual operational overhead by approximately 35%.
- Automated infrastructure provisioning and configuration management using Terraform and Ansible to support scalable cloud deployments across AWS environments.
- Configured AWS infrastructure services including EC2, IAM, VPC, Auto Scaling Groups, Elastic Load Balancers, Route 53, CloudWatch, and S3 to support highly available telecom applications.
- Implemented centralized monitoring, logging, and alerting frameworks using AWS CloudWatch, Prometheus, Grafana, and ELK Stack to improve infrastructure visibility and incident response efficiency.
- Supported Kubernetes cluster administration including node management, scaling policies, ingress configuration, namespace isolation, and deployment troubleshooting within EKS environments.
- Developed Shell and Python automation scripts to streamline deployment workflows, environment setup, server monitoring, and operational maintenance activities.
- Collaborated closely with development, QA, release engineering, and operations teams to improve deployment automation and streamline software delivery pipelines.
- Optimized CI/CD workflows and deployment processes, reducing release deployment time by nearly 40% across enterprise telecom platforms.
- Supported blue-green and rolling deployment strategies to minimize application downtime and improve production deployment reliability.
- Managed artifact repositories, release packages, and environment configurations supporting enterprise application deployment and version management processes.
- Assisted in troubleshooting infrastructure failures, deployment issues, and operational incidents while coordinating root-cause analysis and remediation activities.
- Maintained DevOps documentation including deployment guides, infrastructure diagrams, Kubernetes configurations, and operational support procedures.
- Contributed to enterprise cloud modernization initiatives by improving automation coverage, deployment scalability, infrastructure resilience, and operational efficiency across telecom systems.

CATERPILLAR – MORTON, IL
DEVOPS ENGINEER

JAN 2019 – NOV 2020

PROJECT: MANUFACTURING CLOUD INFRASTRUCTURE & APPLICATION DEPLOYMENT PLATFORM

- Implemented cloud-based DevOps solutions on Google Cloud Platform (GCP) to support manufacturing application deployments, infrastructure automation, container orchestration, and operational monitoring across enterprise equipment management systems.
- Built CI/CD automation pipelines using Jenkins and GitHub to streamline application deployment, build validation, release automation, and production rollout activities.
- Managed Docker container deployments and Kubernetes orchestration using Google Kubernetes Engine (GKE) to support scalable and highly available manufacturing applications.

- Automated GCP infrastructure provisioning and configuration management using Terraform and Shell scripting across development and production environments.
- Configured GCP services including Compute Engine, Cloud Storage, Load Balancing, IAM, networking, and monitoring utilities to support enterprise manufacturing platforms.
- Implemented centralized logging and monitoring frameworks using Prometheus, Grafana, and GCP monitoring services to improve operational visibility and incident response management.
- Developed automation scripts for server provisioning, deployment validation, application monitoring, and infrastructure maintenance activities across distributed environments.
- Supported Kubernetes deployment management including pod scaling, namespace configuration, service discovery, and deployment troubleshooting within GKE clusters.
- Collaborated with development and operations teams to improve deployment reliability, release efficiency, and infrastructure scalability across manufacturing systems.
- Assisted in implementing secure deployment practices, IAM policies, SSL configurations, and access control mechanisms across cloud environments.
- Optimized deployment workflows and infrastructure provisioning activities, improving operational efficiency and reducing manual deployment efforts by nearly 30%.
- Supported production deployments, environment troubleshooting, operational monitoring, and incident resolution activities for enterprise manufacturing applications.
- Maintained infrastructure documentation, deployment procedures, CI/CD configurations, and operational support runbooks for DevOps environments.
- Assisted in cloud migration and infrastructure modernization activities supporting enterprise application scalability and operational resilience initiatives.
- Contributed to enterprise DevOps transformation efforts by improving infrastructure automation, deployment standardization, and cloud operational reliability.

NOVARTIS – FORT WORTH, TX
DEVOPS ENGINEER

Oct 2016 – DEC 2018

PROJECT: PHARMACEUTICAL APPLICATION DEPLOYMENT & CLOUD OPERATIONS PLATFORM

- Engineered enterprise-scale DevOps and cloud operations solutions on AWS to support pharmaceutical application deployments, clinical reporting platforms, healthcare analytics systems, and operational infrastructure modernization initiatives across research and healthcare environments.
- Designed and implemented CI/CD automation pipelines using Jenkins, GitHub, Maven, and AWS deployment services to streamline application build, testing, deployment, and release management workflows across multiple enterprise environments.
- Automated application deployment processes for healthcare and pharmaceutical platforms using Docker containerization technologies, significantly improving deployment consistency and reducing manual release activities across development and production systems.
- Configured and managed AWS cloud infrastructure components including EC2, IAM, S3, Route 53, Elastic Load Balancers, Auto Scaling Groups, and CloudWatch to support highly available and scalable enterprise healthcare applications.
- Automated AWS infrastructure provisioning and environment configuration using Terraform and Ansible to improve deployment consistency and reduce manual infrastructure management efforts across enterprise healthcare platforms.
- Implemented infrastructure provisioning and server configuration automation using Ansible and Shell scripting, reducing environment setup time by nearly 35% and improving infrastructure consistency across deployment environments.
- Developed reusable automation scripts for deployment validation, log monitoring, server health checks, backup verification, and operational maintenance activities supporting mission-critical pharmaceutical systems.
- Built centralized monitoring, alerting, and operational visibility solutions using AWS CloudWatch and logging frameworks to proactively detect infrastructure failures, application downtime, and performance bottlenecks across enterprise cloud environments.
- Collaborated closely with development, QA, release management, and infrastructure teams to coordinate production releases, troubleshoot deployment issues, and improve overall software delivery efficiency across healthcare platforms.
- Managed Docker-based application deployments and container lifecycle operations supporting scalable and portable deployment architectures for enterprise pharmaceutical applications.
- Supported Kubernetes-based container orchestration workflows to improve application scalability, deployment portability, and operational resilience across cloud-hosted pharmaceutical systems.
- Assisted in implementing secure cloud infrastructure configurations including IAM access controls, SSL/TLS certificates, secrets management, and compliance-driven security policies aligned with enterprise healthcare governance standards.
- Supported application deployment strategies including rolling deployments, deployment rollback procedures, environment synchronization, and release validation processes to minimize downtime during production releases.
- Optimized CI/CD workflows and deployment automation processes, reducing release deployment time by approximately 40% while improving release stability and operational reliability across enterprise systems.
- Performed root-cause analysis and operational troubleshooting for deployment failures, infrastructure incidents, server issues, and cloud service disruptions while coordinating remediation activities with engineering teams.

- Supported backup management, disaster recovery planning, and infrastructure resilience initiatives to improve business continuity and operational recovery capabilities across AWS-hosted healthcare environments.
- Maintained detailed technical documentation covering CI/CD pipelines, deployment procedures, infrastructure configurations, environment setup processes, operational runbooks, and cloud support workflows to improve onboarding and long-term maintainability.

EDUCATION

Master of Science in Computer Science

Southern Arkansas University – Magnolia, AR

Bachelor of Technology in Computer Science & Engineering

Jawaharlal Nehru Technological University Kakinada – Andhra Pradesh, India

CERTIFICATIONS

- AWS Certified DevOps Engineer – Professional
- Microsoft Certified: DevOps Engineer Expert
- Certified Kubernetes Administrator (CKA)
