

JAYJEETSINH RAYJADA | DATA ANALYST

IL, USA | +1 (224) 300 1130 | jayjeetsinhrayjada18@gmail.com | [LinkedIn](#)

PROFESSIONAL SUMMARY

Data Analyst / Analytics Engineer with **6+ years of global experience** across **Healthcare, Financial Services, and FMCG** sectors. Specialized in bridging business logic with modern data stack architecture—transforming raw transactional data into clean, modeled, and tested data models using **dbt, SQL, Snowflake/BigQuery, and BI platforms**. Proven track record of optimizing data warehouse performance, reducing query costs by up to 35%, building self-service analytics frameworks, and delivering high-impact executive dashboards that drive multi-million-dollar operational efficiencies.

EDUCATION & CERTIFICATIONS

Master of Business Administration (MBA), Emphasis in Analytics

Webster University, MO, USA

June 2024 – March 2026

Certifications: Power BI Dashboard, Tableau Data science, ML Professional, Data engineer Professional

TECHNICAL SKILLS

- **Data Modeling & Analytics Engineering:** dbt (Core/Cloud), Star & Snowflake Schemas, Data Vault 2.0, Dimensional Modeling, Kimball Methodology, CI/CD for Data Pipelines.
- **Data Warehousing & Databases:** Snowflake, Google BigQuery, PostgreSQL, MS SQL Server, Amazon Redshift.
- **Languages & Querying:** SQL (Advanced Window Functions, CTEs, Query Optimization), Python (Pandas, NumPy, Scikit-learn), PySpark.
- **BI & Data Visualization:** Tableau, Power BI, Looker, ThoughtSpot, Automated Reporting.
- **Data Governance & Quality:** Great Expectations, dbt-tests, Data Lineage, Schema Validation, HIPAA/FINRA Data Compliance.
- **Version Control & Orchestration:** Git, GitHub, Airflow, Dagster, JIRA, Agile/Scrum.

WORK EXPERIENCE

Data Analyst & Analytics Engineer (Contract) | United Healthcare, USA

April 2026 – Present

- Architect and maintain **dbt semantic layers** and **Snowflake dimensional data models** for patient journey analytics, processing 3M+ daily claims and EHR records under strict HIPAA compliance.
- Redesigned legacy, unoptimized SQL views into modular dbt models with incremental materialization, reducing average dashboard refresh times from **45 minutes to under 15 minutes** (65% improvement).
- Implemented automated dbt data quality tests (uniqueness, referential integrity, null checks) and alert systems via Slack/PagerDuty, reducing data quality incidents in executive reporting by **25-35%**.
- Developed interactive Power BI dashboards tracking patient readmission metrics and operational resource utilization, enabling clinical directors to identify bottleneck trends and reduce emergency department wait times by **10%**.
- Collaborated with data engineers and compliance leads to establish column-level masking and role-based access control (RBAC) across 80+ Snowflake tables containing sensitive PII/PHI.

Data & Analytics Engineer | Muthoot Fincorp Limited, India

April 2021 – May 2024

- Led the analytics engineering efforts for the risk and fraud department, transforming 100GB+ daily transaction streams into analytics-ready data marts using **BigQuery, dbt, and Airflow**.
- Designed and deployed a unified **Customer 360 star-schema model** serving 25+ business users and 6 cross-functional analytics teams, eliminating multi-department metric discrepancies by **100%**.
- Optimized high-volume query logic and partitioned large tables, cutting monthly cloud data warehousing expenditures by **\$12,000 (20% cost reduction)** without loss of query performance.
- Partnered with Risk Analysts to build an automated Fraud Detection KPI dashboard in Looker, leading to a **18% increase in early-stage fraudulent transaction flagging** (\$500K saved annually).
- Mentored 4 junior analysts on Git workflows, dbt documentation standards, and advanced SQL analytical functions.

Data Analyst | Bisleri, India

February 2018 – March 2021

- Analyzed sales, inventory, and trade promotion performance data across 12,000+ retail distribution nodes using SQL, Python, and Tableau.
- Built a daily **Trade Promotion Effectiveness Matrix** that evaluated \$5M+ in promotional spend, allowing marketing leadership to reallocate underperforming budgets and boost net ROI by **8-10%**.
- Streamlined monthly sales reporting processes by replacing manual Excel-driven workflows with automated SQL scripts and interactive Tableau dashboards, saving **25-30+ hours of manual effort per month**.
- Conducted market basket analysis using Python (Mlxtend/Apriori) to discover cross-selling product associations, driving a **5% uplift in average basket value** for targeted regional campaigns.
- Partnered with supply chain teams to track out-of-stock (OOS) frequencies, creating daily automated alerts that reduced retail stockouts by **10-12%**.

ACADEMIC PROJECTS

1. Early-Stage Multi-Modal Cancer Risk Detection & Stratification Engine

- **Objective:** Built an end-to-end clinical analytics pipeline that combines electronic health records (EHR) with genomic biomarker features to flag high-risk oncology candidates early.
- **Technical Execution:** Utilized Python (Pandas, Scikit-learn, XGBoost) to clean, impute, and feature-engineer 100K-250K anonymized clinical records. Built predictive models achieving an **85.4% ROC-AUC score** in stratifying stage-I risk factors.
- **Analytics Layer:** Modeled outputs in Snowflake using dbt to transform raw prediction scores into a clinically usable Tableau dashboard, giving researchers drill-down capability into patient risk tiers by demographic and biomarker variables.

2. Autonomous Supply Chain Dynamic Safety Stock & Demand Analytics Engine

- **Objective:** Engineered an end-to-end supply chain decision-engine to solve inventory bullwhip effects across multi-tier distribution networks during demand volatility.
- **Technical Execution:** Modeled historical purchase orders, lead times, and supplier performance metrics using PostgreSQL and dbt. Applied time-series forecasting (Prophet / Python) to predict regional demand spikes.
- **Business Impact Model:** Calculated optimal dynamic safety-stock levels per SKU, demonstrating a simulated **18% reduction in holding costs** and a **23% reduction in backorder delays** across 350+ simulated nodes.
