Dear Hiring Manager,

I am a Data Analyst with 5+ years of experience delivering business intelligence, operational reporting, and data analytics solutions across banking, healthcare, and insurance. My experience combines strong SQL and Python development with dashboard creation, ETL validation, data reconciliation, reporting automation, and cross-functional collaboration. I enjoy translating complex data into accurate, actionable insights that help business teams make better day-to-day and strategic decisions.

In my current role as a Data Analyst at Jack Henry, I partner with Digital Banking, Payment Operations, Finance, Fraud, and Product teams to translate business requirements into SQL-based analytical solutions. I develop and maintain Power BI dashboards monitoring transaction volumes, success rates, settlement performance, customer adoption, and operational KPIs. I also develop complex T-SQL queries, stored procedures, CTEs, and window functions across SQL Server and Azure SQL Database. Through automated reconciliation, data-quality validation, and reporting automation, I have helped reduce manual reporting effort by **35% across four functional teams** while improving reporting accuracy and providing faster visibility into operational performance.

Previously, I worked in healthcare and insurance analytics, supporting quality, population health, clinical operations, underwriting, account management, and claims teams. At Zing Health, I developed Power BI dashboards and SQL reporting datasets for member enrollment, provider performance, care management, and HEDIS quality metrics. At The Plexus Groupe, I supported insurance portfolio and client performance analytics through SQL reporting solutions, Power BI dashboards, and data-quality validation. Earlier at NextGen Healthcare, I developed operational dashboards and reporting solutions that reduced weekly report preparation by **2–3 hours** and improved visibility into clinic and provider performance.

My technical background includes **SQL, T-SQL, Python, Power BI, DAX, Power Query, Tableau, Looker, Excel, SQL Server, Azure SQL Database, Snowflake, PostgreSQL, Redshift, BigQuery, Azure Data Factory, SSIS, dbt, AWS S3, and Apache Airflow**. I have hands-on experience with complex SQL queries, CTEs, window functions, stored procedures, query optimization, ETL validation, data profiling, reconciliation, root-cause analysis, KPI reporting, anomaly detection, and statistical analysis. I also use Python libraries including Pandas, NumPy, and Scikit-learn for trend analysis, forecasting, and analytical modeling.

I hold a **Master of Science in Information Systems from the University of Texas at Arlington** and a **Bachelor of Technology in Instrumentation and Control from Manipal Institute of Technology**. My academic background, combined with professional experience across multiple industries, has strengthened my ability to approach business problems from both technical and analytical perspectives.

I am interested in opportunities where I can apply my analytical and technical skills to meaningful business challenges, collaborate with cross-functional teams, and contribute to data-driven

decision-making. I value organizations that encourage continuous learning, thoughtful problem-solving, and the practical use of data to improve business outcomes. I would welcome the opportunity to bring my experience in analytics, reporting, automation, and business intelligence to a team where I can contribute and continue to grow professionally.

Thank you for your time and consideration. I look forward to the opportunity to discuss how my background and experience can contribute to your organization.

Sincerely,

**Mrinal Reddy**
