
PROFESSIONAL SUMMARY

Business Data Analyst with 7+ years of experience delivering analytics, BI reporting, dashboard development, and data driven insights across banking, insurance, healthcare, and e-commerce domains. Proficient in SQL, Python, Power BI, Tableau, Power Query, and Power Automate with hands-on experience across AWS and Azure cloud platforms. Proven ability to translate complex business requirements into clear reporting solutions, automate workflows, and present findings to executive stakeholders in a way that drives business decisions. Hands-on experience in enterprise data governance working across data quality, CDE onboarding, Colibra, and Consent Order compliance.

TECHNICAL SKILLS

Languages & Querying:	SQL (Advanced — CTEs, Window Functions, Query Tuning), Python, Python Scripting, Hive, Spark SQL, Microsoft Access, Git
BI & Visualization:	Power BI (DAX, Calculated Columns, Row-Level Security, Power BI Service), Tableau, Amazon QuickSight, Qlik Sense, QlikView, SSRS, KPI Dashboards, Scorecards, Executive Reporting, Dimensional Data Modeling
Power Platform:	Power BI, Power Query, Power Automate, Advanced Excel (Pivot Tables, VLOOKUP/XLOOKUP), Microsoft Lists
Analytics:	Exploratory Data Analysis (EDA), Statistical Analysis, Root Cause Analysis, Trend Analysis, Predictive Analytics, Anomaly Detection, Ad Hoc Analysis, AI-Assisted Analytics, Reporting Automation, Business Storytelling
Data Management:	Data Profiling, Data Validation, Data Reconciliation, Data Cleansing, Data Quality, ETL Pipelines, dbt (Data Build Tool), Data Warehousing, UAT Testing
Cloud & Databases:	AWS (S3, Redshift), Azure (SQL, Data Lake, Data Factory, Databricks), Snowflake, SQL Server, SSIS, Spark, Hadoop
Data Governance:	CDE Onboarding, Colibra, Metadata Management, Data Lineage, Data Stewardship, PII Governance, Consent Order Compliance, Regulatory Reporting
Delivery:	Agile / Scrum, Jira, UAT, Business Requirements Gathering, Stakeholder Management, Workshop Facilitation, Process Improvement, Cross-Functional Collaboration

PROFESSIONAL EXPERIENCE

Business Data Analyst | Citi — Irving, TX | Nov 2024 – Present

- Designed and delivered **executive-level KPI dashboards and operational scorecards** using Tableau and Amazon QuickSight for Risk and Finance teams, enabling senior leadership to monitor reporting exceptions, regulatory thresholds, and performance trends in real time.
- Wrote complex **SQL queries** using CTEs, window functions, and joins across AWS, Hive, and SQL Server regularly pulled, cleaned, and reshaped large datasets to answer business questions and keep dashboards running accurately.
- Performed **quantitative analysis and root cause analysis** using SQL, Hive, and CitiHawk Data Workbench tracked down upstream data issues, worked with engineering teams to fix them, and summarized findings for business leadership.

- Used **AI-assisted analytics and generative AI tools** to speed up exploratory analysis, detect anomalies faster, and summarize data findings helping the team move quicker on ad hoc requests and recurring reporting tasks.
- Automated recurring **reporting, reconciliation, and validation workflows** using SQL, Python, Power Automate, and Power Query reducing manual reporting effort by 40% and improving turnaround time for operations teams.
- Maintained **data governance standards** including CDE onboarding, Collibra metadata updates, Consent Order controls, and PII classification kept documentation current and ensured reporting datasets were always audit-ready.
- Executed **Maker-Checker validation and production staging checks** for Data Quality rules and reporting controls verified rule logic and pipeline outputs in pre-production before each release to make sure nothing broke in production.
- Conducted **data profiling on enterprise datasets** to check **completeness, accuracy, and consistency** before data entered reporting workflows documented findings and flagged issues to the relevant teams for resolution.
- Performed **UAT for new reports and dashboard changes** tested logic, checked outputs against expected results, flagged issues before they reached production, and signed off on readiness in coordination with business owners and the QA team.
- Gathered and organized **production evidence for governance controls and reporting deployments** put together documentation packages with validation results, screenshots, and sign-off records to support audit reviews and Consent Order requirements.
- Worked with large enterprise datasets integrated from **CRM, operational, and reporting systems** to support pipeline monitoring, reporting analysis, and business performance tracking.
- Worked closely with **Risk, Finance, and Operations teams** to understand their reporting needs, gather data requirements, and build analytical solutions that gave business stakeholders clear, reliable answers to their day-to-day questions.

