

Jayesh Parmar

jayeshlparmar@gmail.com | (312) 593-4400

PROFESSIONAL SUMMARY

- Infrastructure Architect with 16+ years of experience designing and leading enterprise-scale hybrid network and cloud solutions across global data centers.
- Proven track record in modernizing infrastructure, driving cloud migrations, and delivering measurable improvements in cost efficiency, security, and performance.
- Expert in designing and implementing multi-cloud architectures across Microsoft Azure and IBM Cloud, leveraging security-driven principles to build resilient, scalable, and high-performance environments.
- Recognized for strategic leadership, cross-functional collaboration, and mentoring teams to ensure uptime, resilience, and business continuity.
- Holds advanced certifications in Microsoft Azure and Cisco, committed to continuous innovation and aligning technology with business growth.

PROFESSIONAL EXPERIENCE

- | | |
|---|--------------------|
| IBM Cloud Object Storage (ICOS) Infrastructure Architect Chicago, IL | May 2017 – Present |
|---|--------------------|
- Drove a multi-site data center migration delivering >50% annual capex savings and saving over \$1M through optimized capacity planning.
 - Designed and operated a redundant multi-provider WAN (eBGP/iBGP, RR, HA edges) for multiple ICOS DCs, achieved sub-30s failover and notable latency reduction.
 - Engineered new DCs on EVPN/VXLAN spine-leaf fabric to increase east-west throughput, resilience, and enable micro-segmentation across sites.
 - Directed firewall migration from Cisco ASA to Juniper SRX. Conducted vendor POCs, policy translated and optimized policy sets and achieved significant reduction in rule count and change lead time.
 - Architected and deployed Azure/IBM cloud solution including VNets, VPN gateways, zone-redundant workloads, load balancers, and Azure Firewall.
 - Instituted network SRE practices including telemetry, config automation/backups, failover drills, cutting MTTR and improving change success rates.
 - Established cloud governance policies using Azure Policy, RBAC and managed identities.
 - Developed and operated site-to-site IPsec VPN tunnels with BGP failover between Azure and on-prem data centers, delivering low-latency, secure, and highly available hybrid connectivity.
 - Ran scheduled vulnerability scans on routers, switches, firewalls, remediated critical/high within due date to meet IBM standards. Rolled out firmware/patch rings closing CVEs per quarter with zero unplanned outages.
 - Owned security architecture for ICOS data centers and hybrid cloud, enforcing standard practices for network segmentation, encryption in transit (IPsec/TLS), and privileged identity/access management across on-prem and cloud environments.
 - Built end-to-end IaC using Terraform for IBM Cloud/Azure VPC, VNets, subnets, NSGs, firewall policy and routing tables.
 - Implemented and operated NGFW capabilities (IPS, URL filtering, app control, malware/virus protection) and tightened outbound and east-west controls to reduce attack surface and align with corporate security standards
 - Led cross-functional efforts with DevOps teams to integrate CI/CD pipelines into secure, scalable cloud network designs, ensuring seamless phased rollouts and enhanced resilience.

- | | |
|---|---------------------|
| Gogo Network Design Engineer Chicago, IL | Jun 2015 – Apr 2017 |
|---|---------------------|
- Delivered high-availability network solutions for Gogo's complex WAN and LAN environments, ensuring 99.9% uptime and minimizing downtime by over 30%.
 - Conducted thorough Network Audits, resulting in 20% improvement in network performance and reducing latency issues by 15% through system optimizations.
 - Designed and implemented F5 Load Balancer High Availability solutions at key teleport sites, improving traffic management and increasing site redundancy by 50%, leading to more robust system reliability.
 - Successfully led onboarding and training of offshore support teams, increasing operational efficiency by 25%, while reducing incident response times by 50%.
 - Authored detailed network engineering documentation, reducing troubleshooting time and enhancing team collaboration, resulting in more streamlined operations.
 - Provided expert technical guidance to engineering and product teams on secure architecture patterns, integrating security by design into new and existing solutions.
 - Partnered with cross-functional teams and the NOC to deliver highly available network designs, reducing outages and enhancing disaster recovery capabilities.

