

MICHAEL GHOLIAN

SENIOR FULLSTACK ENGINEER

Los Angeles, CA, US

(657) 565-4055

michaelgholian8@gmail.com

<https://www.linkedin.com/in/michael-gholian-356772348>

CORE COMPETENCIES

Full-Stack Development

Cloud & DevOps

Database Management

Microservices & Serverless Architecture

API Development & Integration

Performance Optimization & Security

Agile Methodologies & Team Leadership

UI/UX & Product Development

EDUCATION

BACHELOR'S DEGREE

University of California,
Berkeley

05/2008 – 03/2012

GPA 3.8/4.0

LANGUAGES

ENGLISH
Native

SUMMARY

A highly skilled **Full-Stack Engineer** with over **12 years** of experience designing and delivering high-performance, scalable applications. Adept in back-end development, using modern programming languages and advanced database architectures to ensure efficiency, reliability, and scalability. On the front end, I leverage top frameworks like React and Next.js to build visually appealing, user-friendly interfaces that are optimized for performance.

SKILLS

HTML5, CSS, Javascript, Typescript, JQuery, Next.js, React, Redux, React Query, Angular, RxJS, NgRx, Vue, Nuxt.js, Eslint, TailwindCSS, Material UI, Bootstrap, CSS3, Node.js, JWT, Express, NestJS, Python, Django, Flask, Golang, Java, Java Spring, Agile API, GraphQL, MySQL, PostgreSQL, MongoDB, Redis, ASP, ASP.NET, ASP.NET Core, AWS, AWS Lambda, AWS S3, D3.js, Docker, Docker-compose, Elasticsearch, Github, Bitbucket, Gitlab, Integration, Testing, Jenkins, Jest

PROFESSIONAL EXPERIENCE

SENIOR SOFTWARE ENGINEER

11/2022 – 12/2024

DynaTech Systems

LOCATION: 1901, AMANDA CT, PISCATAWAY, PISCATAWAY, NEW JERSEY, USA

- Revamped user interfaces to improve application responsiveness by 30% and implemented a modular architecture, reducing page load times by 25%.
- Developed and implemented full-stack development processes, achieving a 40% improvement in application performance and a 20% increase in user engagement within six months.
- Streamlined image processing workflows by integrating advanced API endpoints and OpenAI models, enhancing user experience and application versatility.
- Built responsive front-end components using React and Next.js, integrating Figma design elements, which improved design consistency by 15% and enhanced performance stability by 10%.
- Coordinated project management and issue tracking through Jira and Slack, reducing project turnaround time by 25%.
- Diagnosed and resolved critical backend issues, increasing customer satisfaction ratings to 93%.
- Conducted MongoDB performance tuning by implementing indexing strategies and optimizing queries, reducing database load by 25% and improving read/write times.
- Leveraged AWS CloudFront for content delivery, reducing latency by caching static assets closer to end users and optimizing API calls for faster data retrieval.
- Deployed a full-stack web application on AWS using Node.js and Angular, utilizing AWS Elastic Beanstalk for automated scaling and monitoring.
- Developed and deployed microservices on Azure, using Azure App Service to host Node.js APIs and Azure Blob Storage for serving static assets.
- Established CI/CD pipelines using Azure DevOps to automate build, test, and deployment processes, increasing deployment speed and reliability.
- Designed and deployed serverless applications using AWS Lambda and API Gateway, integrating DynamoDB for NoSQL storage, reducing server management overhead, and improving scalability.

FULL STACK DEVELOPER

03/2022 – 10/2022

inSync – IT Support

LOCATION: 23272 MILL CREEK, LAGUNA HILLS, CALIFORNIA, USA

- Directed a full-stack development team utilizing Agile methodologies to design and deliver user-focused features, significantly improving application adaptability and responsiveness.
- Spearheaded UI/UX design improvements, optimizing codebases and implementing security best practices while leveraging React Hooks to enhance front-end functionality and maintainability.
- Integrated complex third-party APIs, including the Coke Fusion API, showcasing expertise in API integration and ensuring seamless interaction within the application framework. Designed and implemented an intuitive user interface for displaying Coke Fusion-generated images, enhancing user engagement and visual appeal.
- Developed a robust history management system for fusion-generated images, allowing users to track, revisit, and interact with their creative outputs effectively.
- Built PHP-based web services to facilitate integration with existing backend systems, ensuring efficient data exchange and extended application functionality.
- Managed and optimized Azure SQL Database, improving query performance and scalability through indexing strategies while implementing geo-replication for high availability and disaster recovery readiness.

