SUMMARY

- 1. Salesforce Certified Developer/Admin with over 4 years of experience in Salesforce Lightning Sales and Service Cloud, specializing in Sales Planning and Management.
- 2. Professional in Salesforce.com, and customization: Force.com, Lightning Web Components, Apex, and Web Services.
- 3. Troubleshoot and resolved defects for releases and production while leveraging best practices to enhance system productivity and scalability.
- 4. Enhanced Salesforce apps with cross-functional Scrum teams in iterative releases. Passionate about learning new tools while working in Agile Environment. Absolutely a team player.

TECHNICAL SKILLS

Salesforce Cloud

Lightning Sales Cloud and Service Cloud

1. Development

- a. Backend Development Skills - Developed and maintained custom business logic via following,
 - i. Apex | Apex Classes | Apex Triggers | Async Apex | Invocable Apex
 - ii. Apex Based Unit testing | Apex Test classes
 - iii. SOQL | SOSL | DML
 - iv. REST API | JSON | XML | Web Services
 - v. Salesforce REST API
- b. Front Development Skills - Developed and maintained custom user interfaces via following,
 - i. Lightning Web Components
 - ii. HTML | CSS | Java Script |Salesforce Lightning Design System
 - iii. Screen Flows
- c. Low Code Tools
 - i. Record Triggered Flows | Auto launched Flows | Scheduled Flows
 - ii. Process Builder | Workflow Rules
 - iii. Approval Process

5. Administration

- a. Salesforce Administration | Data Model | Sharing Model
- b. Reports & Dashboards

- 6. **Data Migration Tools** | Data Loader | Data Migration Wizard | Workbench
- 7. **Development Tools** | Developer Console | VS Code | Postman | Workbench
- 8. **Deployment Tools** | Change Sets | Workbench
- 9. **Project Management Tools** | Jira

Soft Skills | Positive Team Player | Strong problem-solving skill| Grate communication skills|strong work ethics.

CERTIFICATIONS

- **Salesforce Certified Administrator**
- **Salesforce Certified Platform Developer I**

EDUCATION

- **Bachelor of Arts in Finance**
International Turkmen Turkish University – Ashgabat Capital of Turkmenistan

WORK HISTORY

- Some Course – Information Technology
Harper College – Palatine, IL

Walmart

Salesforce Developer | Contract, Remote

11/2022 - PRESENT

- Designed, developed UI customization by building dynamic, responsive, streamlined interfaces by creating optimized custom LWCs solutions to enhance user experience and contribute to their productivity. Applying modular design with its reusable components to optimize my custom solution.
- Used Force.com Web services API, and Integrated SF with external third party tools, external systems using REST APIs. I have worked with departments outside of Sales, Service Cloud. **While working on my prioritized Sales Cloud task, the Finance team needed real-time payment accuracy for reporting. Instead of manual updates, they required an automated solution where Salesforce would send payment data. By attending their meetings, listened to their pain points, I recommended and developed an Apex-based REST API integration solution that triggered whenever a payment record was approved in Salesforce. The integration that I build automatically sent the relevant payment details to the Finance system, and based on their system's response, my custom solution updated the payment status in Salesforce. So, this my optimized custom integration solution ensured accurate data exchange, eliminated manual updates, and improved reporting accuracy.**
- Created future methods, batchable, and queueable classes achieved to solve, handle bulk data, complex requirements. With async processing approach for making callout to handle large transaction volume better because of its flexible, advance future allows easier error management, its capability for job chaining, monitoring, higher governor limits without being stuck in salesforce's transaction limits during execution.
- Developed apex test classes for unit testing, integration testing to make sure if my optimized solution works as expected, reliable, and deliver scalable high quality software product. Achieve code coverage more than 90%.
- Automated business repeated workflows, reduce manual input, or send notification message to their client through configuration by replacing redundant automation with well structured, optimized, streamlined Record triggered Flows. Created Approval Process as part of automation to send an automated email to notify the right people.
- Well versed with Agile Methodology of Software Development Lifecycle SDLC.

SOFT INNOVAS

Salesforce Admin/ Developer | Contract, Remote

09/2020 to 10/2022

- Build data models creating custom objects and fields, and defining relationships between objects based on business requirements.
- Implemented and maintained user interfaces via Page layouts, Lightning Record Pages, Dynamic Actions.
- Designed, and maintained Security Model to protect data and ensure compliance by configuring user access controls to ensure appropriate profiles, roles, public groups, and permission sets for some specific standard, and some custom objects. Implemented field-level security to ensure that sensitive data, such as customer records, was accessible only to authorized users.
- Configured sharing settings for record-level access by setting OWD to private to restrict access to sensitive customer data, thus ensuring compliance with data privacy regulations and safeguarding customer information. Extending access with sharing rules for example: I created owner base sharing rule to allow sales representative to have access to the record that owned Manager for temporary time.
- Developed and maintained validation rules, to maintain data integrity and prevented invalid bad data entry in the business's Salesforce system. Created duplicate rules for data sanity.
- Configured custom user interfaces via screen flows to enhance user experience.
- Designed and developing well structured, optimized SOQL queries not hit governor limits and minimize memory usage, improved performance by processing only relevant data in APEX classes, Triggers and async apex for business requirements. Bulkified SOQL, DML operations by using collections for data manipulation and functional needs in application.
- Experience in troubleshooting Flows, Apex Classes.
- By gathering with Business stakeholders created reports via standard and custom report types and dashboards for their data visualization.
