PROFILE

Software QA Engineer with 7 years of experience in designing, developing and implementing test solutions for high scale products. Responsible for handling software build certification and owning software releases to around 300M Fire TV devices globally. Strive to incorporate shift left strategy while working on service side API testing and contributing to continuous deployment. Actively participate in all stages of software development life cycle in an agile platform from inception to delivery.

SKILLS

- QA Technical skills: Design test plan, Enumerate test cases, Define test execution strategy, Track defect through its life cycle
- Areas of Testing: Functional testing, API testing, End To End testing, Performance Testing, Usability Testing
- Types of Testing: Black box testing, Grey box testing, A/B Testing, Beta testing, Automation
- QA Tools: JIRA, Test Rail, Kibana and in-house tools for pipeline deployments, customer feedback analyzer
- Programming languages: Java, Python, Shell scripting

PROFESSIONAL EXPERIENCE

Quality Assurance Engineer at Amazon from January 2017 - February 2024

- Lead multiple software releases for Fire TVs core application and responsible for testing and releasing new features on 300M+ Fire TV devices. Engage in release management activities from the beginning and keep stakeholders up to date.
- Develop test solutions by understanding the product and service architecture. Create test plan documents, enumerate test cases and define test execution strategy for complex features. Increase software delivery speed, maximize team efficiency and product test coverage by defining the scope and release criteria while factoring in dependencies, impact, risks and mitigations. Triage bugs through its life cycle while holding the ground for critical and blocker bug fixes on time.
- Work with cross platform teams on complex features, define and evangelize processes to achieve and maintain high quality standards and aim to deliver bug-free features to customers.
- Partake in QA On Call rotations, assist in debugging issues and reproduce them. Expedite hot fixes for high severity issues. Maintain the health of CI/CD pipelines and contribute to shift left strategy through automating test cases in Python based test framework using Android compatibility testing model.
- Design and develop automation frameworks and tools to automate test cases to validate end-to-end functionality of Alexa Information domain services while focusing on code readability, reusability and scalability to expand testing across multiple languages and devices. Used Java based test framework to build scalable testing solution with large scale test data.
- Participate in test plan reviews, automation framework design reviews and code reviews. Engage in collaborative work with peers to formulate better testing strategies and exchange views through knowledge sharing sessions.
- Participate and organize Beta testing and bug bash to collect critical feedback on the pre-released features and prioritize issues with product team and debug issues with the development team.

EDUCATION

- Master of Science in Computer Science from California State University, East Bay September 2014 - March 2016
- Bachelor of Engineering Computer Science from Visvesvaraya Technological University September 2007 - July 2011