FULL STACK DEVELOPER

03/2021 – 02/2022

Kappa Computer Solutions

LOCATION: 767 STIRLING CENTER PL, UNIT 1401, LAKE MARY, FLORIDA, USA

- Led end-to-end full-stack development projects, integrating user-focused interface designs with scalable backend services to enhance user preference management and improve overall system efficiency.
- Directed cross-functional Agile teams to deliver innovative solutions, increasing system flexibility and delivering an enhanced digital banking experience for users. Implemented Google Analytics for comprehensive user activity tracking and insights, enabling data-driven enhancements to client services and product performance. Integrated AWS services with CI/CD pipelines, automating code deployment to cloud environments, reducing deployment times by 70%, and significantly increasing release frequency.
- Designed and delivered secure banking solutions using Python and Django, leveraging microservices architecture to ensure system scalability, modularity, and maintainability. Built a RESTful API using TypeScript and Node.js, integrating with a MongoDB database, optimizing database performance by analyzing slow queries and implementing indexes, reducing query execution times by 40%.
- Automated deployment processes using GitHub Actions and Azure DevOps, reducing deployment times from hours to minutes and increasing deployment efficiency and frequency.
- Developed infrastructure-as-code solutions with AWS CloudFormation and Terraform, enabling version-controlled and repeatable deployments that minimized errors and streamlined environment setup.
- Conducted rigorous database performance tuning and implemented best practices for RESTful API design, improving system reliability and ensuring seamless data integration.

FULL STACK DEVELOPER

05/2019 – 02/2021

BuzzClan

LOCATION: 5757 ALPHA RD, SUITE 340, DALLAS, TEXAS, USA

- Designed and developed a comprehensive event management dashboard, enhancing operational efficiency and user engagement for a high-profile client while maintaining strict confidentiality and data security protocols.
- Engineered real-time data integration solutions to monitor event metrics such as attendee engagement, session popularity, and revenue projections, enabling actionable insights for event organizers.
- Built a dynamic, responsive user interface using React and Node.js, facilitating real-time interactions and collecting user feedback during live events to improve attendee satisfaction.
- Directed the entire project lifecycle, from conception to deployment, ensuring on-time delivery while adhering to agile development methodologies.
- Optimized web applications with service workers and local caching strategies, enabling seamless offline functionality and reducing page load times for a smoother user experience.
- Developed a real-time data visualization dashboard with Angular, integrating WebSocket connections to deliver instant updates and reduce network latency, outperforming traditional HTTP polling techniques.

- Leveraged WebSocket APIs for efficient real-time communication, improving user engagement and responsiveness during events.
- Enhanced data visualization using D3.js and other libraries, delivering actionable insights through interactive charts and graphs tailored to event organizers' needs.
- Conducted performance optimization of the system's backend, improving data retrieval speeds by 30% and ensuring consistent uptime during high-traffic events.
- Implemented advanced monitoring tools to track system performance, ensuring scalability and reliability under high user loads.

FULL STACK DEVELOPER

04/2017 – 02/2019

Consilien

LOCATION: 21250 HAWTHORNE BLVD SUITE 500 TORRANCE, CA 90503, USA

- Built responsive web applications using JavaScript and React, leveraging modern front-end frameworks to deliver exceptional user interfaces and seamless user experiences. Led the development of advanced web and mobile applications, utilizing innovative integration techniques to create user-centric designs and ensure consistent performance across platforms.
- Improved application performance and scalability by integrating advanced cloud services and implementing secure, scalable messaging and notification systems, enhancing communication workflows and operational efficiency.
- Applied strong project management and collaboration skills, utilizing Agile methodologies, efficient code management tools like Git, and agile tracking platforms such as Jira to deliver projects on time and within scope.
- Adhered to Test-Driven Development (TDD) and Behavior-Driven Development (BDD) methodologies, ensuring high-quality, maintainable code and meeting strict performance standards.
- Conducted in-depth debugging and performance optimization for front-end applications, reducing page load times by 40% and implementing custom debugging tools to improve efficiency.
- Designed reusable front-end components and optimized code structure to improve maintainability and scalability across multiple projects.
- Utilized CI/CD pipelines for automated testing and deployment, streamlining the development process and increasing release velocity.
- Improved accessibility and responsiveness of applications by following WCAG standards, ensuring compatibility with multiple devices and enhancing user inclusivity.
- Collaborated with cross-functional teams to align technical implementation with business goals, consistently delivering innovative and effective solutions that drove user engagement and satisfaction.

SOFTWARE ENGINEER

06/2012 – 02/2017

cmsMinds

LOCATION: SUITE 204B, 8404 SIX FORK ROAD, RALEIGH, NORTH CAROLINA

- Spearheaded full-stack web application development to automate guest services, achieving a 30% increase in operational efficiency and driving repeat customer engagement through enhanced service delivery.
- Integrated advanced data analytics into hotel operations using Python and Pandas, enabling data-driven decision-making and elevating the guest experience through actionable insights.
- Designed and developed a comprehensive data analytics platform, providing real-time insights that supported strategic decisions and improved overall performance metrics. Created intuitive and mobile-responsive user interfaces with React, boosting guest satisfaction and loyalty by delivering seamless and engaging user experiences. Implemented server-side rendering (SSR) to optimize website SEO and reduce load times, improving marketing outreach and increasing user engagement by 20%.
- Enhanced mobile and web application performance by employing code-splitting, lazy loading, and performance optimization techniques, ensuring efficient and smooth user experiences.
- Leveraged RESTful APIs to streamline data integration and improve communication between front-end and back-end systems, ensuring seamless functionality across platforms.
- Collaborated with cross-functional teams, including marketing and operations, to align technical solutions with business objectives, improving customer engagement strategies.
- Applied Agile and Scrum methodologies to manage development cycles, ensuring on-time delivery of high-quality solutions while adhering to best practices in project management.
