PROFESSIONAL SUMMARY

Results-driven QA Software Engineer with 8+ years of experience delivering high-quality software across finance and healthcare domains in the United States. Expert in test automation (Selenium WebDriver, TestNG, JUnit, Cucumber/BDD), API testing (Postman, RestAssured), performance testing (JMeter), and SQL-based backend validation. Proven track record of designing scalable, data-driven automation frameworks integrated into Jenkins CI/CD pipelines using Docker and Kubernetes. Experienced in Agile/Scrum environments with a shift-left testing mindset, reducing regression cycle time by up to 50% and lowering defect-escape rates across banking and healthcare platforms. Adept at leveraging GenAI tools (GitHub Copilot, ChatGPT) to accelerate test design and coverage analysis while upholding enterprise-grade engineering standards.

CORE COMPETENCIES

Test Automation | Manual & Functional Testing | Regression Testing | System & Integration Testing | UAT | API Testing | Performance Testing | BDD/TDD | CI/CD Pipeline Integration | Defect Lifecycle Management | Test Case Design | Database Validation | Shift-Left Testing | Cross-Browser Testing | Microservices Testing | Risk-Based Testing | Agile/Scrum | Requirements Traceability

TECHNICAL SKILLS

Test Automation: Selenium WebDriver, TestNG, JUnit, Cucumber (BDD), Maven, POM, Data-Driven & Hybrid Frameworks

API Testing: Postman, RestAssured, Swagger; REST & SOAP API validation

Performance Testing: Apache JMeter — load, stress, and spike testing on microservices

Programming Languages: Java (Primary), SQL (Primary); Python, C#, Bash (Working and Academic)

Databases: PostgreSQL, MySQL; complex SQL queries, JDBC-based backend validation

DevOps & CI/CD: Jenkins, Git, GitHub, Docker (containerized test execution), Kubernetes-based CI environments

Cross-Browser & Cloud Testing: Sauce Labs, Selenium Grid, BrowserStack

Test Management: Jira, Azure DevOps, Xray, Zephyr; Requirements Traceability Matrix (RTM); Agile/Scrum

GenAI in QA: GitHub Copilot, ChatGPT, Gemini — test design, code refactoring, and coverage gap analysis

PROFESSIONAL EXPERIENCE

QA Software Engineer

Oct 2023 – Mar 2026

Wells Fargo | Charlotte, NC (Hybrid)

- Architected and implemented data-driven test automation frameworks using Selenium WebDriver, Java, TestNG, JUnit, and Cucumber (BDD), reducing regression cycle time by 40% and enabling continuous quality delivery
- Designed and automated 200+ API test validations using Postman and RestAssured, enforcing contract testing across microservices and detecting integration defects 30% earlier in the SDLC
- Performed comprehensive SQL and JDBC-based backend data validation on financial transaction systems, ensuring data integrity and catching 95% of critical data inconsistencies before production release
- Led JMeter performance and load testing on banking microservices, identifying bottlenecks and driving a 35% improvement in system response times under peak transaction loads
- Integrated automated test suites into Jenkins CI/CD pipelines using Docker containerization, reducing end-to-end validation time by 50% and enabling zero-touch regression on every code commit
- Championed shift-left testing practices within Agile/Scrum ceremonies, collaborating with developers during sprint planning to embed quality gates early and increase overall testing efficiency by 20%
- Leveraged GenAI tools (GitHub Copilot, ChatGPT) to accelerate test script generation, code refactoring, and coverage gap analysis while maintaining full engineering ownership and compliance with enterprise security standards

QA Engineer

Apr 2021 – Jul 2023

Alliance Health | Morrisville, NC (Remote)

- Developed and executed manual and automated test cases across critical healthcare insurance workflows — life, disability, dental, vision, and supplemental health — increasing functional test coverage by 40%
- Built and maintained Postman and RestAssured API automation suites for healthcare service APIs, reducing manual validation effort by 60% and accelerating release cycles
- Authored complex SQL queries for backend data validation, identifying 30+ critical data defects in underwriting and claims processing workflows prior to each release
- Performed cross-browser compatibility testing (Chrome, Firefox, Edge) using Selenium Grid, reducing UI defect escape rate by 25% across patient-facing and admin portals
- Maintained a comprehensive Requirements Traceability Matrix (RTM), ensuring 100% test coverage of business requirements across five insurance product lines
- Collaborated with business analysts and developers in Agile sprint reviews and retrospectives to refine acceptance criteria and strengthen defect resolution workflows

Junior QA Engineer

Jul 2018 – Dec 2020

Transfotech Global Corp. | Manhattan, NY (Remote)

- Transitioned into a QA engineering role following successful completion of an intensive hands-on QA bootcamp, and applied skills directly to real-world functional and automation testing projects
- Designed and executed functional, regression, and smoke test cases for web applications, contributing to measurable reductions in pre-release defect escape rates
- Built foundational Java and Selenium WebDriver automation scripts, reducing repetitive manual test effort and supporting the team's shift toward an automation-first approach
- Participated in Agile/Scrum ceremonies including sprint planning, daily standups, and retrospectives; tracked and reported defects through full lifecycle using Jira

EDUCATION

Associate in Applied Science — Software Development

Apr 2023

Durham Technical Community College | Durham, NC

MBA in Finance

2013

Stamford University | Dhaka, Bangladesh

Finance background established a strong foundation in business requirements analysis, risk management, and regulatory compliance — directly applicable to QA work in banking and healthcare domains.

PROFESSIONAL TRAINING

QA Software Engineering Bootcamp

2018

Transfotech Academy | United States

- Completed an intensive, hands-on QA engineering program covering manual testing, Selenium WebDriver automation, Java, SQL database testing, API testing with Postman, Git/GitHub version control, and Agile/Scrum methodologies
- Worked on projects simulating real-world applications — performing end-to-end functional, regression, API, database validation, and cross-browser testing across multiple environments
- Supplemented formal training with self-directed study through Udemy and LinkedIn Learning, focusing on Java automation frameworks, API automation, and CI/CD integration practices

Career Note: Transitioned from Finance (MBA) into Software QA Engineering through structured bootcamp training and self-directed learning, demonstrating strong initiative, adaptability, and commitment to technical excellence.

CERTIFICATIONS

- MTA: Software Development Fundamentals — Microsoft
- App Development with Swift Associate — Apple
- Full Stack Web Development — Tech I.S
- ISTQB Certified Tester Foundation Level (CTFL) — In Progress