Data Analyst | USAA — San Antonio, TX | Oct 2022 – Nov 2024

- Built and maintained **interactive Power BI dashboards and BI reports** integrating data from Azure SQL, Azure Data Lake, and enterprise insurance systems, wrote DAX measures and calculated columns, applied row-level security, and published reports to Power BI Service for member services, claims, and operations leadership.
- Developed **Power Query transformation and cleansing models** to consolidate and standardize datasets from disparate source systems reducing monthly reporting cycle time by **30%** and improving report reliability across the analytics team.
- Designed **ETL pipelines** using Azure Data Factory, Databricks, and SSIS to automate data ingestion and transformation workflows ensuring timely, accurate data availability for downstream reporting and analytics consumption.
- Performed **in-depth quantitative analysis and EDA** on member, claims, and financial datasets developing scenario-based assumptions, identifying reporting gaps, and delivering forward looking insights that supported strategic planning and business decision-making.
- Leveraged **Snowflake and dimensional data modeling** (star schema) to structure insurance datasets for scalable self-serve analytics improving query performance and reducing ad hoc turnaround time for business stakeholders.
- Wrote and optimized **complex SQL queries** against Azure SQL and Snowflake environments performing data extraction, transformation, and aggregation across large-scale insurance datasets to support recurring and ad hoc reporting needs.
- Partnered with **cross-functional teams** including business analysts, product owners, and claims operations to gather reporting requirements and translate complex insurance business logic into structured, scalable BI solutions using Agile/Scrum delivery.
- Prepared and presented **data-driven business reports and PowerPoint summaries** for senior leadership and business stakeholders, translated insurance analytics findings into clear visuals and narratives that made it easier for non-technical teams to act on the data.
- Supported **UAT validation and post-release reporting reviews**, ensuring Power BI solutions and data pipelines met business acceptance criteria and performed reliably in production environments.

- Analyzed **claims data, member risk profiles, and loss ratio trends** to surface anomalies and potential fraud patterns delivering actionable insights that supported underwriting decisions and operational risk management across insurance business units.

Associate Data Analyst | Amazon — Hyderabad, India | Sep 2019 – Aug 2021

- Analyzed fulfillment center and supply chain datasets using **SQL, Python, Amazon Redshift, and Amazon S3** delivering SLA performance tracking, shipment trend reporting, and operational productivity analysis for logistics and warehouse operations teams.
- Built **KPI dashboards and operational performance reports** tracking shipment volumes, fulfillment rates, productivity metrics, and SLA compliance enabling data-driven decisions for warehouse and logistics leadership.
- Automated recurring **SQL and Excel based reporting workflows**, standardizing daily and weekly operational reports, reducing manual effort and improving reporting consistency across fulfillment teams.
- Performed **trend analysis, statistical data validation, and ad hoc analysis** on large-scale operational datasets detecting anomalies, identifying fulfillment gaps, and surfacing process improvement opportunities for operations and planning teams.
- Wrote optimized **SQL queries on Amazon Redshift and S3** to extract and aggregate operational data from large, distributed datasets, supporting cloud-based reporting and analytics workflows.
- Prepared **structured analytical summaries and written data narratives** for operations and logistics leadership translating complex fulfillment and supply chain findings into clear, decision ready insights that directly supported inventory planning and warehouse strategy.

Junior Data Analyst | Molina Healthcare (Infosys) — Hyderabad, India | Mar 2018 – Sep 2019

- Supported healthcare reporting and compliance analytics through **SQL-based data extraction, cleansing, transformation, and validation**, preparing datasets for operational reporting and regulatory compliance activities across Molina's managed care programs.
- Developed reports and operational dashboards using **SSRS, QlikView, Qlik Sense, and Excel** for clinical operations, finance, and business leadership improving data visibility and standardizing reporting outputs across teams.
- Performed **data profiling, validation, and reconciliation** to identify data anomalies, quality gaps, and reporting inconsistencies documenting findings and coordinating with upstream teams to resolve issues and improve dataset reliability.
- Assisted with **reporting automation and dashboard enhancement** initiatives, gathering requirements from business users and translating them into structured reporting solutions that reduced manual workload for the analytics team.
- Supported **HEDIS reporting, member eligibility validation, and encounter data analysis** coordinating with clinical and operations teams to ensure analytical outputs met healthcare compliance standards and regulatory reporting requirements across Molina's managed care programs.

EDUCATION

Master of Science — Computer Science & Information Technology | Sacred Heart University, 2022

Bachelor of Science — Computer Science | Osmania University, 2018
