

Summary

Strategic and technically proficient Data Engineer with 5+ years of end-to-end experience designing scalable data systems, optimizing ETL pipelines, and delivering actionable insights through advanced analytics and data modeling. Proven expertise in building high-performance backend services, automating data-driven workflows, and leading cross-functional initiatives across enterprise environments. Deep knowledge of cloud ecosystems (AWS), advanced SQL tuning, structured/unstructured data handling, and product-facing data strategy. Adept at balancing operational efficiency, data governance, and business alignment while enabling stakeholder teams with powerful dashboards and reporting frameworks.

Professional Experience

- Amazon – Product Analyst

July 2022 – present

 - Acted as subject matter expert (SME) for recruitment data quality, influencing key hiring product metrics across multiple markets.
 - Improved site fill rate by 53.7% by redesigning inspection logic and providing structured analysis to product managers for funnel optimization.
 - Delivered real-time insights using SQL and QuickSight, increasing visibility into product performance and reducing reporting delays by 40%.
 - Partnered with product and engineering teams to define inspection scope and logic updates, directly impacting candidate experience.
 - Built financial calculation models to assess site-level performance risk, enabling data-driven decisions across operational functions
- Amazon – Software Development Engineer (Driving Product Listings and Scalable Backend Integrations)

July 2022 – March 2024

 - Designed and deployed high-availability backend services using Java, Spring Boot, and AWS (S3, DynamoDB) to support global product listing scalability; improved backend throughput by 41% and enabled a 50% growth in international SKUs.
 - Engineered robust ingestion pipelines and integrated telemetry systems for marketplace feature logging, significantly enhancing system observability and reducing blind spots in data collection.
 - Conducted impact assessments, participated in architectural reviews, and collaborated with TPMs to align backend schema changes with evolving business requirements.
 - Drove on-call reliability metrics by responding to 70+ production incidents using CloudWatch dashboards, alarms, and root cause automation—cutting MTTD/MTTR by 30%+.
 - Acted as a cross-functional data enabler, collaborating with data scientists, UX, and analytics teams to define logging granularity, align event taxonomies, and ensure end-to-end data lineage.
 - Spearheaded a multi-region hiring funnel transformation by identifying leakage points across 20+ markets using complex SQL audits, reducing candidate drop-off by 42% and improving fill rates by 53.7%.
 - Partnered with engineering to redesign legacy pipelines into modular, reusable SQL logic—reduced dashboard render times by 62% and improved schema maintainability.
 - Implemented SLA tracking logic across hiring inspection modules and developed exception monitoring to enforce data quality and governance across dashboards.
 - Built scalable reporting infrastructure in Amazon QuickSight; automated stakeholder insights across 7 business units, reducing dependency on manual ops and saving 30+ hours/month.
 - Led sprint planning and backlog prioritization in JIRA; improved DevOps consistency by 21% and embedded metric-based sprint evaluations in stakeholder reviews.
- University of Denver – Research Assistant (Empirical Research for Human Rights + Data Visualization)

Mar 2021 – June 2022

 - Designed and managed a structured database of 500+ global human rights cases with NSF funding; integrated geographic and legal dimensions using Power BI to deliver stakeholder-specific insights.
 - Built and refined sentiment classification models and clustering logic to process unstructured narratives; accelerated manual review by 55% and introduced thematic tagging for advanced filtering.
 - Collaborated with faculty and external partners to deploy versioned SQL templates and dashboards, reducing publication turnaround time by 25%.
- CAMS Infotech Private Limited – SMO (Social Media Product Analytics + Agile Insights Integration)

May 2020 - Jan 2021

 - Engineered a scalable Python OCR pipeline (Tesseract + Regex) to extract, classify, and store product feedback from social channels—reducing manual workload by 95% and enabling near real-time analytics.
 - Developed self-service Tableau dashboards to track performance across 14 product categories, driving executive-level marketing strategy shifts and reallocating \$12K/month in budget.
 - Implemented predictive time-series modeling for sentiment forecasting, contributing to dynamic pricing strategies that improved sales by 12% for core products.
- British Council – Sales and Marketing Analyst (Web Analytics Automation + Big Data Querying)

Jan 2019 - Mar 2020

 - Queried and manipulated over 1 million records using HiveQL to model Adobe DataLayer architecture, enhancing data availability for campaign attribution analysis.
 - Automated and optimized 3+ enterprise dashboards with UNIX scripting and Tableau, reducing manual processing by 87% and increasing data visibility for senior leadership.
 - Developed proprietary logic to translate HQL to SQL, empowering analysts to access data without engineering support and reducing delivery turnaround by 60%.

Education

Master of Science, University of Denver	Jan 2021 – April 2022
Information Communication Technology	4.0 gpa

Skills

Programming & Querying: Python, Java, SQL, Scala, JavaScript
Data Engineering: ETL pipelines, Data Modeling, Logging Design, SLA Management, Governance
Data Platforms & Cloud: AWS (S3, DynamoDB, CloudWatch), Hive, MySQL, SQL Server, NoSQL
Visualization & Reporting: Tableau, Power BI, Amazon QuickSight, Microsoft Excel
Tools & Methodologies: Agile/Scrum, JIRA, Confluence, Git, Spring Boot, UNIX Shell
