

Mukesh Kumar Punna

Chicago, IL | 9044792646 | punnamukesh6@gmail.com | [LinkedIn](#)

Professional Summary

Senior Data Analyst with 6+ years of experience in healthcare and insurance analytics, specializing in data cleaning, validation, SQL analysis, and KPI reporting. Skilled in SQL, Python, Excel, Power BI, and Tableau, with experience analyzing claims, enrollment, policy, and provider data from multiple sources. Delivers accurate dashboards and actionable insights for stakeholders through strong analytical and problem-solving skills.

Technical Skills

- **Programming Languages:** SQL, Python, Pandas, NumPy
- **Data Visualization & Reporting:** Power BI, Tableau, Excel
- **Data Platforms & Warehousing:** SQL Server, Azure Synapse, Teradata, Relational Databases
- **Cloud Technologies:** Microsoft Azure (Data Factory, Synapse Analytics), AWS (EC2, S3), Google Cloud Platform, ETL/Data Pipelines
- **Analytics & Data Processing:** Data Cleaning, Data Modeling, Data Validation, EDA, KPI Tracking, Statistics
- **Insurance Domain Expertise:** Policy, Claims Processing, Risk Modeling, Fraud Detection, Customer Retention
- **Methodologies:** Agile, Scrum
- **Tools & Collaboration:** Git, Jira
- **Healthcare Domain Expertise:** Claims Data, Member Enrollment, Provider Data, ICD Codes, CPT/HCPCS, DRG, NPI, CMS Reporting, Medicare/Medicaid

Work Experience

Humana | *Senior Data Analyst*

Jan 2025 - Present

- Analyzed large-scale healthcare datasets including claims, enrollment, and provider data to identify cost drivers and utilization trends.
- Designed and owned Power BI dashboards tracking KPIs such as total claim cost (UPB), member population, and risk scores, used by business stakeholders for decision-making.
- Conducted high-cost patient analysis using ICD and CPT codes to identify treatment cost patterns, supporting cost optimization initiatives.
- Developed and optimized complex SQL queries across relational databases in SQL Server and Azure Synapse, improving query performance and reducing report generation time by ~30%.
- Performed statistical analysis with Python (Pandas, NumPy) to detect anomalies, trends, and correlations in healthcare datasets, supporting fraud-detection efforts and improving data-quality monitoring.
- Supported risk and cost prediction initiatives by analyzing historical claims and member data, improving forecasting accuracy.
- Evaluated provider network performance by analyzing utilization and cost efficiency metrics.
- Generated CMS-compliant reports in Excel and Jira, applying fraud-detection checks to ensure regulatory adherence.
- Conducted data validation and reconciliation across claims, member, and provider datasets, improving reporting accuracy.
- Automated reporting workflows and dashboards, reducing manual effort and improving turnaround time.
- Presented analytical insights using SQL and Excel to stakeholders, enabling more informed decisions that improved care-management efficiency and helped control costs

Statefarm | *Data Analyst*

Jul 2019 - Aug 2022

- Analyzed large-scale insurance datasets across claims, underwriting, and policy systems to identify risk patterns and support pricing strategies.
- Developed Tableau dashboards to track KPIs such as claim frequency, loss ratios, fraud indicators, and customer retention metrics.
- Wrote complex SQL queries in Teradata to extract and transform datasets from multiple systems including claims and policy data.
- Conducted fraud detection analysis using SQL and Python (Pandas), identifying duplicate claims and abnormal patterns, reducing financial risk exposure.
- Performed risk analysis by evaluating historical claims data and identifying high-risk customer segments.
- Analyzed claims lifecycle data to identify bottlenecks, improving processing efficiency by ~15%.
- Conducted customer retention analysis by evaluating churn and renewal trends, supporting targeted retention strategies.
- Built automated reporting solutions, reducing manual reporting effort by ~25%.
- Ensured data quality by validating and reconciling data across multiple systems, which increased overall data accuracy and reduced downstream errors
- Delivered insights that supported fraud detection improvements and risk assessment strategies.

CVS Health | *Data Analyst*

Jan 2017 - Jun 2019

- Analyzed Healthcare claims and member datasets using Python and Azure Synapse to identify utilization trends, helping the team prioritize high-impact services
- Developed Tableau dashboards and Excel reports that tracked claim volume and service utilization KPIs, enabling managers to monitor performance and make data-driven decisions
- Wrote SQL queries in Azure Synapse to extract and analyze data for business reports, providing insights that guided operational improvements
- Performed data validation through Python scripts and ETL/data pipelines in Azure Data Factory to ensure consistency across claims and billing datasets, reducing data errors.
- Performed data analysis using Python (Pandas) for cleaning, transformation, and trend identification in healthcare datasets, uncovering patterns that informed enrollment strategies
- Analyzed patient behavior patterns using Python and Azure Synapse Analytics, building data models that informed targeted engagement strategies and helped increase service-delivery efficiency
- Identified high-cost patients and abnormal claim trends with Azure Data Factory pipelines and data-modeling techniques, providing actionable insights that supported cost-control initiatives and reduced unnecessary expenditures
- Supported healthcare operations by mapping claims-processing workflows in Azure, pinpointing bottlenecks and recommending process changes that streamlined operations and cut processing time
- Delivered reports and insights that improved reporting accuracy and operational visibility.

Education Details

St.Francis college, New York. | *Master of Science, Computer Science*

New York Jan 2022 - Dec 2024

JNTUH University. | *Bachelors of Technology, Computer Science*

Jul 2012 - May 2016
