

Nagarjunareddy Guntaka

arjunreddy9551422@gmail.com | +1-415-335-5257 | linkedin.com/in/nagarjuna-guntaka-dev | github.com/Nagarjuna278

SKILLS

Programming Languages	Go (Golang), Python, C/C++, JavaScript
Frontend Development	React.js, HTML5, CSS3
Backend & API Development	Microservices Architecture, RESTful APIs, gRPC, Express.js, Twelve-Factor App Principles, Linux, MacOS, Windows, SpringBoot
Cloud Platforms & DevOps	Google Cloud Platform (GCP): GKE, Cloud SQL, Compute Engine, Cloud Build (CI/CD), Cloud Operations Suite (Logging, Monitoring, Trace), Cloud DNS, Cloud Load Balancing, Cloud Armor, IAM, Google Cloud Migrate, DevOps Practices: Infrastructure as Code (Terraform), Docker, Kubernetes (K8s), CI/CD Pipeline Automation, Git, Calico
Databases & Caching	PostgreSQL, MongoDB, Redis Enterprise, TimescaleDB, Cloud SQL, In-Memory Caching (Go sync.RWMutex)
Messaging & Data Streaming	Apache Kafka, RabbitMQ
Tools & Libraries (Go)	go-redis/redis, confluent-kafka-go, uber-go/zap, jung-kurt/gofpdf, Go Standard Library (net/http, sync)
ML & Data Science	Multi Agent Reinforcement Learning, Robotics/Simulations, Fine-Tuning LLMs, BERT, Transformers, PyTorch, Pandas

EXPERIENCE

Les Schwab - Remote, US

Software Engineer | Feb'24 - Present

- Engineered and deployed a Go-based routing agent powered by LLMs for customer support tickets, resulting in a 40% reduction in ticket closure time, leveraging gRPC for optimized service communication.
- Architected highly-scalable data ingestion pipelines using Go to collect and manage user engagement events, deploying the service using Docker on Kubernetes (GKE) with autoscaling to handle traffic spikes of up to 500%.
- Developed and managed Go-based Kubernetes controllers, leveraging gRPC and RESTful APIs to seamlessly bridge on-premises shared services with Google Kubernetes Engine (GKE), achieving a 20% reduction in latency for scalable operations.
- Fine-tuned a Generative AI model for customer support message automation using Python and FastAPI, featuring both a high-performance gRPC API and a flexible RESTful API for real-time inference, improving response time by 15% and enhancing client application integration.

Hexagon - India

Software Engineer | Aug'22 - Jan'23

- Contributed to building an event-driven data analytics platform, developing RESTful APIs and integrating backend services using Go for real-time user data processing.
- Designed and implemented Go microservices that communicated via Apache Kafka, improving report delivery speed to users by optimizing data streaming and processing.
- Analyzed the performance of core data services with Go's pprof tool, refactoring concurrency patterns to increase system throughput and reduce CPU usage, enhancing the platform's efficiency and scalability.

Cognizant - India

Software Developer | Mar'21 - Jul'22

- Contributed to the re-architecture of a client application, consolidating a multi-service model into a single, scalable Go microservice with a flexible DynamoDB backend, reducing the codebase by over 60% and cutting deployment time by 30%.
- Assisted in the cloud-native deployment of a new microservice on GKE, containerizing the service with Docker, writing Kubernetes manifests, and configuring auto-scaling rules, enabling dynamic scaling and high availability.
- Developed and executed a comprehensive data migration plan, writing Go scripts with validation logic to move data from multiple SQL databases into a single NoSQL instance, achieving zero data loss and resulting in a 20% improvement in query performance.

PROJECTS

High-Performance Event Analytics System | Go, gRPC, Kafka, TimescaleDB

- Built a scalable real-time analytics platform with Go, Kafka, and TimescaleDB, achieving a 40% improvement in query performance for efficient event streaming.

Distributed Raft-Consensus Key-Value Store | Go, gRPC, Protobuf

- Built a highly-available (99.99%) and strongly consistent distributed Key-Value database using Go, implementing the Raft consensus algorithm from scratch, ensuring fault tolerance and data integrity.

EDUCATION

San Francisco State University

Master of Science, Computer Science | GPA: 3.7/4.0

Relevant Coursework: Advanced Algorithms, Software Engineering, Internet Application Design and Development, Artificial Intelligence, Pattern Analysis and Machine Intelligence, Advanced Computer Networks, Advanced Network Security

CERTIFICATIONS & ACTIVITIES

Google Cloud Certified - Associate Cloud Engineer

JHUB Cyber Security Hackathon Champion

San Francisco State University's Engineering Students Advisory Board's Professional Outchair
