SUMMARY

Data Analyst with expertise in data analytics, business intelligence, and reporting solutions that turn complex data into meaningful business insights. Skilled in SQL, Python, Power BI, Tableau, Excel, and Google Big Query, with experience analyzing large datasets, developing interactive dashboards, and automating reporting workflows. Strong background in data validation, reporting accuracy, and process improvement, with the ability to translate business requirements into reliable analytics solutions that support operational performance and strategic decision-making.

TECHNICAL SKILLS

- Programming & Data Technologies: SQL (Advanced), Python (Pandas, NumPy), PySpark, Google BigQuery, ETL Development, Data Extraction, Data Transformation
 - Business Intelligence & Visualization: Power BI, Tableau, SSRS, Alteryx, Microsoft Excel (Advanced, Power Query, DAX, Pivot Tables)
 - Analytics & Reporting: Data Analysis, Business Intelligence, Dashboard Development, Data Visualization, Reporting Automation, Data Validation, Data Quality, Trend Analysis, Predictive Analytics, Operational Reporting
 - Cloud & Database Technologies: Google Cloud Platform (GCP), Relational Databases, SQL Server
 - Healthcare Domain: Claims Processing, Provider Data Management, Risk Adjustment (RAF/HCC), HEDIS, CMS STAR Ratings, HIPAA, HL7, FHIR, ICD-10, CPT, Epic, Cerner
-

PROFESSIONAL EXPERIENCE

Sutherland Healthcare (client: CVS Health) | Dallas, TX

provider data analyst/management specialist | January 2026 – Present

- Develop and maintain interactive Power BI dashboards, reports, and datasets to monitor operational performance and support business decision-making.
- Write complex SQL queries to extract, transform, and analyze provider, claims, and member data from multiple data sources.
- Automate recurring reporting and data preparation workflows using Python (Pandas, NumPy) and SQL, reducing manual effort and improving reporting efficiency.
- Perform data validation, reconciliation, and quality assurance to ensure reporting accuracy, consistency, and compliance with data governance standards.
- Analyze operational trends, KPIs, and business metrics to identify improvement opportunities and deliver actionable insights.
- Partner with business stakeholders to gather reporting requirements and develop dashboards and analytics solutions aligned with business objectives.
- Prepare and transform datasets for enterprise reporting while supporting data integration and improving overall data quality.
- Create standardized reporting templates and documentation to streamline reporting processes and support consistent data governance practices.
- Utilize advanced Microsoft Excel (Pivot Tables, Power Query, XLOOKUP/VLOOKUP) to perform ad hoc analysis and support business reporting.
- Collaborate with cross-functional teams in an Agile environment to troubleshoot reporting issues, optimize reporting processes, and communicate analytical findings to technical and non-technical stakeholders.

HCA Healthcare Inc. | Dallas, TX

Data Analyst | June 2025 – December 2025

- Analyzed clinical claims and operational datasets using SQL and Python to identify care gaps, utilization patterns, and readmission trends, supporting initiatives that reduced avoidable hospitalizations by 12%.
- Designed and implemented automated ETL pipelines using GCP and PySpark, reducing record processing time by 40% and improving data availability for reporting.
- Maintained and validated enterprise reporting workflows for HEDIS quality reporting and CMS STAR Ratings, ensuring 99.5% data integrity across reporting datasets.
- Built interactive dashboards and reports using Power BI to monitor operational performance, quality metrics, and key performance indicators for business stakeholders.

- Performed data validation, reconciliation, and quality assurance to improve reporting accuracy and ensure consistency across multiple healthcare data sources.
- Partnered with business and technical teams to gather reporting requirements, translate business needs into analytical solutions, and deliver executive-ready dashboards and summaries.
- Applied statistical analysis and trend reporting to identify performance improvement opportunities and support value-based care initiatives.
- Collaborated with cross-functional teams in an Agile environment using Jira to manage project deliverables, resolve reporting issues, and support ad hoc analytical requests.

Pal Tech | Hyderabad, India

Data Analyst | July 2022 – May 2023

- **Data Maintenance:** Organized, documented, and maintained large-scale operational datasets from multiple business areas using SQL and cloud storage infrastructures.
 - **Automated Solutions:** Automated manual reporting workflows by designing SQL stored procedures, views, and triggers, reducing manual effort by 50% and improving reporting timeline reliability.
 - **Anomalies & Trends:** Applied statistical analysis in Python to isolate data anomalies, identify operational trends, and deliver data-informed recommendations for revenue optimization.
 - **BI Dashboards:** Created and maintained structured BI reporting solutions in Tableau and Power BI, providing real-time visibility into operational performance metrics for internal departments.
-

EDUCATION

Master of Science in Data Analytics

University of North Texas, Denton, TX | August 2023 – May 2025
