SUMMARY

Software and AI Engineer with 3+ years of experience architecting scalable distributed systems and deploying AI-driven enterprise applications. Proven expertise in building high-availability cloud-native microservices (Java, Spring Boot, Node.js, FastAPI) and high-throughput event pipelines (Kafka, Kubernetes, AWS) to support millions of daily workflows. Adept at bridging traditional backend architecture with generative AI by designing RAG pipelines, integrating multi-agent orchestration, and securely embedding LLMs to automate operations and drive measurable business outcomes.

SKILLS

Languages: Java, Python, JavaScript, TypeScript, C/C++, SQL, HTML

Frameworks: Spring, Spring Boot, FastAPI, Spring MVC, Node.js, Django, Flask, Hibernate, JPA, REST, WebSockets, Apache Kafka, React.js, Tailwind CSS

Databases, Caching: PostgreSQL, MySQL, MongoDB, Redis, Vector Databases (Pinecone, pgvector, Milvus, FAISS)

Cloud, DevOps, Infra: AWS (EC2, RDS, S3, EKS, Lambda, SageMaker, SQS, Elasticsearch, OpenSearch, SNS, Bedrock, CloudWatch, CloudFormation, DynamoDB), Azure, GCP, Docker, Kubernetes, Terraform, CI/CD, GitHub Actions, Jenkins

AI, Machine Learning & Data: PyTorch, TensorFlow, Scikit-learn, Pandas, NumPy, PySpark, Ray, Apache Airflow, MLflow, Hugging Face Transformers, LangChain, LangGraph, Retrieval Augmented Generation, Model Context Protocol, OpenAI API, Claude

Miscellaneous: JUnit, Mockito, pytest, JMeter, OpenTelemetry, Grafana, Prometheus, Git, GitHub, Bitbucket, Jira, Linux

EDUCATION

Master of Science in Computer Science

California State University Long Beach, CA, USA

Aug 2024 - May 2026

GPA: 3.9

Bachelor of Technology in Computer Science

MIT World Peace University, India

Aug 2019 - May 2023

GPA: 9.37

EXPERIENCE

ServiceNow, CA | Software Engineer

September 2025 - Present

- Engineered high-volume, **distributed microservices** for Now Platform using **Java, Spring Boot**, and **gRPC**, enabling 99.99% platform availability and supporting **10M+** daily enterprise workflows.
- Designed high-throughput **Kafka** pipeline, streaming **millions of events per sec**, cutting asynchronous processing **latency by 35%** and mitigating consumer lag by tuning partition strategies, consumer concurrency, and batch fetch sizes.
- Scaled massive **MySQL** deployments and implemented **Redis** caching across **Linux** server clusters, driving **40%** reduction in DB load and lowering p95 API response times to **under 150ms** via indexing and connection pooling.
- Engineered **RAG** pipelines for enterprise IT ticket summarization using Python, **LangChain**, and Pinecone, driving a **25% MTTR reduction**. Integrated **LangSmith** for comprehensive AI observability and continuous evals to ensure context faithfulness.
- Architected **multi-agent workflows** utilizing **LangGraph** for advanced agent orchestration, enabling enterprise LLMs to autonomously triage, diagnose, and resolve complex IT service requests.
- Implemented tool calling via **MCP** servers, enforcing RBAC and platform guardrails to allow models to safely execute core APIs in production.

Neon IT Systems, India | Software Engineer 2

June 2023 – July 2024

- Architected a highly scalable **Node.js** and **TypeScript** backend layer alongside **Java** and **Spring Boot** microservices for an order capture system, combining **GraphQL** and **Kafka** to reliably process **10,000+ events per second**.
- Managed a containerized **Kubernetes** fleet on **AWS EKS** via **Terraform**, configuring DNS routing, application load balancing, and Horizontal Pod Autoscaling to absorb 3x traffic spikes with zero downtime.
- Instrumented full-stack observability using **Prometheus** and **Grafana** to pinpoint system bottlenecks, driving a **40%** reduction in p99 **PostgreSQL** query latency by implementing table partitioning and optimistic locking.
- Orchestrated CI/CD pipelines using **GitHub Actions** and **Docker** container builds, cutting deployment failures by 40% and reducing manual deployment times by 50%.
- Mentored 3 junior engineers** through pair programming and rigorous code reviews, enforcing SOLID design principles and maintaining a strict 90%+ test coverage standard using JUnit and Mockito.

Neon IT Systems, India | Full-Stack Software Engineer

January 2022 – May 2023

- Leveraged **Node.js**, **TypeScript** and **FastAPI** to architect a decoupled microservices infrastructure spanning core APIs and ML inference.
- Reduced **MongoDB** query times by 50% for millions of documents using compound indexing, aggregate pipelines and horizontal sharding.
- Developed responsive **React**, JavaScript and Next.js UIs, integrating secure **RESTful APIs** with **OAuth2** and **JWT** based role-based access control.
- Automated CI/CD workflows using Jenkins and custom Bash scripts to build and deploy containerized services on **AWS ECS** with **EC2** instances.
- Leveraged Apache **Spark**, **Airflow** and Amazon S3 to automate large-scale data pipelines and reduce manual data-ingestion overhead by 35%.
- Orchestrated asynchronous ML pipelines across **Azure** and **GCP** using Airflow and **Tensorflow Extended**, integrating **MLflow** to track versions and accelerate model deployments.