Cambium Networks Inc. (Formerly Motorola Inc.) | Sr. System/Network Engineer | Chicago, IL Mar 2005 – May 2015

- Integrated and tested Motorola's Canopy Wireless Broadband products, achieving 100% customer acceptance and completing system testing 10% faster than the average project timeline.
- Developed technical designs for ePMP/PMP320 product lines, implementing security and networking protocols, resulting in a 30% reduction in network vulnerabilities and improving overall system robustness.
- Designed VoIP testbeds and conducted extensive testing, improving product quality and reducing post-launch defects by 60%, leading to enhanced customer satisfaction.
- Delivered over 50 product demos and held technical seminars at 5 international locations, increasing product adoption rates by 25%.
- Led end-to-end system troubleshooting efforts, reducing resolution times by 40% during on-site engagements, resulting in faster issue resolution and improved client relationships
- Conducted protocol testing, ensuring 99.9% functional stability and optimal voice quality for Motorola's Seamless Mobility WLAN/GSM system, enhancing user experience.
- Implemented and managed complex LANs, reducing network downtime by 20% and improving product development efficiency by 15% using advanced networking tools like Wireshark and AiroPeek.

EDUCATION AND CERTIFICATIONS

- | | |
|--|---|
| • DePaul University Chicago, IL
Master of Science in Telecommunications | • Microsoft Azure Fundamentals
Certification ID: 235AET-9D33CA |
| • Mumbai University Mumbai, India
Bachelor of Engineering in Electronics | • Cisco Certified Network Associate (CCNA)
Certification ID: CSC010974498 |
| | • MS Azure Network Engineer Associate
Certification ID: F5BB56-AC0432 |

CORE COMPETENCIES

- | | | |
|-------------------------|-------------------------|-----------------------------|
| • Cloud Architecture | • SD-WAN | • Infrastructure Automation |
| • Network Modernization | • Network Security | • Disaster Recovery |
| • Azure Infrastructure | • Data Center Migration | • Cost Optimization |
| • Cybersecurity | • Virtualization | • Technical Leadership |

KEY SKILLS

- **Networking:** SD-WAN, BGP, OSPF, EIGRP, RIP, MPLS (L2/L3 VPN), QoS, DNS, NAT/PAT, HSRP/VRRP, VLAN/Q-in-Q, VXLAN/EVPN, VRF, PBR, IPv6, SAN
- **Protocols:** TCP/IP, UDP, ICMP, SNMP, RTP, SIP, SSH
- **Cloud Platforms:** Microsoft Azure, AWS, GCP, IBM Cloud
- **Security & Compliance:** Threat Modeling, Zero Trust, EDR, SIEM/SOAR (Qradar), Nessus, CIS Benchmarks
- **Monitoring/Tools:** SolarWinds, ELK, Grafana, Wireshark, AiroPeek, Azure monitor
- **Hardware:** Cisco, Juniper, Vyatta, Mikrotik, Palo Alto
- **Automation:** Ansible, Terraform
- **Operating Systems and Virtualization:** Windows Server, RHEL/CentOS, Ubuntu, macOS, VMware ESXi/vCenter
- **Defect Tracking:** ServiceNow, JIRA, Spiceworks
- **Scripting:** Python, PowerShell, Bash, Perl
- **Traffic Generator:** IxLoad, IxChariot
- **Load Balancer:** F5, HAProxy, NGINX

AWARDS AND ACHIEVEMENTS

- **CEO Quality Award** | Motorola, 2006
- **Bravo Award** for VoIP Test Bed Implementation | Motorola, 2010
- **Bravo Award** for On-Site Customer Support | Motorola, 2014
- **CEO Award** | Gogo, 2016
